Cadillac has had a long history in the automotive marketplace as General Motors' luxury car division. During the 1980s, Cadillac's management wanted to reestablish the brand as a leader in sophistication, innovation, refinement and prestige. Engineers conceived a new dual-overhead cam, four-valve-per-cylinder V-8 engine—the Northstar. This power plant was the heart of Cadillac's Northstar System, which included a greatly improved suspension and braking system. The division redesigned its entire line to incorporate these new technologies for the 1990s and beyond. The Northstar was the last engine designed and built by Cadillac before the 2005 establishment of GM Powertrain, which took over engine design for all GM divisions. This history of the Northstar V-8 and the cars it powered covers the first generation front-wheel drive Northstar, the second generation rear-wheel drive model, and the supercharged version, along with racing history and the most collectible Northstar-powered Cadillacs.

Introduced as a 1987 model it was good looking but offered no serious competition to the European sporting cars. For the first two years sales were disappointing. 1989 saw an enlarged engine and reworked suspension and in 1990 it gained ABS and the new North Star V8 engine. However, this was too late and the car was withdrawn from production in 1993. This book is a compilation of contemporary road and comparison tests, technical and specification data, and model introductions. Models include: convertible, Northstar V8.
