This book examines the connections between natural resources, tourism and community livelihood practices in Southern Africa, highlighting the successes and constraints experienced over the last 50 years. Questioning how natural resources, tourism and community livelihoods relations can positively contribute towards development efforts, this book adopts an interdisciplinary approach to understand socio-ecological systems that characterize the dynamics for sustainable development. It explores the history of conservation and natural resource management in Southern Africa and traces the development and growth of nature-based tourism. Boasting a wide range of tourism landscapes, including national parks, wetlands, forests and oceans, the book draws on case studies from a variety of Southern African countries, including Botswana, Namibia and South Africa, and considers the political challenges for implementing policies and practices. Furthermore, it analyses broader issues such as the impact of climate change, human-wildlife co-existence and resulting conflicts, poor access to funding and poverty in local communities. The book argues that the links between conservation and livelihoods can be best understood by considering the different approaches to reconciling the demands of conservation and livelihoods that have evolved over the past decades. Containing contributions from natural and social sciences the book provides guidance for practitioners and policymakers to continue to shape policies and practices that are in line with the key tenets of sustainable development. It will also be of great interest to students and scholars researching Southern Africa, sustainable tourism and conservation.

The publication provides the first comprehensive text that reflects on a century of the development of geography as an academic discipline at South African universities. The book showcases a broad and

Read Online Mpumalanga Department Of Education Geograph March 2014 Question Paper Grade12

textured review of South Africa's geography departments, their staff members, their times, and the different Geographies they engaged in. The book lays the foundation from which more expansive individual departmental histories can be written in the future.

This book examines the nexus between conservation, land conflicts and sustainable tourism approaches in Southern Africa, with a focus on equity, access, restitution and redistribution. While Southern Africa is home to important biodiversity, pristine woodlands and grasslands, and is a habitat for important wildlife species, it is also a land of contestations over its natural resources with a complex historical legacy and a wide variety of competing and conflicting issues surrounding race, cultural and traditional practices and neoliberalism. Drawing on insights from conservation, environmental and tourism experts, this volume presents the nexus between land conflicts and conservation in the region. The chapters reveal the hegemony of humans on land and associated resources including wildlife and minerals. By using social science approaches, the book unites environmental, scientific, social and political issues as it is imperative we understand the holistic nature of land conflicts in nature-based tourism. Discussing the management theories and approaches to community-based tourism in communities where there is or were land conflicts is critical to understanding the current state and future of tourism in African rural spaces. This volume determines the extent to which land reform impacts community-based tourism in Africa to develop resilient destination strategies and shares solutions to existing land conflicts to promote conservation and nature-based tourism. The book will be of great interest to students, academics, development experts, and policymakers in the field of conservation, tourism geography, sociology, development studies, land use and environmental management and African studies.

This book embraces South Africa and its place in the Global South, providing a succinct theoretical and empirical analysis and discussion of urban issues in the country. There have been sporadic calls from the Urban Geography community for the development of an overarching and comprehensive text that explores contemporary processes and practices taking place in urban South Africa and, more widely, the Global South. This is an edited collection of chapters by leading urban theorists and practitioners working on various themes within urban South Africa and serves as a base for scholars and students interested in urban perspectives from countries in the Global South.

The argumentative point of departure of this scholarly book is the common conviction of specialists in the field of education in South Africa that the national education system is not at a satisfactory level – in both the academic and the public discourse. Such allegations are made and, frequently, stronger adjectives than ‘non-satisfactory’ are used. Results of international test series in which South Africa has participated, such as the 2015 TIMSS tests, confirm the negative verdicts found in the (public and scholarly) discourse. This book aims to argue that although the lack of performance could be attributed to a multiplicity of factors, one factor that can make a difference in the achievement levels obtained by learners in schools is leadership. The book demonstrates that a particular problem of both the scholarly and the public discourse on education in South Africa is an overtone of defeatism or resignation, blaming all ills in the education system and educational institutions on historical legacies and/or contextual factors (such as socio-economic deprivation in the catchment areas of schools) or poor resources and infrastructure. This collected work was inspired by a recently published spate of articles on top-performing schools (including top-performing schools in rural communities), in which it was demonstrated that good leadership can overcome such contextual and other challenges. The book unpacks the issue of leadership in South African schools from a variety of perspectives, thus contributing to the development of the scholarly discourse on Educational Leadership in South Africa. The target audience of the book is scholars of Educational Leadership. The research reported in the chapters draw on a wide range of methodologies, including empirical (survey) research (questionnaires

and interviews), critical literature surveys, and the comparative method.

Access to water and sanitation remains a critical challenge in various countries in Africa. The crisis remains the crisis of governance rather than the physical and economic scarcity. In most countries, water is realized as a human right and subsidies are provided for the indigent households. The tricky issue in rural areas remains an issue of access that is often linked to willingness and ability to pay for the installation and daily consumption. The Handbook of Research on Resource Management and the Struggle for Water Sustainability in Africa presents practical examples of integrated water resources management (IWRM) implementation in African countries. It further addresses the contemporary issues of alternative energy as part of climate change mitigation and utilizes case studies to examine how communities adapt to climate change. Covering topics such as climate justice, ecological governance, and political ecology, this major reference work is a dynamic resource for government officials, sociologists, climate scientists, activists, students and educators of higher education, academicians, and researchers in the fields of social sciences, government, developmental studies, international relations, and political science.

The dismantling of the apartheid regime in South Africa caused massive transformation in both geographical and economic terms, not only in this country but also in the region as a whole. As the post-apartheid government enters its second term, this captivating volume assesses its progress in unravelling the geography of apartheid, both in South Africa itself and in its relationships with other countries in Southern Africa and Africa. It also considers the ways in which South Africa, now that it is no longer a pariah state, has begun to position itself within the current global economy. Examining South Africa's land and agriculture, mining and minerals, manufacturing, tourism, corporate finance, the labour market and transport, the volume discusses the challenges of balancing growth and redistribution, the extent and nature of progress, change and relationships within the regional and global economy. A compelling investigation into the economics of South Africa's neighbouring states in relation to their natural resources, colonialism and inter-relationships with themselves and with South Africa leads to a focus on the region as a whole and its relations with the global economy.
