'Jean-Jacques Lecercle's remarkable Philosophy of Nonsense offers a sustained and important account of an area that is usually hastily dismissed. Using the resources of contemporary philosophy - notably Deleuze and Lyotard - he manages to bring out the importance of nonsense' - Andrew Benjamin, University of Warwick Why are we, and in particular why are philosophers and linguists, so fascinated with nonsense? Why do Lewis Carroll and Edward Lear appear in so many otherwise dull and dry academic books? This amusing, yet rigorous new book by Jean-Jacques Lecercle shows how the genre of nonsense was constructed and why it has proved so enduring and enlightening for linguistics and philosophy.

While exploring events that led to the bloodshed in Kosovo in 1999. Denisa Kostovicova shows that the legacy of ethnic segregation is one of the major obstacles the international community faces in its efforts to establish an integrated multi-ethnic society in this territory." "Of interest to academics and students of nationalism and politics as well as practitioners and journalists, this book is an important advance in research on one of the most tragic European conflicts of recent times."--Jacket.

In many industrial applications, the existing constraints mandate the use of controllers of low and fixed order while typically, modern methods of optimal control produce high-order controllers. The authors seek to start to bridge the resultant gap and present a novel methodology for the design of low-order controllers such as those of the P, PI and PID types. Written in a self-contained and tutorial fashion, this book first develops a fundamental result, generalizing a classical stability theorem – the Hermite–Biehler Theorem – and then applies it to designing controllers that are widely used in industry. It contains material on: • current techniques for PID controller design; • stabilization of linear time-invariant plants using PID controllers; • optimal design with PID controllers; • robust and non-fragile PID controller design; • stabilization of first-order systems with time delay; • constant-gain stabilization with desired damping • constant-gain stabilization of discrete-time plants.

The city-state of Venice, with a population of less than 100,000, dominated a fragmented and fragile empire at the boundary between East and West, between Latin Christian, Greek Orthodox, and Muslim worlds. In this institutional and administrative history, Monique O'Connell explains the structures, processes, practices, and laws by which Venice maintained its vast overseas holdings. The legal, linguistic, religious, and cultural diversity within Venice's empire made it difficult to impose any centralization or unity among its disparate territories. O'Connell has mined the vast archival resources to explain how Venice's central government was able to administer and govern its extensive empire. O'Connell finds that successful governance depended heavily on the experience of governors, an interlocking network of noble families, who were sent overseas to negotiate the often conflicting demands of Venice's governing council and the local populations. In this nexus of state power and personal influence, these imperial administrators played a crucial role in representing the state as a hegemonic power; creating patronage and family connections between Venetian patricians and their subjects; and using the judicial system to negotiate a balance between local and imperial interests. In explaining the institutions and individuals that permitted this type of negotiation, O'Connell offers a historical example of an early modern empire at the height of imperial

expansion.

Can West and East ever understand each other? In this extraordinary book one of the world's leading Muslim scholars explores an area which has been almost entirely neglected by scholars in the field - the area of postmodernism and Islam. This landmark work is startling, constantly perceptive and certain to be debated for years to come.

On literature's cultural function.

In the last decade, Islamophobia in Western societies, where Muslims constitute the minority, has been studied extensively. However, Islamophobia is not restricted to the geography of the West, but rather constitutes a global phenomenon. It affects Muslim societies just as much, due to various historical, economic, political, cultural and social reasons. Islamophobia in Muslim Majority Societies constitutes a first attempt to open a debate about the understudied phenomenon of Islamophobia in Muslim majority societies. An interdisciplinary study, it focuses on socio-political and historical aspects of Islamophobia in Muslim majority societies. This volume will appeal to students, scholars and general readers who are interested in Racism Studies, Islamophobia Studies, the Middle East and North Africa (MENA) region, Islam and Politics.
