A #1 New York Times Bestseller A Wall Street Journal Bestseller A USA Today Bestseller The creators of the New York Times bestselling picture books Rosie Revere, Engineer and Iggy Peck, Architect are back with a story about the power of curiosity in the hands of a child who is on a mission to use science to understand her world. Ada Twist, Scientist, from powerhouse team Andrea Beaty and David Roberts, is a celebration of STEM, perseverance, and passion. Like her classmates, builder Iggy and inventor Rosie, scientist Ada, a character of color, has a boundless imagination and has always been hopelessly curious. Why are there pointy things stuck to a rose? Why are there hairs growing inside your nose? When her house fills with a horrific, toe-curling smell, Ada knows it’s up to her to find the source. What would you do with a problem like this? Not afraid of failure, Ada embarks on a fact-finding mission and conducts scientific experiments, all in the name of discovery. But, this time, her experiments lead to even more stink and get her into trouble! Inspired by real-life makers such as Ada Lovelace and Marie Curie, Ada Twist, Scientist champions girl power and women scientists, and brings welcome diversity to picture books about girls in science. Touching on themes of never giving up and problem solving, Ada comes to learn that her questions might not always lead to answers, but rather to more questions. She may never find the source of the stink, but with a supportive family and the space to figure it out, she’ll be able to feed her curiosity in the ways a young scientist should. Iggy Peck and Rosie Revere have earned their places among the most beloved children’s characters, and they have inspired countless kids and adults to follow their dreams and passions. Now in her own charming and witty picture book, determined Ada Twist, with her boundless curiosity for science and love of the question “Why?,” is destined to join these two favorites. The book is the perfect tool to remind both young girls and women that they have the intelligence and perseverance to achieve their dreams.

Many scientists and engineers consider themselves poor writers or find the writing process difficult. The good news is that you do not have to be a talented writer to produce a good scientific paper, but you do have to be a careful writer. In particular, writing for a peer-reviewed scientific or engineering journal requires learning and executing a specific formula for presenting scientific work. This book is all about teaching the style and conventions of writing for a peer-reviewed scientific journal. From structure to style, titles to tables, abstracts to author lists, this book gives practical advice about the process of writing a paper and getting it published.

From Galileo to scientists working on cloning, notebooks have been used to document scientific discovery. Science notebooks are also effective tools in the classroom. They make science experiences more meaningful and authentic for students as they observe, record, and reflect on what they’ve learned. For time-strapped teachers, notebooks offer a natural way to integrate science and language arts. Brian Campbell and Lori Fulton spent four years investigating the use of science notebooks by students, teachers, and practicing scientists. This book not only details what they learned, it serves as a ready resource of strategies and methods for teachers to incorporate science notebooks into their school day. Along the way, the book intersperses additional help: Classroom vignettes demonstrate how science notebooks actually function in class. Student samples allow readers to see student entries at a variety of levels. Thinking points throughout link ideas presented in the book to practice and philosophical beliefs. Connections to standards--both the National Science Education Standards and the Standards for the English Language Arts - reinforce the rationale for using science notebooks to develop scientific concepts AND literacy. Use science notebooks and watch as your students write as scientists do, share their thinking, support their ideas with evidence, and improve their literacy through reading, writing, and speaking.

Introduces youngsters to the many things that encompass the study of science, such as stars, planets, rocks, and soil, using accessible text and bright illustrations.

Textbooks are symbols of centuries-old education. They’re often outdated as soon as they hit students’ desks. Acting “by the textbook” implies compliance and a lack of creativity. It’s time to ditch those textbooks--and those textbook assumptions about learning In Ditch That Textbook, teacher and blogger Matt Miller encourages educators to throw out meaningless, pedestrian teaching and learning practices. He empowers them to evolve and improve on old, standard, teaching methods. Ditch That Textbook is a support system, toolbox, and manifesto to help educators free their teaching and revolutionize their classrooms.

A young boy creates a summer playhouse by planting sunflowers and saves the seeds to make another house the next year.

Properties of Matter from Hands-On Science: An Inquiry Approach completely aligns with BC’s New Curriculum for science. Grounded in the Know-Do-Understand model, First Peoples knowledge and perspectives, and student-driven scientific inquiry, this custom-written resource: emphasizes Core Competencies, so students engage in deeper and lifelong learning develops Curricular Competencies as students explore science through hands-on activities fosters a deep understanding of the Big Ideas in science Using proven Hands-On features, Properties of Matter contains information and materials for both teachers and students including: Curricular Competencies correlation charts; background information on the science topics; complete, easy-to-follow lesson plans; reproducible student materials; and materials lists. Innovative new elements have been developed specifically for the new curriculum: a multi-age approach a five-part instructional process—Engage, Explore, Expand, Embed, Enhance an emphasis on technology, sustainability, and personalized learning a fully developed assessment plan for summative, formative, and student self-assessment a focus on real-life Applied Design, Skills, and Technologies learning centres that focus on multiple intelligences and universal design for learning (UDL) place-based learning activities, Makerspaces, and Loose Parts In Properties of Matter students investigate matter. Core Competencies and Curricular Competencies will be addressed while students explore the following Big Ideas: Humans interact with matter every day through familiar materials. Materials can be changed through physical and chemical processes. Matter is useful because of its properties. Other Hands-On Science books for grades 3-5 Living Things Properties of Energy Land, Water, and Sky

Living Things from Hands-On Science: An Inquiry Approach completely aligns with BC’s New Curriculum for science. Grounded in the Know-Do-Understand model, First Peoples knowledge and perspectives, and student-driven scientific inquiry, this custom-written resource: emphasizes Core Competencies, so students engage in deeper and lifelong learning develops Curricular Competencies as students explore science through hands-on activities fosters a deep understanding of the Big Ideas in science Using proven Hands-On features, Living Things contains information and materials for both teachers and students including: Curricular Competencies correlation charts; background information on the science topics; complete, easy-to-follow lesson plans; reproducible student materials; and materials lists. Innovative new elements have been developed specifically for the new curriculum: a multi-age approach a five-part instructional process—Engage, Explore, Expand, Embed, Enhance an emphasis on technology, sustainability, and personalized learning a fully developed assessment plan for summative, formative, and student self-assessment a focus on real-life Applied Design, Skills, and Technologies learning centres that focus on multiple intelligences and universal design for learning (UDL) place-based learning activities, Makerspaces, and Loose Parts In Living Things students investigate plants and animals. Core Competencies and Curricular Competencies will be addressed while students explore the following Big Ideas: Plants and animals have observable features. Living things have features and behaviours that help them survive in their environment. Living things have life cycles adapted to their environment.
