Thoroughly revised and updated, this edition provides accurate technical guidance to understanding and building all popular Ford performance engines. This outstanding reference covers the venerable Ford small block and big block engines. Filled with more than 300 photos and hundreds of technical secrets developed by top racers and engine builders. Includes all modern Ford performance engines.

A heartwarming western romance about a cowboy who gets a second chance with his first love in the rugged beauty of the Montana mountains. . . Ben Monroe was the ultimate bad boy - and everyone in Haller Creek knew it. But now as a sheriff's deputy, Ben spends his time breaking up bar fights rather than starting them, and staying away from trouble...until Becca Henderson comes back into town. She's just as beautiful as Ben remembers - and just as far out of his reach. Coming home is exactly what Becca Henderson needed. A place of her own, a successful new business, and a chance to reconnect with the sexy cowboy she had a crush on in school. Ben has always blazed his own path and never let anyone stand in his way. It excites-and scares-her. But when an unexpected threat surfaces, Becca will see just how far Ben will go to protect the woman he loves-and fight for their chance at forever. Also includes the bonus novella Rocky Mountain Cowboy by Sara Richardson! Every reporter in the country wants an exclusive interview with chiseled Olympic heartthrob Jaden Alexander - nicknamed the "Snowboarding Cowboy." But only one of them has the easygoing charm - and breathtaking beauty - to knock Jaden off balance. . .

This book among other things contains a short biography of a nerd. The common pitfalls nerds fall into going through life and how to avoid them. What it is to be a nerd and how a nerds relate to other people. What every nerd wants to know about strippers but is afraid to ask. The alternatives to strip clubs & discos for nerds wanting to meet women. A groundbreaking theory of how consciousness determines reality. A science section which includes how a mission to Mars can be accomplished, the future of robotics and much more. About the Author Denis Joseph Barrow is a freelance computer programmer who has a B.Eng Electronics from the Cork institute of Technology. He formed his own company Aria Software Ireland Ltd in October 1998. His heroes include Nobel Prize winning Physicist Richard Feynman and he enjoys attempting to play guitar and listening to Van Halen and Thin Lizzy in his spare time.

Neural Networks in Robotics is the first book to present an integrated view of both the application of artificial neural networks to robot control and the neuromuscular models from which robots were created. The behavior of biological systems provides both the inspiration and the challenge for robotics. The goal is to build robots which can emulate the ability of living organisms to integrate perceptual inputs smoothly with motor responses, even in the presence of novel stimuli and changes in the environment. The ability of living systems to learn and to adapt provides the standard against which robotic systems are judged. In order to emulate these abilities, a number of investigators have attempted to create robot controllers which are modelled on known processes in the brain and musculo-skeletal system. Several of these models are described in this book. On the other hand, connectionist (artificial neural network) formulations are attractive for the computation of inverse kinematics and dynamics of robots, because they can be trained for this purpose without explicit programming. Some of the computational advantages and problems of this approach are also presented. For any serious student of robotics, Neural Networks in Robotics provides an indispensable reference to the work of major researchers in the field. Similarly, since robotics is an outstanding application area for artificial neural networks, Neural Networks in Robotics is equally important to workers in connectionism and to students for sensor/monitor control in living systems.

He opened his eyes slowly, aware that noise in the room had interrupted his sleep. He stared at the ceiling, studying the familiar lines and cracks that criss-crossed above his head. The pattern the lines and cracks he saw this morning formed what looked like a baseball diamond. He found home base, then 1st, 2nd and 3rd. he heard the crack of bat against ball and could feel the rush of adrenalin required to run to 1st base. The ball went down the middle-he rounded 1st, passed 2nd and stole 3rd when the centerfielder dropped the ball.
