Car Engine Oil | Petronas Lubricants International

Motor oil, engine oil, or engine lubricant is any one of various substances that consist of base oils enhanced with various additives, particularly antiwear additives, detergents, dispersants, and, for multi-grade oils, viscosity index improvers. Motor oil is used for lubrication of internal combustion engines. The main function of motor oil is to reduce friction and wear on moving parts and to clean the engine from sludge (one of the functions of dispersants) and varnish (detergents).

This comprehensive resource discusses all the major aspects of automotive and engine lubrication - presenting state-of-the-art advances in the field from both research and industrial perspectives. This book should be of interest to mechanical, lubrication and automotive engineers, automotive and machinery designers as well as undergraduate and graduate students in these fields. Written by over 100 experts from 16 countries, it reviews the methods devloped to measure bearing film thickness and the correlations that have been calculated between film thickness and viscosity, introduces a physio-mechanical model to explain the role played between the detergency phenomenon for engines by the internal stress developed in the film during its gels state, considers the factors affecting oil consumption and the tests created to ensure acceptable levels of service in the field under arduous operating conditions, details lubricant specification for farm tractors as well as technical aspects of the compromises to consider in attempting rationalization, examines the function, use and application of automatic transmission fluids and the requirements, test procedures and original equipment manufacturers' specifications. Containing more than 675 literature references and over 650 drawings, photographs and equations.

The automotive lubricants arena has undergone significant changes since the first edition of this book was published in 1996. Environmental concerns, particularly reagarding improvement of ar quality have been important in recent years, Reduced emmissions are directly related to changes in lubricant specifications and quality, and the second edition of the Automotive Lubricants Reference Book reflects the urgency of such matters by including updated and expanded detail. This second edition also considers the recent phenomenon of increased consolidation within the oil and petroleum additive arenas, which has resulted in fewer poeple for research, devlopment, and implementation, along with fewer competing companies. After reviewing the first edition the authors have fully reviewed and updated the information to fit in with the changes in technology and markets. Chapters include Introduction and Fundamentals Constituents of Modern Lubricants Crankcase Oil Testing Crankcase Oil Quality Levels and Formulations Practical Experiences with Lubricant Problems Performance Levels, Classification, Specification, and Approval of Engine Lubricants. Other Lubricants for Road Vehicles Other Specialized Oils of Interest Blending, Storage, Purchase, and Use Safety Health, and the Environment The Future.

Motor Vehicle Oil Lubricants And Fluids Contract Period

Provides a fundamental understanding of lubricants and lubricant technology including emerging lubricants such as synthetic and environmentally friendly lubricants • Teaches the reader to understand the role of technology involved in the manufacture of lubricants • Details both major industrial oils and automotive oils for various engines • Covers emerging lubricant technology such as synthetic and environmentally friendly lubricants • Discusses lubricant blending technology, storage, re-refining and condition monitoring of lubricant in equipment

Careful selection of the right lubricant(s) is required to keep a machine running smoothly. Lubrication Fundamentals, Third Edition, Revised and Expanded describes the need and design for the many specialized oils and greases used to lubricate machine elements and builds on the tribology and lubrication basics discussed in previous editions. Utilizing knowledge from leading experts in the field, the third edition covers new lubrication requirements, crude oil composition and selection, base stock manufacture, lubricant formulation and evaluation, machinery and lubrication fundamentals, and environmental stewardship. The book combines lubrication theory with practical knowledge, and provides many useful illustrations to highlight key industrial, commercial, marine, aviation, and automotive lubricant applications and concepts. All previous edition chapters have been updated to include new technologies, applications, and specifications that have been introduced in the past 15 years. What's New in the Third Edition: Adds three new chapters on the growing renewable energy application of wind turbines, the impact of lubricants on energy efficiency, and best practice guidelines on establishing an in-service lubricant analysis program Updates API, SAE, and ACEA engine oil specifications, descriptions of new engine oil tests, impact of engine and fuel technology trends on engine oil Includes the latest environmental lubricant tests, definitions, and labelling programs Compiles expert information from ExxonMobil publications and the foremost international equipment builders and industry associations Covers key influences impacting lubricant formulations and technology Offers data on global energy demand and interesting statistics such as the worldwide population of nuclear reactors, wind turbines, and output of hydraulic turbines Presents new sections on the history of synthetic lubricants and hazardous chemical labeling for lubricants Whether used as a training guide for industry novices, a textbook for students to understand lubrication principles, or a technical reference for experienced lubrication and tribology professionals, Lubrication Fundamentals, Third Edition, Revised and Expanded is a "must read" for maintenance professionals, lubricant formulators and marketers, chemists, and lubrication, surface, chemical, mechanical, and automotive engineers.

Lubrication and Lubricant Selection provides engineers with guidance to lubrication practice in industry, with emphasis on practical application. Specific guidance is given regarding the appropriate selection of lubricants for a wide range of uses. Factors determining the suitability of a lubricant for a particular purpose are described and explained.

This is a new edition for November 2013 If you own a classic car, you face the problem of choosing the appropriate modern lubricants to use in its engine, gearbox, final drive and chassis. The original owner's handbook, if you have one, is probably of limited use as the lubricants it lists are probably no longer available. Even if you have some good information, you still have problems: are modern oils suitable? If yes, which ones? (Even within a single brand there may be five or six different oils sold for apparently the same purpose.) If no, then why not? What characteristics are unsuitable, and where do you turn to obtain an appropriate oil? This book gives all owners the information that will allow them to understand the lubrication needs of their cars, and to relate those needs to modern lubricants. You will be able to make correct and safe choices, or to seek out appropriate specialised lubricants if necessary, using step-by-step instructions. Answers are also given to many of the most commonly asked questions about suitable oils for classic cars.

Lubricating oils are specially formulated oils that reduce friction between moving parts and help maintain mechanical parts. Lubricating oil is a thick fatty oil used to make the parts of a machine move smoothly. The lubricants market is growing due to the growing automotive industry, increased consumer awareness and government regulations regarding lubricants. Lubricants are used in vehicles to reduce friction, which leads to a longer lifespan and reduced wear and tear on the vehicles. The growth of lubricants usage in the automotive industry is mainly due to an increasing demand for heavy duty vehicles and light passenger vehicles, and an increase in the average lifespan of the vehicles. As saving conventional resources and cutting emissions and energy have become central environmental matters, the lubricants are progressively attracting more consumer awareness. Greases are made by using oil (typically mineral oil) and mixing it with thickeners (such as lithium-based soaps). They may also contain additional lubricating particles, such as graphite, molybdenum disulfide, or polytetrafluoroethylene (PTFE, aka Teflon). White grease is made from inedible hog fat and has a low content of free fatty acids. Yellow grease is made from darker parts of the hog and may include parts used to make white grease. Brown grease contains beef and mutton fats as well as hog fats. Synthetic grease may consist of synthetic oils containing standard soaps or may be a mixture of synthetic thickeners, or bases, in petroleum oils. Silicones are greases in which both the base and the oil are synthetic. Asia-Pacific represents the largest and the fastest growing market, with volume sales projected to grow at a CAGR of 5% over the analysis period. Automotive lubricants represents the largest product market, with engine oils generating a major chunk of the revenues. The market for industrial lubricants is supported by the huge demand for industrial engine oils and growing consumption of process oils. The major content of the book are Food and Technical Grade White Oils and Highly Refined Paraffins, Base Oils from Petroleum, Formulation of Automotive Lubricants, Lubricating Grease, Aviation Lubricants, Formulation and Structure of Lubricating Greases, Marine Lubricants, Industrial Lubricants, Refining of Petroleum, Lubricating Oils, Greases and Solid Lubricants, Refinery Products, Crude Distillation and Photographs of Machinery with Suppliers Contact Details. This book will be a mile stone for its readers who are new to this sector, will also find useful for professionals, entrepreneurs, those studying and researching in this important area.
