world. Béla G.
Lipták speaks on
Post-Oil Energy
Technology on
the AT&T Tech
Channel.

Filling the need
for new and
improved energy
sources is an
area where
societal effects
of science and

Bookmark File PDF Instrument

technology will surely increase. The editors and authors have attempted in this volume to present the most current work on the science and technology of coal and coal utilization. Serious disagreement

Bookmark File PDF Instrument

exists on
several key
issues such as
carbon dioxide
release and acid
rain. At the
same time,
however, coal is
the world's most
abundant fossil
fuel and will
have to be used
to supply the
world's energy

Bookmark File PDF Instrument

needs for the next several decades. The 1979 National Research Council Report, "Energy in Transition: 1985-2010," has estimated that the United States alone may go from a 1979 coal consumption of 14 QUADS per

Bookmark File PDF Instrument Engineers

(approximately
750 million tons
per year) to

approximately
40-50 QUADS per
annum

(approximately 2
billion tons per
year) by the
year 2010. If
this scale of
coal utilization
is to become a

Bookmark File PDF Instrument

reality, a
significant
level of
research and
development will
be necessary to
establish
advanced process
technologies and
to improve
related areas
such as
materials and
instrumentation.

Bookmark File

PDF Instrument

The editors hope that this volume will allow a technically educated person to become aware of the several aspects of coal utilization, from characterization of coal itself to the processes of coal

Bookmark File PDF Instrument

utilization. B.
