This note examines the impact of measurable and unmeasurable (not correlated with observed aggregates) information on secondary market LDC loan prices. The Institutional Investor country risk ratings are used to construct a proxy for the non-quantifiable information that moves debt market values. Regression results indicate that market participants use both macroeconomic aggregates and unmeasurable information to price LDC loans. This implies that price changes unrelated to observables need not raise concerns regarding price reliability, and, in fact, such price movements may well be conveying important information not quantified elsewhere.

This sweeping, comparative study of taxation in the United States and Australia shows that even as governments in the Western world have become increasingly sophisticated tax collectors, a competitive and ruthless market in advice on tax avoidance has developed. The same competitive forces in the late twentieth century which have driven down prices and sparked efficiencies in the production of fast food or computer parts have helped stimulate the markets for bads like tax shelters and problem gambling. Braithwaite draws the surprising conclusion that effective regulation could actually flip markets in vice to markets of virtue. Essential reading for anyone involved in policy, governance, and regulation, *Markets in Vice, Markets in Virtue* provides a blueprint for restoring the equity of Western tax systems and a breakthrough theory of how regulators can support markets in virtue and curtail markets in vice.

Local Content and Sustainable Development in Global Energy Markets analyses the topical and contentious issue of the critical intersections between local content requirements (LCRs) and the implementation of sustainable development treaties in global energy markets including Africa, Asia, Europe, North America, Latin America, South America, Australasia and the Middle East While LCRs generally aim to boost domestic value creation and economic growth, inappropriately designed LCRs could produce negative social, human rights and environmental outcomes, and a misalignment of a country's fiscal policies and global sustainable development goals. These unintended outcomes may ultimately serve as disincentive to foreign participation in a country's energy market. This book outlines the guiding principles of a sustainable and rights-based approach - focusing on transparency, accountability, gender justice and other human rights issues - to the design, application and implementation of LCRs in global energy markets to avoid misalignments.
