CAFE ECO : Macroéconomie S2 #EP01 " INTRODUCTION " Darija Page Facebook : <https://www.facebook.com/cafe.eco1/> Youtube : <https://www.youtube.com/channel/UCCm...>

This volume examines the theory of monetary circulation and applies it to several modern issues including unemployment, inflation, distribution and economic policies. It will provide a valuable contribution to the field of monetary economics, and in particular, its development of non-neoclassical approaches to monetary economics.

The volume aims at providing an outlet for some of the best papers presented at the 15th Annual Conference of the African Econometric Society, which is one of the OCO chaptersOCO of the International Econometric Society. Many of these papers represent the state of the art in financial econometrics and applied econometric modeling, and some also provide useful simulations that shed light on the models' ability to generate meaningful scenarios for forecasting and policy analysis. Contents: Financial Econometrics and International Finance: Modeling Interest Rates Using Reducible Stochastic Differential Equations: A Copula-Based Multivariate Approach (Ruijun Bu, Ludovic Giet, Kaddour Hadri and Michel Lubrano); Financial Risk Management Using Asymmetric Heavy-Tailed Distribution and Nonlinear Dependence Structures of Asset Returns Under Discontinuous Dynamics (Alaa El-Shazly); Modeling Time-Varying Dependence in the Term Structure of Interest Rates (Diaa Noureldin); Nonlinear Filtering and Market Implied Rating for a Jump-Diffusion Structural Model of Credit Risk (Alaa El-Shazly); Time-Varying Optimal Weights for International Asset Allocation in African and South Asian Markets (Dalia El-Edel); Econometric Theory and Methods: Econometric Methods for Ordered Responses: Some Recent Developments (Franco Peracchi); Which Quantile Is the Most Informative? Maximum Likelihood, Maximum Entropy and Quantile Regression (Anil K Bera, Antonio F Galvao Jr., Gabriel V Montes-Rojas, Sung Y Park); The Experimentics of Fairness (Anna Conte and Peter Moffatt); Uniform in Bandwidth Tests of Specification for Conditional Moment Restrictions Models (Pascal Lavergne and Pierre Ngumkeu); Joint LM Test for Homoscedasticity in a Two Way Error Components Model (Eugene Kouassi, Joel Sango, J M BossonBrou and Kern O Kymn); An Approximation to the Distribution of the Pooled Estimator When the Time Series Equation Is One of a Complete System (Ghazal Amer and William Mikhail); Monetary, Labor, Environmental and Other Econometric Applications: Monetary Policy and the Role of the Exchange Rate in Egypt (Tarek Morsi and Mai El-Mossallamy); International Migration, Remittances and Household Poverty Status in Egypt (Rania Roushdy, Ragui Assaad and Ali Rashed); Determinants of Job Quality and Wages of the Working Poor: Evidence From 1998OCO2006 Egypt Labor Market Panel Survey (Mona Said); A Contract-Theoretic Model of Conservation Agreements (Heidi Gjertsen, Theodore Groves, David A Miller, Eduard Niesten, Dale Squires and Joel Watson); Household Environment and Child Health in Egypt (Mahmoud Hailat and Franco Peracchi); Modeling the Relationship between Natural Resource Abundance, Economic Growth, and the Environment: A Cross-Country Study (Hala Abou-Ali and Yasmine M Abdelfattah); Global Cement Industry: Competitive and Institutional Frameworks (Tarek H Selim and Ahmed S Salem); On the Occurrence of Ponzi Schemes in Presence of Credit Restrictions Penalizing Default (Abdelkrim Seghir); Is Targeted Advertising Always Beneficial? (Nada Ben Elhadj-Ben Brahim, Rim Lahmandi-Ayed and Didier Laussel). Readership: Graduate students and researchers in the fields of econometrics, economic theory, applied econometrics.

This book gives a comprehensive description of macroeconometric modeling and its development over time. The first part depicts the history of macroeconometric model building, starting with Jan Tinbergen's and Lawrence R. Klein's contributions. It is unique in summarizing the development and specific structure of macroeconometric models built in North America, Europe, and various other parts of the world. The work thus offers an extensive source for researchers in the field. The second part of the book covers the systematic characteristics of macroeconometric models. It includes the household and enterprise sectors, disequilibria, financial flows, and money market sectors.

The mid-eighteenth century witnessed what might be dubbed an economic turn that resolutely changed the trajectory of world history. The discipline of economics itself emerged amidst this turn, and it is frequently traced back to the work of François Quesnay and his school of Physiocracy. Though lionized by the subsequent historiography of economics, the theoretical postulates and policy consequences of Physiocracy were disastrous at the time, resulting in a veritable subsistence trauma in France. This galvanized relentless and diverse critiques of the doctrine not only in France but also throughout the European world that have, hitherto, been largely neglected by scholars. Though Physiocracy was an integral part of the economic turn, it was rapidly overcome, both theoretically and practically, with durable and important consequences for the history of political economy. The Economic Turn brings together some of the leading historians of that moment to fundamentally recast our understanding of the origins and diverse natures of political economy in the Enlightenment.

The "globalization" of economic activities has given rise to an interest in the relations between such tendencies, the nature of societies, and the nature of various actors within and cross-cutting societies. This book serves to systematize the approach, and react to newly arising issues. It brings together proponents, sympathizers and critics of societal analysis, and seeks to enter new fields. The message stressed and demonstrated by the editors and authors, is that the "societal space" of social, economic and political interdependencies is not being obliterated but complexified, and therefore a topical and explanatory framework.

Cet ouvrage constitue une introduction aux problématiques de la compétitivité nationale dans le contexte de la mondialisation. Il vise avant tout à éclairer les futurs décideurs publics et privés, issus de l'université ou des grandes écoles, sur la nature des choix et arbitrages auxquels les politiques publiques nationales et internationales sont confrontées dans le contexte de la mondialisation de l'économie.
