A groundbreaking look at marriage, one of the most basic and universal of all human institutions, which reveals the emotional, physical, economic, and sexual benefits that marriage brings to individuals and society as a whole. The Case for Marriage is a critically important intervention in the national debate about the future of family. Based on the authoritative research of family sociologist Linda J. Waite, journalist Maggie Gallagher, and a number of other scholars, this book 's findings dramatically contradict the anti-marriage myths that have become the common sense of most Americans. Today a broad

consensus holds that marriage is a bad deal for women, that divorce is better for children when parents are unhappy, and that marriage is essentially a private choice, not a public institution. Waite and Gallagher flatly contradict these assumptions, arguing instead that by a broad range of indices, marriage is actually better for you than being single or divorced — physically, materially, and spiritually. They contend that married people live longer, have better health, earn more money, accumulate more wealth, feel more fulfillment in their lives, enjoy more satisfying sexual relationships, and have happier and more successful children than those who remain single, cohabit, or get divorced. The Case for Marriage combines clearheaded analysis, penetrating cultural criticism, and practical advice for strengthening the institution of marriage, and provides clear, essential guidelines for reestablishing marriage as the foundation for a healthy and happy society. “ A compelling defense of a sacred union. The Case for Marriage is well written and well argued, empirically rigorous and learned, practical and commonsensical. ” -- William J. Bennett, author of The Book of Virtues “ Makes the absolutely critical point that marriage has been misrepresented and misunderstood. ” -- The Wall Street Journal [www.broadwaybooks.com](http://www.broadwaybooks.com)

This two-volume book presents the outcomes of the 8th International Conference on Soft Computing for Problem Solving, SocProS 2018. This conference was a joint technical collaboration between the Soft Computing Research Society, Liverpool Hope University (UK), and Vellore Institute of Technology (India), and brought together researchers, engineers and practitioners to discuss thought-provoking developments and challenges in order to select potential future directions. The book highlights the latest advances and innovations in the interdisciplinary areas of soft computing, including original research papers on algorithms (artificial immune systems, artificial neural networks, genetic algorithms, genetic programming, and particle swarm optimization) and applications (control systems, data mining and clustering, finance, weather forecasting, game theory, business and forecasting applications). It offers a valuable resource for both young and experienced researchers dealing with complex and intricate real-world problems that are difficult to solve using traditional methods.

This book provides an overview of marginality or marginalization, as a concept, characterizing a situation of impediments — social, political, economic, physical, and environmental — that impact the abilities of many people and societies to improve their human condition. It examines a wide range of examples and viewpoints of societies struggling with poverty, social inequality and marginalization. Though the book will be especially interesting for those looking for insights into the situation and position of ethnic groups living in harsh mountainous conditions in the Himalayan region, examples from other parts of the world such as Kyrgyzstan, Israel, Switzerland and Finland provide an opportunity for comparison of marginality and marginalization from around the world. Also addressed are issues such as livelihood, outmigration and environmental threats, taking into account the conditions, scale and perspective of observation. Throughout the text, particular attention is given to the context and concept of ‘ marginalization ’ , which sadly remains a persistent reality of human life. It is in this context that this book seeks to advance our global understanding of what marginalization is, how it is manifested and what causes it, while also proposing remedial strategies.

NatGeo takes you on a photographic tour of the world ’ s most spectacular destinations, inspiring tangible ideas for your next trip. Travel to hundreds of the most breathtaking locales—both natural and man-made—illustrated with vivid images taken by the organization's world-class photographers. These images, coupled with evocative text, feature a plethora of visual wonders: ancient monoliths, scenic islands, stunning artwork, electric cityscapes, white-sand seashores, rain forests, ancient cobbled streets, and both classic and innovative architecture. Loaded with hard service information for each location, Destinations of a Lifetime has it all: when to go, where to eat, where to stay, and what to do to ensure the most enriching and authentic experience.

Environmental changes have significant impacts on people's lives and livelihoods, particularly the urban poor and those living in informal settlements. In an effort to reduce urban residents' exposure to climate change and hazards such as natural disasters, resettlement programmes are becoming widespread across the Global South. While resettlement may reduce a region's future climate-related disaster risk, it often increases poverty and vulnerability, and can be used as a reason to evict people from areas undergoing redevelopment. A collaboration between the Bartlett Development Planning Unit at UCL, the Indian Institute for Human Settlements and the Latin American Social Science Faculty, *Rethinking Urban Risk and Resettlement in the Global South* collates the findings from 'Reducing Relocation Risks', a research project that studied urban areas across India, Uganda, Peru, Colombia and Mexico. The findings are augmented with chapters by researchers with many years of insight into resettlement, property rights and evictions, who offer cases from Monserrat, Cambodia, Philippines and elsewhere. The contributors collectively argue that the processes for making and implementing decisions play a large part in determining whether outcomes are socially just, and examine various value systems and strategies adopted by individuals versus authorities. Considering perceptions of risk, the volume offers a unique way to think about economic assessments in the context of resettlement and draws parallels between different country contexts to compare fully urbanised areas with those experiencing urban growth. It also provides an opportunity to re-think how disaster risk management can better address the accumulation of urban risks through urban planning.

"Having been born a freeman, and for more than thirty years enjoyed the blessings of liberty in a free State—and having at the end of that time been kidnapped and sold into Slavery, where I remained, until happily rescued in the month of January, 1853, after a bondage of twelve years—it has been suggested that an account of my life and fortunes would not be uninteresting to the public." -an excerpt

The book provides significant information on some of the promising edible medicinal plants and how these possess both nutritive as well as medicinal value. The significance of these edible plants in traditional medicine, their distribution in different regions and the importance of their chemical constituents are discussed systematically concerning the role of these plants in ethnomedicine in different regions of the world. The current volume focuses on the economic and culturally important medicinal uses of edible plants and a detailed survey of the literature on scientific researches of pharmacognostical characteristics, traditional uses, scientific validation, and phytochemical composition, and pharmacological activities. This book is a single-source scientific reference to explore the specific factors that contribute to these potential health benefits, as well as discussing how to maximize those potential benefits. Chemists, food technologists, pharmacologists, phytochemists as well as all professionals involved with quality control and standardization will find in this book a valuable and updated basis for their work.

This comprehensive, best-selling reference provides the fundamental information you'll need to understand both the operation and proper application of all types of gas turbines. The full spectrum of hardware, as well as typical application scenarios are fully explored, along with operating parameters, controls, inlet treatments, inspection, troubleshooting, and more. The second edition adds a new chapter on gas turbine noise control, as well as an expanded section on use of inlet cooling for power augmentation and NOx control. The author has provided many helpful tips that will enable diagnosis of problems in their early stages and analysis of failures to prevent their recurrence. Also treated are the effects of the external environment on gas turbine operation and life, as well as the impact of the gas turbine on its surrounding environment.

Plant tissue culture (PTC) is basic to all plant biotechnologies and is an exciting area of basic and applied sciences with considerable scope for further research. PTC is also the best approach to demonstrate the totipotency of plant cells, and to exploit it for numerous practical applications. It offers technologies for crop improvement (Haploid and Triploid production, In Vitro Fertilization, Hybrid Embryo Rescue, Variant Selection), clonal propagation (Micropropagation), virus elimination (Shoot Tip Culture), germplasm conservation, production of industrial phytochemicals, and regeneration of plants from genetically manipulated cells by recombinant DNA technology (Genetic Engineering) or cell fusion (Somatic Hybridization and Cybridization). Considerable work is being done to understand the physiology and genetics of in vitro embryogenesis and organogenesis using model systems, especially Arabidopsis and carrot, which is likely to enhance the efficiency of in vitro regeneration protocols. All these aspects are covered extensively in the present book. Since the first book on Plant Tissue Culture by Prof. P.R. White in 1943, several volumes describing different aspects of PTC have been published. Most of these are compilation of invited articles by different experts or proceedings of conferences. More recently, a number of books describing the Methods and Protocols for one or more techniques of PTC have been published which should serve as useful laboratory manuals. The impetus for writing this book was to make available a complete and up-to-date text covering all basic and applied aspects of PTC for the students and early-career researchers of plant sciences and plant / agricultural biotechnology. The book comprises of nineteen chapters profusely illustrated with self-explanatory illustrations. Most of the chapters include well-tested protocols and relevant media compositions that should be helpful in conducting laboratory experiments. For those interested in further details, Suggested Further Reading is given at the end of each chapter, and a Subject and Plant Index is provided at the end of the book.
