The Embodied Playbook discovers a new approach to understanding student literacy in a surprising place: the university athletics department. Through analysis of a yearlong case study of the men ' s basketball team at the University of North Georgia, J. Michael Rifenburg shows that a deeper and more refined understanding of how humans learn through physical action can help writing instructors reach a greater range of students. Drawing from research on embodiment theory, the nature and function of background knowledge, jazz improvisation, and other unexpected domains, The Embodied Playbook examines a valuable but underserved form of literacy: the form used by student-athletes when learning and using scripted plays. All students ' extracurricular prior knowledge is vital for the work they undertake in the classroom, and student-athletes understand the strengths and constraints of written text much as they understand the text of game plays: through embodying text and performing it in a competitive space. The book focuses on three questions: What are plays and what do they do? How do student-athletes learn plays? How can teachers of composition and rhetoric better connect with student-athletes? The Embodied Playbook reveals the literacy of the body as a rich and untapped resource for writing instruction. Given the numbers of students who are involved in athletics, whether intramural, community-related, or extracurricular, Rifenburg ' s conclusions hold important implications not only for how we define literacy but also for how writing programs can serve all of their students most effectively.

School-aged children in the U.S. and other Western nations spend almost half of their waking hours in leisure activities. For some, out-of-school time is perceived as inconsequential or even counterproductive to the health and well-being of young persons. Recently, however, there has been a growing recognition that--along with family, peers, and school--the organized activities in which some youth participate during these hours are important contexts of emotional, social, and civic development. They provide opportunities for young persons to learn and develop competencies that are largely neglected by schools. At the same time, communities and national governments are now channeling considerable resources into creating organized activities for young people's out-of-school time. This volume brings together a multidisciplinary, international group of experts to provide conceptual, empirical, and policy-relevant advances in research on children's and adolescents' participation in the developmental contexts represented by extracurricular activities, and after-school and community programs. Organized Activities as Contexts of Development provides a handbook-like coverage of research in this new emerging field. It considers a broad developmental time-span from middle childhood through early adulthood, providing information on how motivation, participation, and developmental experiences change as youth get older. The contents cover one of the most salient topics in child and adolescent research, education, and social policy, placing consistent emphasis on developmental aspects and implications of organized activity participation for young persons. Representing contributors from several fields of study--psychology, criminal justice, leisure science, sociology, human development, education, prevention, and public policy--the book is designed to appeal to students and scholars in all these areas. Additionally, the volume is written to be of interest to professionals who administer programs and develop policy on youth.
