The true story of a killer nurse whose crimes were hidden by a hospital for years. It's 1980, and Genevieve Jones is working the 3 to 11 PM shift in the pediatric ICU in San Antonio's county hospital. As the weeks go by, infants under her care begin experiencing unexpected complications—and dying—in alarming numbers, prompting rumors that there is a murderer among the staff. Her eight-hour

shift would come to be called “the death shift.” This strange epidemic would continue unabated for more than a year, before Jones is quietly sent off—with a good recommendation—to a rural pediatric clinic. There, eight children under her care mysteriously stopped breathing—and a 15-month-old baby girl died. In May 1984, Jones was finally arrested, leading to a trial that revealed not only her deeply disturbed mind and a willingness to kill, but a desire to play “God” with the lives of the children under her care. More shocking still was that the hospital had shredded records and remained silent about Jones’ horrific deeds, obscuring the full extent of her spree and prompting grieving parents to ask: Why? Elkind chronicles Jones’ rampage, her trials, and the chilling aftermath of one of the most horrific crimes in America, and turns his piercing gaze onto those responsible for its cover-up. It is a tale with special relevance today, as prosecutors, distraught parents, and victims’ advocates struggle to keep Jones behind bars. “A horrifying true-life medical thriller...”—Publishers Weekly “Gripping...A remarkable journalistic achievement!”—Newsweek “Murder, madness, and medicine...superb!”—Library Journal “Shocking...true crime reporting at its most compelling.”—Booklist

Wladimirovich Timofeeff-Ressovsky. The book brings together a number of brief stories/essays about Timofeeff-Ressovsky including "Stories told by himself", and scientific chapters addressing his major research areas: genetics, radiobiology, radiation ecology and epidemiology, and evolution. Timofeeff-Ressovsky contributed to several fields of biology and established new directions of scientific research. He often repeated the phrase, which would later become famous: "Science should not be approached with the ferocity of wild animals". In keeping with that philosophy, the issues discussed here are still open. Each scientific part starts with a current review; the chapters present leading scientific schools and views. The main theme discussed in the genetics part is mutation variability in the context of linear (replication, transcription, translation) and conformational template processes, and its dependence on phylogenetic group. In turn, the radiobiology chapters focus on the reorganization of DNA, cell, and population variability under low-dose irradiation, sparking indirect processes and adaptive response. The radiation ecology and epidemiology parts present data on the consequences of nuclear plants and related accidents for ecological systems and human beings. Here some approaches to estimating radiation risks are also offered. Evolution laws are demonstrated in the genomic

universe, plant-microbe symbiosis, stabilizing and destabilizing (directional) selection. The last essay demonstrates the principles of organization operating in local animal populations, which are approached as social organisms of complex systemic nature. Rose is a princess, a Cinder, and half-human. She is the last one born of her kind, and on her twenty-first birthday, she must enter the woods and travel to find her Prince, as her sisters did before her. ". . . And we will all dance at the Grand Ball," her sisters would always say. But the Human servants are keeping a secret that could prevent the Cinders from reaching their Happily Ever After....Hidden in Rose's dreams and vision are the answers of the past between Cinders and Humans, and she is quickly running out of time trying to solve their hidden messages. She knows the answer lies in her first clue--identifying an animal she has never seen before--that persistent vision of a furry white animal, holding a gold metal object and exclaiming, "Oh dear! Oh dear! I shall be too late!"

The current Symbian Press list focuses very much on the small scale features of Symbian OS in a programming context. The Architecture Sourcebook is different. It's not a how-to book, it's a 'what and why' book. And because it names names as it unwinds the design decisions which have shaped the OS, it is also a 'who' book. It will show where the OS came from, how it has evolved to be what it is, and provide a simple model for understanding what it is, how it is put together, and how to interface to it and work with it. It will also show why design decisions were made, and will bring those decisions to life in the words of Symbian's key architects and developers, giving an insider feel to the book as it weaves the "inside story" around the architectural presentation. The book will describe the OS architecture in terms of the Symbian system model. It will show how the model breaks down the system into parts, what role the parts play in the system, how the parts are architected, what motivates their design, and how the design has evolved through the different releases of the system. Key system concepts will be described; design patterns will be explored and related to those from other operating systems. The unique features of Symbian OS will be highlighted and their motivation and evolution traced and described. The book will include a substantial reference section itemising the OS and its toolkit at component level and

providing a reference entry for each component.
