A radically empirical exploration of movement and technology and the transformations of choreography in
a digital realm. Digital technologies offer the possibility of capturing, storing, and manipulating
movement, abstracting it from the body and transforming it into numerical information. In Moving without
a Body, Stamatia Portanova considers what really happens when the physicality of movement is translated
into a numerical code by a technological system. Drawing on the radical empiricism of Gilles Deleuze and
Alfred North Whitehead, she argues that this does not amount to a technical assessment of software's
capacity to record motion but requires a philosophical rethinking of what movement itself is, or can
become. Discussing the development of different audiovisual tools and the shift from analog to digital,
she focuses on some choreographic realizations of this evolution, including works by Loie Fuller and
Merce Cunningham. Throughout, Portanova considers these technologies and dances as ways to think—rather
than just perform or perceive—movement. She distinguishes the choreographic thought from the
performance: a body performs a movement, and a mind thinks or choreographs a dance. Similarly, she sees
the move from analog to digital as a shift in conception rather than simply in technical realization.
Analyzing choreographic technologies for their capacity to redesign the way movement is thought, Moving
without a Body offers an ambitiously conceived reflection on the ontological implications of the
encounter between movement and technological systems.

Low End Theory probes the much-mythologized field of bass and low-frequency sound. It begins in music
but quickly moves far beyond, following vibratory phenomena across time, disciplines and disparate
cultural spheres (including hauntings, laboratories, organ workshops, burial mounds, sound art, studios,
dancefloors, infrasonic anomalies, and a global mystery called The Hum). Low End Theory asks what it is
about bass that has fascinated us for so long and made it such a busy site of bio-technological
experimentation, driving developments in science, technology, the arts, and religious culture. The
guiding question is not so much what we make of bass, but what it makes of us: how does it undulate and
unsettle; how does it incite; how does it draw bodily thought into new equations with itself and its
surroundings? Low End Theory is the first book to survey this sonorous terrain and devise a conceptual
language proper to it. With its focus on sound's structuring agency and the multi-sensory aspects of
sonic experience, it stands to make a transformative contribution to the study of music and sound, while
pushing scholarship on affect, materiality, and the senses into fertile new territory. Through energetic
and creative prose, Low End Theory works to put thought in touch with the vibratory encounter as no
scholarly book has done before. For more information, visit: http://www.lowendtheorybook.com/

»Digital media« is increasingly finding its way into the discussions of the humanities classroom. But
while there is a number of grand theoretical texts about digital literature there as yet is little in
the way of resources for discussing the down-to-earth practices of research, teaching, and curriculum
necessary for this work to mature. This book presents contributions by scholars and teachers from
different countries and academic environments who articulate their approach to the study and teaching of
digital literature and thus give a broader audience an idea of the state-of-the-art of the subject
matter also in international comparison.

This Companion provides an authoritative source for scholars and students of the nascent field of media geography. While it has deep roots in the wider discipline, the consolidation of media geography has started only in the past decade, with the creation of media geography's first dedicated journal, Aether, as well as the publication of the sub-discipline's first textbook. However, at present there is no other work which provides a comprehensive overview and grounding. By indicating the sub-discipline's evolution and hinting at its future, this volume not only serves to encapsulate what geographers have learned about media but also will help to set the agenda for expanding this type of interdisciplinary exploration. The contributors-leading scholars in this field, including Stuart Aitken, Deborah Dixon, Derek McCormack, Barney Warf, and Matthew Zook-not only review the existing literature within the remit of their chapters, but also articulate arguments about where the future might take media geography scholarship. The volume is not simply a collection of individual offerings, but has afforded an opportunity to exchange ideas about media geography, with contributors making connections between chapters and developing common themes.

An indispensable resource for instructors and students in digital studies programs, Critical Digital Studies is a comprehensive, creative, and fascinating look at a digital culture that is struggling to be born, survive, and flourish."--Publisher description.

The author discusses the performance aspects of such political events as the breaching of the Berlin wall and the destruction of Sarajevo, and examines the use of video and agitprop performance in political activity, including protests by the gay activist group ACT UP and the disquieting performances of the former pornography actress and sex worker Annie Sprinkle. Birringer ends with a discussion of the continuing incursions of business into digital media, including the "imperialism of technological enhancements" as experienced in the culture of constant "upgrades" and the omnipresence of Bill Gates.

Making Images Move reveals a new history of cinema by uncovering its connections to other media and art forms. In this richly illustrated volume, Gregory Zinman explores how moving-image artists who worked in experimental film pushed the medium toward abstraction through a number of unconventional filmmaking practices, including painting and scratching directly on the film strip; deteriorating film with water, dirt, and bleach; and applying materials such as paper and glue. This book provides a comprehensive history of this tradition of "handmade cinema" from the early twentieth century to the present, opening up new conversations about the production, meaning, and significance of the moving image. From painted film to kinetic art, and from psychedelic light shows to video synthesis, Gregory Zinman recovers the range of forms, tools, and intentions that make up cinema's shadow history, deepening awareness of the intersection of art and media in the twentieth century, and anticipating what is to come.

Regain your ability to move and live a life free of aches and pains.The digital lifestyle has changed the way we use, or underuse, our body and joints, giving rise to the prevalence of aches and pains in most of us. For so long, we have been training to build fitness, with our emphasis placed primarily on acquiring cardiovascular endurance and strength. But this is not enough – we need to redefine fitness and focus on building mobility fitness, which is essentially developing strength, flexibility, and quality of movement, so that our joints are capable of moving to its full range of motion and stay healthy. Within the pages of this book, you will: • Understand how the different parts of your body move • Learn how the lack of mobility in your joints is the leading cause for aches and pains • Master the 5 steps to achieve mobility fitness and live a pain-free life • Discover how it is possible to regain your energy to stay at peak performance and live a life full of vitality

This collection examines the peculiarly modern phenomenon of voyeurism as it is experienced through the digital screen. Violence, voyeurism, and power populate film more than ever, and the centrality of the terrified body to many digital narratives suggests new forms of terror and angst, where bodies are subjected to an endless knowing look. The particular perils of the digital age can be seen on, by, and through screen bodies as they are made, remade, represented, and used. The essays in this book examine the machinations of voyeurism in the digital age and the realization of power through digital visual forms. They look at the uses of power over the female body, at the domination and repression of women through symbolic violence, at discourses of power as they are played out onscreen, and at how the digital realm might engage the active/passive dichotomy in new ways.

A host of both very old and entirely new liturgical practices have arisen in digital mediation, from the live-streaming of worship services and "pray-as-you-go" apps, to digital prayer chapels, virtual choirs and online pilgrimages. Cyberspace now even hosts communities of faith that exist entirely online. These digitally mediated liturgical practices raise challenging questions: Are worshippers in an online chapel really a community at prayer? Do avatars that receive digital bread and wine receive communion? @ Worship proposes a nuanced response to these sometimes contentious issues, rooted in familiarity with, and sustained attention to, actual online practices. Four major thematic lines of inquiry form the structure of the book. After an introductory chapter the following chapters look at digital presence, virtual bodies, and online participation; ecclesial communities in cyberspace; digital materiality, visuality, and soundscapes; and finally the issues of sacramental mediation online. A concluding chapter brings together the insights from the previous chapters and maps a way forward for reflections on digitally mediated liturgical practices. @ Worship is the first monograph dedicated to exploring online liturgical practices that have emerged since the introduction of Web 2.0. Bringing together the scholarly tools and insights of liturgical studies, constructive theology and digital media theories, it is vital reading for scholars of Theology and Religion with as well as Sociology and Digital Culture

more generally.
