Injuries, accidents and wounds | Topic | NICE

This document summarises the evidence base on wound care products. It is a key therapeutic topic that has been identified to support medicines optimisation. It is not formal NICE guidance. This key therapeutic topic was updated in September 2019.

Overview | Wound care products | Advice | NICE

Appropriate wound and dressing care promotes healing and reduces the risk of infection. Providing information and advice on this to people having surgery and their carers will reduce the risk of them doing something to the wound or dressing that might contaminate the site with microorganisms unnecessarily. If a person develops a surgical site infection, early treatment is essential to prevent the infection getting worse.

Next. This guideline covers preventing and treating surgical site infections in adults, young people and children who are having a surgical procedure involving a cut through the skin. It focuses on methods used before, during and after surgery to minimise the risk of infection. In August 2020, we added links to the NICE guideline on perioperative care in adults for additional recommendations on intravenous fluids, cardiac monitoring and blood glucose control in adults.

Surgical site infections: prevention and treatment - NICE

Wound Care HS-216 Wound care includes, but is not limited to ulcers, pressure ulcers, open surgical sites, fistulas, tube sites and tumor erosion sites when the skills of a licensed therapist, qualified wound care nurse, nurse or physician/physician extender are required to safely and effectively provide the care necessary for their treatment.

New guidance from the National Institute for Health and Care Excellence (NICE) supports the case for adopting PICO Single Use Negative Pressure Wound Therapy System (sNPWT) as a treatment option for closed surgical incisions in high-risk patients. The guidance, including clinical evidence (i) and cost-analyses, highlights reductions in surgical site infection and seroma, compared to standard care 1.

NICE best practice guidelines for PICO | Smith+Nephew ...

Primary care management of a laceration involves: Cleaning, closing, and dressing wounds at low risk of infection. Infected wounds or wounds at high risk of infection should be cleaned and dressed initially; secondary closure can be considered after a few days, provided there are no signs of infection.

Infections that occur in the wound created by an invasive surgical procedure are generally referred to as surgical site infections (SSIs). SSIs are one of the most important causes of healthcare-associated infections (HCAIs). A prevalence survey undertaken in 2006 suggested that approximately 8% of patients in hospital in the UK have an HCAI. SSIs accounted for 14% of these infections and nearly 5% of patients who had undergone a surgical procedure were found to have developed an SSI. However, prevalence studies tend to underestimate SSI because many of these infections occur after the patient has been discharged from hospital. SSIs are associated with considerable morbidity and it has been reported that over one-third of postoperative deaths are related, at least in part, to SSI. However, it is important to recognise that SSIs can range from a relatively trivial wound discharge with no other complications to a life-threatening condition. Other clinical outcomes of SSIs include poor scars that are cosmetically unacceptable, such as those that are spreading, hypertrophic or keloid, persistent pain and itching, restriction of movement, particularly when over joints, and a significant impact on emotional wellbeing. SSI can double the length of time a patient stays in hospital and thereby increase the costs of health care. Additional costs attributable to SSI of between £814 and £6626 have been reported depending on the type of surgery and the severity of the infection. The main additional costs are related to re-operation,

extra nursing care and interventions, and drug treatment costs. The indirect costs, due to loss of productivity, patient dissatisfaction and litigation, and reduced quality of life, have been studied less extensively.

Expanded and completely updated with the newest wound care products, this handbook is the only all-in-one portable guide to wound care and prevention strategies with more than 300 dressings, drugs, and other products for every type of wound. Part I provides detailed guidelines on wound care and prevention and related professional and legal issues. Part II features profiles and photographs of over 300 wound care products. Part III contains charts of over 200 additional dressings and products. Appendices include assessment tools and multiple treatment algorithms. A manufacturer resource guide includes addresses, telephone numbers, Websites, and manufacturer-sponsored educational programs.

Accelerate your skin and wound care with the Clinical Guide to Skin and Wound Care, Seventh Edition. This compact and sensibly organized guide is vital to providing optimal care. Look forward to: * Updated advice on skin care products helps you make the right choices. * Current documentation regulations, so that you can properly illustrate wound healing. * New chapters on lymphedema and best practices. * Profiles of more than 300 products, in A to Z organization for easy identification. * Benchmark outcomes help you take your care to the next level... and more. You'll accurately assess, plan, and monitor wound care using the most current, best nursing practices. This useful resource will help both clinicians and institutions deliver wound care that's both appropriate for patient needs and cost-effective for the institution. Featuring important new information on documentation regulations, including helpful checklists, and offering take-away highlights in every chapter, this useful resource also provides new content on lymphedema management guidelines, negative pressure wound therapy, and capturing data using today's media capabilities. Part 1 covers the fundamentals of skin and wound care, including assessment, treatment, prevention, nutrition, and documentation. From identifying patients at risk for wounds to achieving compliance for self-care, this is the companion you'll rely on day after day. You'll gain a deeper understanding of chronic wounds, accurately interpret lab values and adapt your care, develop a proper skin and wound care formulary, expertly manage tissue load, and understand and apply the wound care regulatory process. Part 2 offers profiles and photos of hundreds of skin and wound care products, all categorized and alphabetized for easy reference. You'll find a wealth of NEW advice on the skin care products you use most, including cleansers, moisture barriers, antifungal and antimicrobial treatments, therapeutic moisturizers, liquid skin protectants, and others. The Seventh edition of Clinical Guide to Skin and Wound Care also includes a full-color wound photo section, wound checklists, and much more.

Prevent and manage wounds with this expert, all-inclusive resource! Acute & Chronic Wounds: Current Management Concepts, 5th Edition provides the latest diagnostic and treatment guidelines to help you provide quality care for patients with wounds. This textbook presents an interprofessional approach to maintaining skin integrity and managing the numerous types of skin damage including topics that range from the physiology of wound healing, general principles of wound management, vulnerable patient populations, management of percutaneous tubes, and specific care instructions to program development. Written by respected

nursing educators Ruth Bryant and Denise Nix, this bestselling reference also provides excellent preparation for all wound certification exams. A comprehensive approach to the care of patients with acute and chronic wounds guides students and health care providers to design, deliver and evaluate quality skin and wound care in a systematic fashion; the comprehensive approach includes the latest advances in diagnosis, differentiation of wound types, nutrition, prevention, treatment, and pharmacology. Self-assessment questions and answers in each chapter help you assess your knowledge and prepare for all wound certification exams. Checklists offer a concise, easy-to-read summary of the steps needed to achieve the best patient care outcomes. Risk assessment scales help in determining a patient's risk for developing a wound, and wound classification tools identify the proper terminology to be used in documentation. Learning objectives at the beginning of each chapter focus your study on the most important content. Principles for practice development boost outcomes and productivity in agencies and institutions, home care, acute care, long-term care, and long-term acute care settings. NEW coverage includes the latest guidelines from WOCN, AAWC, NPUAP, EPUAP, and PPIA, and the American College of Physicians. New sections cover the prevention and management of biofilm, the new skin tear classification system, MASD and MARCI, CTP terminology and classification scheme, and integration of the Health Belief Model. NEW! Additional full-color photographs show the differential diagnosis of types of skin damage, management of fistulas, and NPWT procedures. NEW! Clinical Consult features help in applying concepts to clinical practice, showing students and health care professionals how to assess, manage, and document real-life patient and staff encounters using the ADPIE framework. NEW two-color illustrations and design make the book more visually appealing.

The Care of Wounds addresses all aspects of holistic wound management. The fourth edition of this successful clinical text continues to reflect current research and evidence-based practice, while incorporating the considerable developments which have occurred in wound care practice since the previous edition. It includes chapters on the physiology of wound healing, general principles of wound management, wound management products, and the management of patients with both acute and chronic wounds. The title is an essential read for all nurses and healthcare professionals working in the field of tissue viability and wound healing. Comprehensive and clinically-oriented Examines best practice in wound management Incorporates national and international clinical guidelines where applicable Superbly illustrated with full colour throughout

concise guidance on the latest techniques and strategies for treating lacerations, wounds, and burns. This medical reference book will help you optimize every aspect of patient care based on current literature and guidelines. Expedite review and reference with a bulleted "Key Practice Points" section at the beginning of each chapter. Quickly reference the latest recommendations for tetanus and rabies prophylaxis. Implement the latest approaches for the use of ultrasound in foreign-body detection and removal; use of absorbable sutures on the face and hand; approaching complicated infections such as MRSA; managing chronic wounds seen in elderly and diabetic patients; applying new suture techniques and materials for pediatric patients; and updated recommendations for tetanus and rabies prophylaxis. Get step-by-step visual guidance on all aspects of wound care through more than 300 detailed line drawings and photographs showing techniques for wound assessment, irrigation, closure, wound dressing, foreign body removal, administration of local anesthesia, and follow-up care. Quickly find all the relevant information necessary to treat patients with material that focuses only on injuries that are handled by emergency physicians. On the scene or at the hospital, search the complete contents online at expertconsult.com. Master the art of healing wounds and lacerations with clear, concise guidance on everything from the patient's arrival in the ED to discharge and follow-up care.

Scientific Essay from the year 2006 in the subject Medicine - Other, , course: Bsc, language: English, abstract: Wound care is an integral aspect within dispensation of holistic nursing care. Reflective practice has been established as an effective methodology to learning. This essay takes readers through the journey of reflective practice in the quest of delivering evidence informed nursing care. Due to the fact that I am taking my overseas nurses program in an elderly care set up, I have chosen to explore wound care to augment my existing knowledge and learn new skills to achieve a robust and empirically sound approach in wound management in an elderly care setting. Due to its effectiveness and popularity among authors, I have integrated a critical incident in this essay to form a platform from which to examine reflective nursing practice.

Developing Practical Nursing Skills, Fourth Edition helps you learn and perfect the practical skills required to become a qualified nurse. Patient-focussed and adopting a caring approach, this essential text will also help you to integrate nursing values alongside physical skills in your daily practice. Key features include: Full colour text de
