The core goal of photography is representing subjects that have depth and texture in a medium that inherently lacks both those qualities, and this book shows the best way to rise to that challenge: through the careful application and capture of lighting. It demonstrates how to accentuate or minimize textures, add or subtract highlights, and create or combat shadows to showcase the subjects in the best way and create the illusion of a third dimension in the images. Exploring techniques for lighting portraits, still-life subjects, nature images, and architectural shots, both studio and location lighting are covered in detail. The book teaches photographers how to study their subjectsNwith all of the textures, colors, shapes, and surfaces they haveNthen visualize the image as a finished photograph before the photography actually begins. With chapters that thoroughly cover the science of lighting and visualization, photographers can apply that knowledge and successfully create artful images.

Featuring 15 of the industry's top photographers, among them Monte Zucker, Michael Ayers, Dave Newman, and Kathleen Hawkins, this guide teaches professional photographers how to capture the most flattering views of the female form?and appeal to their largely female clientele?through careful lighting and posing. With 36 detailed lighting and posing diagrams illustrating how to re-create the work of the pros, this handbook reveals numerous ways to create a technically flawless, saleable portrait of a female client.

Learn to capture facial expressions, tell a story with a series of candids, add interest to large-group shots, and more. Apply these techniques and watch your subjects come to life.
