One year ago, a remarkable breakthrough changed what it means to be human. Now from a new research center in Puerto Rico, Alison Shaw and her team are about to stun the world, again. Less than a thousand miles away, a mysterious ship is spotted off the quiet coast of Guyana. Strange circumstances attract the attention of the U.S. Navy, including naval investigators John Clay and Steve Caesare. They soon find that a Chinese crew is making mysterious trips into the jungle under the cover of darkness. Someone has made a surprising discovery beneath the shrouded canopies of South America. One that will change everything. As they race to piece the puzzle together, Clay and Caesare begin to uncover a string of secrets with frightening consequences. The discovery of the century has been made ... and someone is prepared to fight for it.

A new shared world anthology featuring a who's who of science fiction writers including Larry Niven, Steven Perry and Gary Gygax. Pledged to stop the predator Khalians, the Fleet must win a decisive victory to break the war's deadlock--and bring peace to their worlds.

In 1984 a doomsday vault was constructed on a remote island in the Arctic Ocean. Its purpose was to preserve Earth's genetic history in the event of a global catastrophe. Now, decades later, a second vault has been uncovered. This one resting where no one ever expected. And the problem is...it's not ours. Yet even more curious than the vault itself, is what lies inside. Seeds. Millions of seeds. Each with a genetic embryo untouched and perfectly preserved. Waiting. No one knows who built it. Or when. What we have managed to figure out is that whoever it was traveled an immense distance. For the sole purpose of hiding their genetic blueprints on Earth. But why? Now a small group of marine biologists and navy investigators have been assigned to find out. Before anyone else does. But Alison Shaw and John Clay are not prepared for what they are about to uncover. Beginning with the truth behind our own evolution.

BreakthroughBy Michael C. Grumley

It began with a breakthrough. In interspecies communication. Leading both John Clay and Alison Shaw through a series of startling discoveries and life-altering revelations. Divulging who we really are as a species. Why we are here...and who is here with us. And the greatest lesson of all, that our brains are not as rare and unique as humans had assumed. But rather just one of three brains between three extraordinary species. All influenced by a fluke of evolution that should never have existed on Earth in the first place. Something we are now finally on the cusp of understanding. It will take more than just one brain to do it. More than just one species. And courage from all three. Courage in the face of those still trying to stop Clay and Alison before their stranglehold on the world is lost. But Clay and his team already know the truth. That there is no courage without fear, and no victory without sacrifice.

The world is losing hope.Political and social infighting threaten to destroy the world. Rancor and hatred only grow stronger, engulfing entire nations. And each day moral and economic strife brings embroiled countries ever closer to war. But hope is not dead. Everywhere, pockets of honor and compassion continue to persevere. Where human lives are cherished and valor endures. And one small, extraordinary group fights to save us all. A team in possession of the mother of all secrets. The one secret - the one discovery - that could bring the world back from the brink.

One small, handwritten letterSent from a dark, remote corner of the planetAnd lost in the system for sixty yearsIs about to change the entire human race.Outside Denver, Colorado, Joe Rickards stands over a small aircraft wreckage, studying burnt remains still smoldering in a field of freshly fallen snow...an investigator for the NTSB, working to carefully roll back the last several hours and identify the cause of the accident. But this time, he can't. The details behind this tragedy don't add up. Unlike every other investigation of Joe's career, the facts make no sense. Each new piece of information only makes the accident more mysterious, and more baffling.Why would a person receive an age-old letter and suddenly disappear into the thick of night...paying to be flown out of a closed airport in the worst possible weather conditions, by a pilot who hadn't had his hand on the stick in years?With the only surviving relative insisting her grandfather would never have climbed into a small airplane in the first place, even in perfect weather.A bizarre string of events culminating in a horrible accident unlike anything Rickards has experienced. Leaving his only hope at understanding it in the hands of the victim's sole remaining relative. Beginning with how a mysterious letter could turn up after being lost in the system for sixty years. Sent by someone who should have already been long dead. A single letter, Joe Rickards is about to discover, with a secret that will change the entire world.

"It began in Ethiopia, hundreds of thousands of years ago. When a handful of genetic mutations caused evolution to split from the primates. And mankind was born. Now, eons later, evidence of more splits from the apes are being unearthed. And with them, a disturbing realization. Ours was only one of many. And yet we survived. But it was not by luck or chance. We survived because humans had something the others did not. A unique ingredient that has only now been rediscovered. First in the mountains of South America, where it was promptly destroyed by the Chinese. And now a second source in Africa. The epicenter of mankind's very inception. A place that John Clay and Alison Shaw must find quickly. Because the Russians already know what we are searching for. And the Chinese want back what is rightfully theirs. The mother of all secrets awaits the world, in Africa. One that will not only explain who we are, but will decipher the very code within our own DNA."--Provided by publisher.

After suffering an accidental head injury, eighteen-year-old Evan Nash begins having disturbing visions and turns to psychiatrist Shannon Mayer for help, but Shannon soon discovers that Evan's conditions have a mysterious connection to her missing daughter.

The Challenge Built to Last, the defining management study of the nineties, showed how great companies triumph over time and how long-term sustained performance can be engineered into the DNA of an enterprise from the verybeginning. But what about the company that is not born with great DNA? How can good companies, mediocre companies, even bad companies achieve enduring greatness? The Study For years, this question preyed on the mind of Jim Collins. Are there companies that defy gravity and convert long-term mediocrity or worse into long-term superiority? And if so, what are the universal distinguishing characteristics that cause a company to go from good to great? The Standards Using tough benchmarks, Collins and his research team identified a set of elite companies that made the leap to great results and sustained those results for at least fifteen years. How great? After the leap, the good-to-great companies generated cumulative stock returns that beat the general stock market by an average of seven times in fifteen years, better than twice the results delivered by a composite index of the world's greatest companies, including Coca-Cola, Intel, General Electric, and Merck. The Comparisons The research team contrasted the good-to-great companies with a carefully selected set of comparison companies that failed to make the leap from good to great. What was different? Why did one set of companies become truly great performers while the other set remained only good? Over five years, the team analyzed the histories of all twenty-eight companies in the study. After sifting through mountains of data and thousands of pages of interviews, Collins and his crew discovered the key determinants of greatness -- why some companies make the leap and others don't. The Findings The findings of the Good to Great study will surprise many readers and shed light on virtually every area of management strategy and practice. The findings include: Level 5 Leaders: The research team was shocked to discover the type of leadership required to achieve greatness. The Hedgehog Concept (Simplify within the Three Circles): To go from good to great requires transcending the curse of competence. A Culture of Discipline: When you combine a culture of discipline with an ethic of entrepreneurship, you get the magical alchemy of great results. Technology Accelerators: Good-to-great companies think differently about the role of technology. The Flywheel and the Doom Loop: Those who launch radical change programs and wrenching restructurings will almost certainly fail to make the leap. "Some of the key concepts discerned in the study," comments Jim Collins, "fly in the face of our modern business culture and will, quite frankly, upset some people." Perhaps, but who can afford to ignore these findings?
