"CNC programmers and service technicians will find this book a very useful training and reference tool to use in a production environment. Also, it will provide the basis for exploring in great depth the extremely wide and rich field of programming tools that macros truly are."--BOOK JACKET.

This practical workbook provides current and future helping professionals with step-by-step guidelines for examining and resolving professional ethical dilemmas. It's the authors' belief that most serious ethical problems can be avoided by practitioners who have a strong sense of ethical self-awareness and an ability to stay out of "ethical traps" that result from their own experiences and preconceptions. Forty-

nine "ethical dilemmas" are included for classroom discussion and resolution, along with the authors' suggestions for resolving them based on a process of analysis unique to this book.

The "Encyclopedia" covers the genre from 1920 to 1994. The genre, however, can be very confusing: films often have several titles, and many of the stars have more than one pseudonym. In an effort to clarify some of the confusion, the authors have included all the information available to them on almost 3,300 films. Each entry includes a listing of the production company, the cast and crew, distributors, running times, reviews with star ratings whenever possible, and alternate film titles. A list of film series and one of the stars'

The five-volume set LNCS 9155-9159 constitutes the refereed proceedings of the 15th International Conference on Computational Science and Its Applications, ICCSA 2015, held in Banff, AB, Canada, in June 2015. The 232 revised full papers presented in 22 workshops and a general track were carefully reviewed and selected from 780 initial submissions for inclusion in this volume. They cover various areas in computational science ranging from computational science technologies to specific areas of computational science such as computational geometry and security.

The Offshore Pipeline Construction Industry: Activity Modeling and Cost Estimation in the United States Gulf of Mexico presents the latest technical concepts and economic calculations, helping engineers make better business decisions. The book covers flow assurance, development strategies on pipeline requirements and the construction service side with a global perspective. In addition, it focuses on one of the most underdeveloped, promising assets – the Gulf of Mexico. Pipeline construction and decommissioning estimation methods are examined with reliable data presented. A final section covers trends for oil, gas, bulk oil, bulk gas, service and umbilical pipelines for installation and decommissioning using correlation models. This book delivers a much-needed tool for the pipeline engineer to

assembling an enormous collection of film-related materials. While most collectors concentrate on image-centric items like posters and stills, Makino recognized the importance of books, magazines and other written texts for scholarship. His collection spans the entire history of Japanese cinema, and contains periodicals, books, pamphlets, posters, programs, scripts, diaries, studio records, fan zines, catalogs, textbooks, photographs, newspapers, clipping files, and the personal libraries of a number of film personalities. Makino opened the collection to a variety of film scholars, enabling them to write histories that were otherwise unimaginable. This volume brings together a number of these scholars to honor Makino Mamoru and his dedication to the study of Japanese cinema. (In English and Japanese.)

The present volume examines the relationship between second language practice and what is known about the process of second language acquisition, summarising the current state of second language acquisition theory, drawing general conclusions about its application to methods and materials and describing what characteristics effective materials should have. The author concludes that a solution to language teaching lies not so much in expensive equipment, exotic new methods, or sophisticated language analysis, but rather in the full utilisation of the most important resources - native speakers of the language - in real communication.
