The purpose of this project was to increase students' effectiveness in multi-step problem solving in mathematics through breaking a multi-step word problem into smaller pieces that could then be taken one step at a time using an explicit approach called the FLICK-it Approach. Through using this strategy, students' understanding of the problem and their confidence in solving would increase when facing multi-step word problems, allowing for the development of more effective problem solving skills. The researcher based this project on research-supported principles of explicit instruction used as a tool to assist students in solving multi-step word problems, and on the evidence that confidence in math is a major indicator in success in mathematical problem solving. Time was set aside for solving problems using this explicit approach four days a week, including time to create resource pages that would be used within the context of the FLICK-it Approach.
