A leading economist charts the indirect road to happiness and wealth. Using dozens of practical examples from the worlds of business, politics, science, sports, literature, even parenting, esteemed economist John Kay proves a notion that feels at once paradoxical and deeply commonsensical: The best way to achieve any

manifests itself in nearly every aspect of life. The wealthiest people—from Andrew Carnegie to Bill Gates—achieved their riches through a passion for their work, not because they set materialistic goals. Research has shown that companies whose goal (as declared in mission statements) is excellent products or service are more profitable than companies whose stated goal is increasing profits. In the personal realm, a large body of evidence shows that parenthood is on a daily basis far more frustrating than happy-making. Yet parents are statistically happier than nonparents. Though their short-term pleasure

Once he establishes the ubiquity of obliquity, Kay offers a wealth of practical guidance for avoiding the traps laid by the direct approach to complex problems. Directness blinds us to new information that contradicts our presumptions, fools us into confusing logic with truth, cuts us off from our intuition (which is the subconscious expression of our experience), shunts us away from alternative solutions that may be better than the one we're set on, and more. In *The Logic of Life*, bestselling author Tim Harford quite simply makes sense of this world. Life often seems to defy logic. The receptionist is clearly smarter than the boss who earns fifty times her salary. Arbitrary lines starkly divide the desirable districts of the city from the dangerous ones. Voters flock to the polling booths to elect candidates who'll rip them off to favour special interests. None of it makes logical sense – or does it? Economist and acclaimed author Tim Harford thinks it does. By weaving stories from locations as diverse as a Vegas

When a street prostitute agrees to unprotected sex, or a teenage criminal embarks on a burglary – perhaps especially when a racist employer disregards a black job applicant – we would seem to be a million miles from rational behaviour. Harford shows that, discomfitingly, we are not. It turns out that the unlikeliest of people are complying with the logic of economics and responding to future costs and benefits, often without realizing it; and socially tragic outcomes

In this book, Nobel Prize-winning economist Edmund Phelps draws on a lifetime of thinking to make a sweeping new argument about what makes nations prosper--and why the sources of that prosperity are under threat today. Why did prosperity explode in some nations between the 1820s and 1960s, creating not just unprecedented material wealth but

"flourishing"--meaningful work, self-expression, and personal growth for more people than ever before? Phelps makes the case that the wellspring of this flourishing was modern values such as the desire to create, explore, and meet challenges. These values fueled the grassroots dynamism that was necessary for widespread, indigenous innovation. Most innovation wasn't driven by a few isolated visionaries like Henry Ford and Steve Jobs; rather, it was driven by millions of people empowered to think of, develop, and market innumerable new products and processes, and improvements to existing

ones. Mass flourishing--a combination of material well-being and the "good life" in a broader sense--was created by this mass innovation. Yet indigenous innovation and flourishing weakened decades ago. In America, evidence indicates that innovation and job satisfaction have decreased since the late 1960s, while postwar Europe has never recaptured its former dynamism. The reason, Phelps argues, is that the modern values underlying the modern economy are under threat by a resurgence of traditional, corporatist values that put the community and state over the individual. The ultimate fate

of modern values is now the most pressing question for the West: will Western nations recommit themselves to modernity, grassroots dynamism, indigenous innovation, and widespread personal fulfillment, or will we go on with a narrowed innovation that limits flourishing to a few? A book of immense practical and intellectual importance, *Mass Flourishing* is essential reading for anyone who cares about the sources of prosperity and the future of the West.

of prosperity 'provocative but thought-provoking and nuanced' Telegraph Throughout history, successful societies have created institutions which channel both competition and co-operation to achieve complex goals of general benefit. These institutions make the difference between societies that thrive and those paralyzed by discord, the difference between prosperous and poor economies. Such societies are pluralist but their pluralism is disciplined. Successful societies are also rare and fragile. We could not have built modernity without the exceptional competitive and co-operative instincts of humans, but in

recent decades the balance between these instincts has become dangerously skewed: mutuality has been undermined by an extreme individualism which has weakened co-operation and polarized our politics. Collier and Kay show how a reaffirmation of the values of mutuality could refresh and restore politics, business and the environments in which people live. Politics could reverse the moves to extremism and tribalism; businesses could replace the greed that has degraded corporate culture; the communities and decaying places that are home to many could overcome despondency and again be prosperous and

The finance sector of Western economies is too large and attracts too many of the smartest college graduates. John Kay, with wide practical and academic experience in the world of finance, understands the operation of the financial sector better than most. He believes in good banks and effective asset managers, but good banks and effective asset managers are not what he sees. In a dazzling and revelatory tour of the financial world as it has emerged from the wreckage of the 2008 crisis, Kay does not flinch in his criticism: we do need some of the things that Citigroup

It is an aberration when the some of the finest mathematical and scientific minds are tasked with devising algorithms for the sole purpose of exploiting the weakness of other algorithms for computerized trading in securities.
