An Introduction to Basic Statistics and Probability – p. 32/40. Expected Value of \bar{X} The average of the sample means (\bar{x} 's) when taken over a large number of random samples of size n will approximate μ . Let X_1, \dots, X_n be a random sample from some population with mean μ .

~~An Introduction to Basic Statistics and Probability~~
Probability of Events Simple events can be assigned a probability (relative frequency of its occurrence in a long run). It's obvious that each of these probabilities must be a non-negative number. To find a probability of any other event A (not necessarily simple), we then add the probabilities of the simple events A consists of. This immediately
