New York Times and USA Today bestselling authors and award-winning archaeologists W. Michael Gear and Kathleen O'Neal Gear bring the stories of these first North Americans to life in this and other volumes in the magnificent North America's Forgotten Past series. Set five thousand years ago and ranging through what is now Montana, Wyoming, northern Colorado, and Utah, People of the Earth follows the migration of the Uto-Aztecan people south out of Canada. It is the unforgettable tale of a woman torn between two peoples and two dreams, of the two men who love her and the third who must have her, and of the vision given to the peoples long ago by the spirit of the wolf. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

This comprehensive book tells a narrative story of human prehistory to a reader with little or no archaeological experience or background. Designed to show how today's diverse humanity developed biologically and culturally over millions of years and against a background of constant climatic change, it treats all areas of the world evenly, and covers all periods of prehistory from human origins to the appearance of literate civilizations. Recent discoveries, new archaeological methodologies, and the latest theories of human biological and cultural evolution add to the excitement of this adventure in archaeology. The tale begins with human origins and ends with the Spanish Conquest of Mexico and Peru in the fifteenth century A.D. It spans the origins of food production and the development of civilization—not only in classic areas of archaeological research like Europe, southwestern Asia, and Mesoamerica—but in such lesser known regions as southeast Asia, Africa, and the Pacific. For individuals who recognize the importance of knowing the past to understand the future—and our world today.

In the dawn of agriculture, a young woman is caught between the love of two men who must have her and the vision given to her people long ago by the spirit of the wolf.

All the Gears' previous titles in the First North American series have been national bestsellers. Now, People of the River is finally available in mass-market. This gripping saga tells of the Mound Builders of the Mississippi Valley. In a time of many troubles, a warchief and his people have lost all hope. But hope is revived with a young girl learning to Dream of Power.

April 2009 is the one-hundredth anniversary of perhaps the greatest controversy in the history of exploration. Did U.S. Naval Commander Robert Peary and his team dogsled to the North Pole in thirty-seven days in 1909? Or, as has been challenged, was this speed impossible, and was he a cheat? In 2005, polar explorer Tom Avery and his team set out to recreate this 100-year-old journey, using the same equipment as Peary, to prove that Peary had indeed done what he had claimed and discovered the North Pole. Navigating treacherous pressure ridges, deadly channels of open water, bitterly cold temperatures, and traveling in a similar style to Peary's with dog teams and replica wooden sledges bound together with cord, Avery tells the story of how his team covered 413 nautical miles to the North Pole in thirty-six days and twenty-two hours—some four hours faster than Peary. Weaving fascinating polar exploration history with thrilling extreme adventure, this is Avery's story of how he and his team nearly gave their lives proving Peary told the truth.

Discusses the issues of geomagnetism, including why the Earth's magnetic north differs from its geographic north, how animals use geomagnetism for migration purposes, and the source of the magnetic field.

From Matthew Fox, the popular and controversial author of The Coming of the Cosmic Christ, a prophetic manifesto for the preservation of the planet. For those new to the works of Matthew Fox, and for those eager to learn his thoughts after his Vatican-ordered public silence, comes this introduction to creation spirituality--Fox's framework for a far-reaching spirituality of the Americas. Passionate and provocative, Fox uncovers the ancient tradition of a creation-centered spirituality that melds Christian mysticism with the contemporary struggle for social justice, feminism, and environmentalism. Basic to Fox's notion of creation spirituality is the gift of awe--a mystical response to creation and the first step toward transformation. Awe prompts indignation at the exploitation and destruction of the earth's people and resources. Awe leads to action. Showing how we can learn from each other, Fox's spirituality wedes the healing and liberation found in both North and South America. Creation Spirituality challenges readers of every religious and political persuasion to unite in a new vision through which we learn to

honor the earth and the people who inhabit it as the gift of a good and just creator.

Explores the basics of man's interaction with Earth

The North Pole has long held surprising importance for many of the world's cultures. Interweaving science and history, this book offers the first unified vision of how the North Pole has shaped everything from literature to the goals of political leaders—from Alexander the Great to neo-Hindu nationalists. Tracing the intersecting notions of poles, polarity, and the sacred from our most ancient civilizations to the present day, Michael Bravo explores how the idea of a North Pole has given rise to utopias, satires, fantasies, paradoxes, and nationalist ideologies across every era, from the Renaissance to the Third Reich. The Victorian conceit of the polar regions as a vast empty wilderness—a bastion of adventurous white males battling against the elements—is far from the only polar vision. Bravo paints a variety of alternative pictures: of a habitable Arctic crisscrossed by densely connected networks of Inuit trade and travel routes, a world rich in indigenous cultural meanings; of a sacred paradise or lost Eden among both Western and Eastern cultures, a vision that curiously (and conveniently) dovetailed with the imperial aspirations of Europe and the United States; and as the setting for tales not only of conquest and redemption, but also of failure and catastrophe. And as we face warming temperatures, melting ice, and rising seas, Bravo argues, only an understanding of the North Pole's deeper history, of our conception of it as both a sacred and living place, can help humanity face its twenty-first-century predicament.

NEW YORK TIMES BESTSELLER — The “exquisitely researched and deeply engrossing” (The New York Times) true survival story of an early polar expedition that went terribly awry—with the ship frozen in ice and the crew trapped inside for the entire sunless, Antarctic winter —“The energy of the narrative never flags. . . . Sancton has produced a thriller.”—The Wall Street Journal In August 1897, the young Belgian commandant Adrien de Gerlache set sail for a three-year expedition aboard the good ship Belgica with dreams of glory. His destination was the uncharted end of the earth: the icy continent of Antarctica. But de Gerlache's plans to be first to the magnetic South Pole would swiftly go awry. After a series of costly setbacks, the commandant faced two bad options: turn back in defeat and spare his men the devastating Antarctic winter, or recklessly chase fame by sailing deeper into the freezing waters. De Gerlache sailed on, and soon the Belgica was stuck fast in the icy hold of the Bellingshausen Sea. When the sun set on the magnificent polar landscape one last time, the ship's occupants were condemned to months of endless night. In the darkness, plagued by a mysterious illness and besieged by monotony, they descended into madness. In *Madhouse at the End of the Earth*, Julian Sancton unfolds an epic story of adventure and horror for the ages. As the Belgica's men teetered on the brink, de Gerlache relied increasingly on two young officers whose friendship had blossomed in captivity: the expedition's lone American, Dr. Frederick Cook—half genius, half con man—whose later infamy would overshadow his brilliance on the Belgica; and the ship's first mate, soon-to-be legendary Roald Amundsen, even in his youth the storybook picture of a sailor. Together, they would plan a last-ditch, nearly certain-to-fail escape from the ice—one that would either etch their names in history or doom them to a terrible fate at the ocean's bottom. Drawing on the diaries and journals of the Belgica's crew and with exclusive access to the ship's logbook, Sancton brings novelistic flair to a story of human extremes, one so remarkable that even today NASA studies it for research on isolation for future missions to Mars. Equal parts maritime thriller and gothic horror, *Madhouse at the End of the Earth* is an unforgettable journey into the deep.
