Global talent has never been more mobile or sought after. A complex phenomenon that takes many forms, the movement of people with skills includes migrants crossing borders for temporary stays abroad as well as settlement, students moving for degrees and temporary and permanent stays, and even tourists and refugees who decide to stay abroad and use their skills. Countries attracting global talent increase their stock of human and technological skills, and in the past decade many have welcomed foreign professionals and students to redress domestic skill shortages and to quicken economic growth. This book includes general and theoretical papers on skilled migration and also papers on the country experiences of Australia, India, Japan, Singapore, the United Kingdom, and the United States. It addresses the socio-economic and cultural challenges created by increased mobility in a world where globalizing and localizing forces are at work simultaneously

After decades of stagnation, the size of Latin America's middle class recently expanded to the point where, for the first time ever, the number of people in poverty is equal to the size of the middle class. This volume investigates the nature, determinants and possible consequences of this remarkable process of social transformation. We propose an original definition of the middle class, tailor-made for Latin America, centered on the concept of economic security and thus a low probability of falling into poverty. Given our definition of the middle class, there are four, not three, classes in Latin America. Sandwiched between the poor and the middle class there lies a large group of people who appear to make ends meet well enough, but do not enjoy the economic security that would be required for membership of the middle class. We call this group the 'vulnerable'. In an almost mechanical sense, these transformations in Latin America reflect both economic growth and declining inequality in over the period. We adopt a measure of mobility that decomposes the 'gainers' and 'losers' in society by social class of each household. The continent has experienced a large amount of churning over the last 15 years, at least 43% of all Latin Americans changed social classes between the mid 1990s and the end of the 2000s. Despite the upward mobility trend, intergenerational mobility, a better proxy for inequality of opportunity, remains stagnant. Educational achievement and attainment remain to be strongly dependent upon parental education levels. Despite the recent growth in pro-poor programs, the middle class has benefited disproportionately from social security transfers and are increasingly opting out from government services. Central to the region's prospects of continued progress will be its ability to harness the new middle class into a new, more inclusive social contract, where the better-off pay their fair share of taxes, and demand improved public services.
