Over the years, several post-harvest treatment options have been utilized, especially fumigation using methyl bromide and ethylene ... to depletion of the ozone layer. Other treatment technologies ...

"This book is likely to become the future point of reference for scholarship on environmental issues in Israel. Tal combines his extensive inside knowledge with broad and thorough research to take the reader clearly through a complex fabric of personalities, organizations, and issues."—Stuart Schoenfeld, York University "This is truly an excellent book. It is the first treatment of the whole array of environmental issues in Israel, and in its historical context — an absolute necessity. Extremely well-written and in fact hard to put down, this book is useful on many levels, for United Nations Agencies and development officials, Israeli and Palestinian government officials, and environmentalists and teachers around the world."—Brock Evans, Executive Director, The Endangered Species Coalition and author of many articles and books on the politics of the environment "Pollution in a Promised Land is an innovative book, and an important one, by perhaps the most prominent environmental activist in Israel. Tal's approach is to take an "eagle's eye view" of his vast subject, now gliding far above, providing overview, now swooping down very close and, through interviews or anecdotes, describing his subject with great immediacy and in memorable detail."—Noah J. Efron, Bar Ilan University "Anyone who cares about the land of Israel should read Pollution in a Promised Land. It is critical to understanding the social, political, and scientific dimensions of the country's environmental challenges as well as the country's remarkable ecological achievements. Alon Tal is uniquely qualified to present this fascinating and dramatic environmental history."—Tzachi Hanegbi, Minister of the Environment, Israel

Methyl bromide, a potent pest control chemical, was identified as an ozone depleting substance (ODS) in 1972. The phase out of this toxic chemical presents a special challenge. To replace methyl bromide, users around the world must have access to reliable and useful technical information. This publication was produced by the United Nations Environment Programme to promote the methyl bromide phase out. It allows the reader to carefully and thoroughly assess many available alternatives and decide on the best option for their situation. The publication also provides addresses of suppliers and specialists in alternatives; references and websites; and contacts for implementing agencies.

This book presents the information needed to understand why the ozone depletion catastrophe theory is a hoax. The evidence includes how ozone scientist Gordon Dobson discovered the Antarctic ozone hole in 1956, before CFCs were widely used, & showed that it was a natural annual phenomenon; how natural sources of chlorine far outweigh man-made CFCs; & much more. It also discusses a program that will really protect the environment - & man, the most important resource in the environment. Order from: 21st Century Science Associates, P.O. Publisher Description

Presents essays that offer varying viewpoints on air and water pollution.

Explains why the ozone layer is vital to life on Earth, identifies the causes of the large hole in the ozone layer over Antarctica, and tells what can be done to alleviate the problem

In Ghostworkers and Greens, Adam Tompkins reveals a history of unexpected cooperation between farmworker groups and environmental organizations. Tompkins shows that the separate movements shared a common concern about the effects of pesticides on human health.

Protecting the Ozone Layer: Lessons, Models, and Prospects Since the mid-1980s, the international community has adopted several significant instruments designed to reverse the degradation of the life support systems of the planet. None of these international agreements have been as successful as the 1987 Montreal Protocol in creating the incentives and mechanisms for protecting the ozone layer. Through the efforts of industry, government and public interest groups, national commitments and achievements have progressed further and faster than expected, while the list of controlled chemicals has expanded. Now in its second decade, the Protocol enters a crucial phase of its implementation. Protecting the Ozone Layer: Lessons, Models, and Prospects presents a wealth of information about the scientific, legal-political, and technological hurdles that we will have to overcome if humanity is to reverse its self-destructive course. The technology section in particular should appeal to industries affected by ozone layer protection as well as those affected by climate protection, since this is the first ozone publication featuring insights by the companies that spearheaded the major technological breakthroughs. Every initiative to improve the environmental performance of industry has been accompanied by pronouncements of economic devastation, from acid rain to auto emissions standards, from auto mileage improvements to the protection of the ozone layer. Each new initiative brought claims from industry that this situation was different, yet none of their predictions have come true. At a time when industry fights efforts to protect the environment, the ozone experience shows both how technical breakthroughs have enabled environmental protection policies to work in the past and how they will work again in the future. Protecting the Ozone Layer: Lessons, Models, and Prospects is the product of a Colloquium that was organized in September 1997 to celebrate the tenth anniversary of the Montreal Protocol. Contributions have been gathered from researchers and practitioners in the field, including some of the very same scientists whose work awakened the international community to the seriousness of the danger that humanity now faces. Other contributors include the scholars and diplomats who wrote and negotiated the text of the Protocol and its amendments, and the key figures who have been influential in convincing industry to support the process.
