Financial crises are recurring phenomena that result in the financial distress of systemically important banks, making it imperative to understand how to best respond to such crises and their consequences. Two policy responses became prominent for dealing with these distressed institutions since the last Global Financial Crisis: bailouts and bail-ins. The main questions surrounding these responses touch everyone: Are bailouts or bail-ins good for the financial system and the real economy? Is it essential to save distressed financial institutions by putting taxpayer money at risk in bailouts, or is it better to use private money in bail-ins instead? Are there better options, such as first lines of defense that help prevent such distress in the first place? Can countercyclical prudential and monetary policies lessen the likelihood and severity of the financial crises that often bring about this distress? Through careful analysis, authors Berger and Roman review and critically assess the extant theoretical and empirical research on many resolution approaches and tools. Placing special emphasis on lessons learned from one of the biggest bailouts of all time, the Troubled Asset Relief Program (TARP), while also reviewing other programs and tools, TARP and Other Bank Bailouts and Bail-ins around the World sheds light on how best to protect the financial system on Wall Street and the real economy on Main Street. Presents a well-informed and rich account of bailouts, bail-ins, and other resolution approaches to resolve financially distressed banks. Uses TARP as a key case study of bailouts that has been thoroughly researched. Provides valuable research and policy guidance for dealing with future financial crises.

A growing body of evidence suggests that financial literacy plays an important role in financial well-being, and that differences in financial knowledge acquired early in life can explain a significant part of financial and more general well-being in adult life. Financial technology (FinTech) is revolutionizing the financial services industry at an unrivaled pace. Views differ regarding the impact that FinTech is likely to have on personal financial planning, well-being and societal welfare. In an era of mounting student debt, increased (digital) financial inclusion and threats arising from instances of (online) financial fraud, financial education and enlightened financial advising are appropriate policy interventions that enhance financial and overall well-being. Financial Literacy and Responsible Finance in the FinTech Era. Capabilities and Challenges engages in this important academic and policy agenda by presenting a set of seven chapters emanating from four parallel streams of literature related to financial literacy and responsible finance. The chapters in this book were originally published as a special issue of The European Journal of Finance.

Money-related stress dates as far back as concepts of money itself. Formerly it may have waxed and waned in tune with the economy, but today more individuals are experiencing financial mental anguish and self-destructive behavior regardless of bull or bear markets, recessions or boom periods. From a fringe area of psychology, financial therapy has emerged to meet increasingly salient concerns. Financial Therapy is the first full-length guide to the field, bridging theory, practical methods, and a growing cross-disciplinary evidence base to create a framework for improving this crucial aspect of clients' lives. Its contributors identify money-based disorders such as compulsive buying, financial hoarding, and workaholism, and analyze typical early experiences and the resulting mental constructs ("money scripts") that drive toxic relationships with money. Clearly relating financial stability to larger therapeutic goals, therapists from varied perspectives offer practical tools for assessment and intervention, advise on cultural and ethical considerations, and provide instructive case studies. A diverse palette of research-based and practice-based models meets monetary mental health issues with well-known treatment approaches, among them: Cognitive-behavioral and solution-focused therapies. Collaborative relationship models. Experiential approaches. Psychodynamic financial therapy. Feminist and humanistic approaches. Stages of change and motivational interviewing in financial therapy. A text that serves to introduce and define the field as well as plan for its future, Financial Therapy is an important investment for professionals in psychotherapy and counseling, family therapy, financial planning, and social policy.

Financial market behavior and key trading strategies—illuminated by interviews with top hedge fund experts Efficiently Inefficient describes the key trading strategies used by hedge funds and demystifies the secret world of active investing. Leading financial economist Lasse Heje Pedersen combines the latest research with real-world examples to show how certain tactics make money—and why they sometimes don't. He explores equity strategies, macro strategies, and arbitrage strategies, and fundamental tools for portfolio choice, risk management, equity valuation, and yield curve trading. The book also features interviews with leading hedge fund managers: Lee Ainslie, Cliff Asness, Jim Chanos, Ken Griffin, David Harding, John Paulson, Myron Scholes, and George Soros. Efficiently Inefficient reveals how financial markets really work.

Created through a student-tested, faculty-approved review process with specific student and faculty input, PFIN2 is an engaging and accessible solution to accommodate the diverse lifestyles of today's learners at a value-based price.
