Lee writes, ...under Pep Guardiola the clear instruction in the attacking phase is to keep at least one wide player out on the ball far-side of the field, right against the touchline. Without that instruction, the switch of play from the overloading section of the field into the isolated side would be far less effective.

Mastering the Premier League offers an in-depth look at the tactical concepts underlying a sports superpower--revealing who does what, how and why. Discover the secrets of the game model developed by Pep Guardiola that sets Manchester City apart from the rest. When Guardiola joined Manchester City in 2016 there were doubts that he could replicate his successful model in the English game. But after a single season of acclimatization we saw those doubts shattered as City won the Premier League in 2017/18 with a record 100 points. Beyond the trophies and the records, however, lies a yet more intriguing story--of how Guardiola adapted and perfected the tactical principles that had made him so successful at Barcelona and Bayern Munich, who played the key roles on the field, enabling Manchester City's successes of 2017-19, and why the other Premier League sides were unable to stop the City juggernaut sweeping aside all in its path.

Following a shock sabbatical from the game, he replaced Jupp Heynckes at the helm of Bayern Munich at the start of the 2013-14 season, twice winning the Double in his three years in charge. He then announced that he would be joining Manchester City for the 2016-17 season, thereby beginning what could prove to be his greatest challenge yet: turning them into a team that consistently wins in the most difficult of leagues and a regular challenger in the Champions League . . . and doing it the Guardiola way. Guillem Balagué has followed Pep's career from the outset and has had direct access to the man and his inner circle. This then is the definitive portrait of Pep Guardiola and his relentless pursuit of footballing perfection.

The positional grid is like a cognitive road map for players when in possession. Depending on where the ball is located, players are responsible to fill a specific a location in the positional grid. The end result is that a team shape or structure will develop in possession, resulting in a positional soccer style of play. However, the game of soccer has unlimited ever changing situations and variables, so there will always be freedom within the provided positional structure to make adaptions. The positional soccer grid divides the training pitch into 20 sections, basically five vertical rows and four cross-field sections. The widest channels are referred to as the low option areas, because there are limited passing opportunities that can made from out wide. The widest areas are utilized often to draw the defense out, moving them from side to side to open up spaced in between the defenders or on the far side. The next space that borders the wide channel is called a "hail space". The hail space is a dangerous area because penetrating balls and shots on goal can be taken from this position. Guardiola often liked his most dangerous players like Robben or Messi to receive the ball in the half spaces. How many goals have we seen those two players create by cutting inside and shooting to the far post! The next space is the large space on top of the 18-yard box, this space is considered the most dangerous area on the soccer field. This large box is so dangerous because more goals are created from this area than anywhere else. However, quick 1-touch play is critical in this area to be effective, with the largest concentration of defenders located in this space. Of course players like Messi are invaluable in areas like this, as they can make the impossible happen, changing the game.The positional grid offers a structure and provides cues for players, letting them know to adjust their position depending in which zone the ball is in, they must know when to fill an empty zone when it has been vacated, or to move into a zone to create superiority of numbers. A general rule of thumb is that no more than three players will be in a horizontal line, and not more than two in a vertical line, this helps give the player on the ball two-three passing options. The entire game can be taught using the grid, from build-up play to the attacking third. When using the grid to teach positional soccer there are many ways to utilize it. One way is to set-up trainings that require players to operate inside the positional grid, adhering to specific conditions, but still allowing a degree tactical freedom while encouraging problem solving. An example of this would be requiring five shorter passes on one side of the field before a long pass can be made, switching the field to the far wide player. The next type of training can use the grid as more of specific road map that must be strictly adhered to. An example of this would be working on playing the ball out of the back. Each player will be assigned a specific part of the grid to be in, as a standard way of operating out of the back is established. The other beneficial aspect of using the positional grid is that it organizes space on the field in a realistic way for players. When players train tactics in specific game realistic spaces, their soccer awareness, tactical sense and soccer IQ benefit. Training in the positional grid helps players better judge distance, space and time in relationship to carrying out the desired tactics. I recommend training with the grid and then removing the grid at the end, so that spatial relationship is further reinforced.
