Need a shortcut to a degree in shipping great software? Successful team leaders must have an extremely broad skill set to find the right product, work through a complex and ever-changing development process, and do it all incredibly quickly. In this guide, Chris Vander Mey provides a simplified, no-BS approach to the entire software lifecycle, distilled from lessons he learned as a manager at Amazon and Google. In the first part of the book, you'll learn a step-by-step shipping process used by many of the best teams at Google and Amazon. Part II shows you the techniques, best practices, and skills you need to face an array of challenges in product, program, project, and engineering management. Clearly define your product and develop your mission and strategy Assemble your team and understand enough about systems to communicate with them Create a beautiful, intuitive, and simple user experience Track your team's deliverables and closely manage the testing process Communicate clearly to gracefully handle requests, senior-management interactions, and feedback from various sources Build metrics to track progress, spot problems, and celebrate success Stick to your launch checklist and plan for marketing and PR

Location-based Services (LBSs) are mobile services for providing information that has been created, compiled, selected or filtered under consideration of the users' current locations or those of other persons or mobile devices. Typical examples are restaurant finders, buddy trackers, navigation services or applications in the areas of mobile marketing and mobile gaming. The attractiveness of LBSs is due to the fact that users are not required to enter location information manually but are automatically pinpointed and tracked. This book explains the fundamentals and operation of LBSs and gives a thorough introduction to the key technologies and organizational procedures, offering comprehensive coverage of positioning methods, location protocols and service platforms, alongside an overview of interfaces, languages, APIs and middleware with examples demonstrating their usage. Explanation and comparison of all protocols and architectures for location services In-depth coverage of satellite, cellular and local positioning All embracing introduction to 3GPP positioning methods, such as Cell-Id, E-OTD, U-TDoA, OTDoA-IPDL and Assisted GPS Explains the operation of enhanced emergency services such as E-911 Identifies unsolved research issues and challenges in the area of LBSs This comprehensive guide will be invaluable to undergraduate and postgraduate students and lecturers in the area of telecommunications. It will also be a useful resource to developers and researchers seeking to expand their knowledge in this field.

This textbook presents all the latest information on all aspects of each important component of ATM - the hottest telecommunications technology of this decade. It demonstrates how ATM internetworks several incompatible telecommunications technologies and provide the high-speed, high bandwidth backbone network that the entire telecom industry is converging toward.

The rapid advances and industry demands for networked delivery of information and pictures through computer networks and cable television has created a need for new techniques and standards for the packaging and delivery of digital information. Multimedia Communications presents the latest information from industry and academic experts on all standards, methods and protocols. Internet protocols for wireless communications, transcoding of Internet multimedia for universal access, ATM and ISDN chapters, videoconferencing standards, speech and audio coding standards, multi-casting and image compression techniques are included. Latest Internet protocols for wireless communications Transcoding of Internet multimedia for universal access ATM and ISDN chapters Videoconferencing standards Speech and audio coding standards Multi-casting Latest image compression techniques

This research project has been supported by the Ford Foundation, the Lynch School of Education at Boston College, and the Program of Research on Private Higher Education at the University at Albany.

This fascinating story explores the dimensions of friendship and family, of loyalty and love ... among people who are essentially good and caring, and generally wanting to do the right thing. But no one is perfect. Alan Colmar had been at a crossroads. Again. His third wife, Sylvie, rescued him from the wildness of his earlier personal life, which he carried into his 40s, while maintaining his successful career as a graphic designer. In his late 50s, she now was gone - a staggering blow. His commitment to his career, and the company he co-owns with his partner, was wavering. And, he was so alone. A divorced magazine reporter, Carol Buley, interviews him for an article on how men recover from losing a wife. They become friends; he meets her two adult children who quickly come to adore him. Alan's and Carol's relationship grows despite some uncertainty. Individually and collectively, Carol's family provides Alan needed stability and joy. And then ... Alan suffers a sudden, unexpected health crisis, triggering uncertainty in the minds of his friends and his estranged family. Who cares the most? Who is most responsible? Who acts? Who decides? We come to know these people very well.

This best selling text on computer organization has been thoroughly updated to reflect the newest technologies. Examples highlight the latest processor designs, benchmarking standards, languages and tools. As with previous editions, a MIPS processor is the core used to present the fundamentals of hardware technologies at work in a computer system. The book presents an entire MIPS instruction set--instruction by instruction--the fundamentals of assembly language, computer arithmetic, pipelining, memory hierarchies and I/O. A new aspect of the third edition is the explicit connection between program performance and CPU performance. The authors show how hardware and software components--such as the specific algorithm, programming language, compiler, ISA and processor implementation--impact program performance. Throughout the book a new feature focusing on program performance describes how to search for bottlenecks and improve performance in various parts of the system. The book digs deeper into the hardware/software interface, presenting a complete view of the function of the programming language and compiler--crucial for understanding computer organization. A CD provides a toolkit of simulators and compilers along with tutorials for using them. For instructor resources click on the grey "companion site" button found on the right side of this page. This new edition represents a major revision. New to this edition: \* Entire Text has been updated to reflect new technology \* 70% new exercises. \* Includes a CD loaded with software, projects and exercises to support courses using a number of tools \* A new interior design presents defined terms in the margin for quick reference \* A new feature, "Understanding Program Performance" focuses on performance from the programmer's perspective \* Two sets of exercises and solutions, "For More Practice" and "In More Depth," are included on the CD \* "Check Yourself" questions help students check their understanding of major concepts \* "Computers In the Real World" feature illustrates the diversity of uses for information technology \*More detail below...

Highlighting trends and realities of private higher education around the world, this book is organized into two sections. The first deals with international trends and issues, while the second--much longer--section focuses on countries and regions. (Education)

[Vol. 2:] contributions from representatives of international and regional organizations and telecommunication operators and manufacturers / official statements and addresses.

This concise and clear introduction to the topic requires only basic knowledge of calculus and linear algebra - all other concepts and ideas are developed in the course of the book. Lucidly written so as to appeal to undergraduates and practitioners alike, it enables readers to set up simple mathematical models on their own and to interpret their results and those of others critically. To achieve this, many examples have been chosen from various fields, such as biology, ecology, economics, medicine, agricultural, chemical, electrical, mechanical and process engineering, which are subsequently discussed in detail. Based on the author's modeling and simulation experience in science and engineering and as a consultant, the book answers such basic questions as: What is a mathematical model? What types of models do exist? Which model is appropriate for a particular problem? What are simulation, parameter estimation, and validation? The book relies exclusively upon open-source software which is available to everybody free of charge. The entire book software - including 3D CFD and structural mechanics simulation software - can be used based on a free CABLELinux-Live-DVD that is available in the Internet (works on most machines and operating systems).
