Anergic reactions and anergic diseases are found in many fields of medicine. As wen as affecting the skin, allergic diseases occur in internal organs such as the lungs and the kidneys and in the vascular and nervous systems. Interdisciplinary understanding and cooperation thus seem necessary to get a better insight into allergic reactions in the different fields of medicine in order that we may give our patients the best diagnostic and therapeutic care. Allergic diseases are on the increase. Studies from Sweden show that 15% of the population there are atopic, and some people speculate that in Germany about 10%-15% of all adults suffer from one of the many different allergic conditions. We in our clinic also have the impression that the incidence of atopic reactions has increased in recent years. The figure of 15% would mean something like 200 000 people in Munich alone! We all know that a wide variety of environmental factors can induce allergic reactions in the skin, the respiratory system, or internal organs. The most important anergens in our environment are pollen, molds, animal dander, housedust mite, food or food additives, various insects, industrial compounds and drugs. The direct costs of hospital and community medical care, other services, and drugs to help patients with asthma, hay fever, and skin allergies have in creased considerably in the last 10 years. The figures should make it clear to everybody that we are dealing with a health and environmental problem of great practical importance.

Handbook of Polyurethanes serves as the first source of information of useful polymers. This new book thoroughly covers the entire spectrum of polyurethanes - from current technology to buyer's information. Discussions include: block and heteroblock systems rubber plasticity structure-property relations microphase separation catalysis of isocyanate reactions synthesis of polyurethanes for thermoplastics, thermosets, and curable compositions by either heat or U.V. energy biomedical applications of urethane elastomers castables, sealants, and caulking compounds flexible and semi-flexible foams health and safety This handbook compiles data from many sources, exhaustively illustrating the complex principles involved in polyurethane chemistry and technology. Handbook of Polyurethanes represents invaluable information for corporations, universities, or independent inventors.

The growing interest in health risks associated with toxigenic fungi and related mycotoxins has led to the development of a number of research projects during the past decade in several European countries and a great deal of information has been produced on the natural occurrence of mycotoxins in plants, foods and feeds. The differences in environmental conditions (temperature, light, rainfall etc. ) and in exposed cultivated plants (type of cereals, cultivars etc. ) in the distinct European countries have significantly influenced the distribution of specific toxigenic fungi and related mycotoxicological problems. In addition, biogeographically structured lineages within some important toxigenic fungi have been recently discovered, of reproductive isolation. Transglobal showing a long evolutionary history transposition of plant products seems to have significantly contributed to the spreading of toxigenic species and lineages worldwide. Therefore, the migration of agriculturally important toxigenic fungi generated by trade exchanges may represent a major source of inoculum for new plant diseases in Europe and for a wider genetic diversity of local populations. It was our goal to provide the reader with an update of researches and surveys on the natural occurrence of toxigenic fungi and mycotoxins performed at a European level during the last 5-10 years. The editors are extremely grateful to the EU-COST-835 "Agriculturally important toxigenic fungi" for the financial support that allowed a number of European scientists to meet several times over the past five years to collaborate and exchange information about research advances on toxigenic fungi and mycotoxins.
