"A comprehensive and practical, step-by-step guide to pricing analysis and strategy development. This book shows readers how to manage markets strategically-rather than simply calculate pricing based on product and profit-in order to improve their competitiveness and the profitability of their offers. This fifth edition contains a new chapter on price implementation and several updated examples on pricing challenges in today's markets."--Amazon.com.

With crisp and insightful contributions from 47 of the world's leading experts in various facets of retailing, *Retailing in the 21st Century* offers in one book a compendium of state-of-the-art, cutting-edge knowledge to guide successful retailing in the new millennium. In our competitive world, retailing is an exciting, complex and critical sector of business in most developed as well as emerging economies. Today, the retailing industry is being buffeted by a number of forces simultaneously, for example the growth of online retailing and the advent of "radio frequency identification" (RFID) technology. Making sense of it all is not easy but of vital importance to retailing practitioners, analysts and policymakers.

This book should become a standard reference in the field. . . It combines rigorous modeling with sophisticated econometrics and includes telling examples to illustrate general principles. Dennis C. Mueller, University of Vienna, Austria This book provides a uniform and coherent approach to the analysis of distribution systems in general and retail systems in particular. It develops the fundamentals of retail demand and supply, and demonstrates how the provision of distribution services is a principal determinant of economic outcomes in retail exchanges for both retailers and their customers, as well as for other agents such as suppliers and franchisors. The author integrates the existing literature with new applications to provide novel insights into the multi-product nature of retailing, the service aspects of packaging, and the evolution of retail formats such as supermarkets, non-store retailers (including the Internet) and shopping centers. He illustrates how the complementarity that underlies retail activities leads to lower average prices for customers. This integrative process also brings out the role of distribution services as mechanisms to exercise economic power. This is evident not only in channels of distribution but in the evolution of Wal-Mart and the development of franchise contracts. The author also identifies the crucial differences between the retailing of goods and the retailing of services. This impressive volume skilfully integrates conceptual, theoretical and empirical research to analyse critical issues in the economics of retailing and distribution. It will be required reading for academics and professional economists interested in industrial organization, marketing, applied microeconomics and business.

The growth in private labels has huge implications for managers on both sides.

In some parts of the world, especially in developing markets, category management today remains a stretch goal – a new idea full of untapped potential. In other areas, the original eight-step process that emerged in the late 1980's forms the foundation of many companies' approach to category management. In still others, particularly in developed countries like the U.S., the U.K., and others, refinements are being made – most of them designed to place consumer understanding front and center. New ideas are emerging – from "trip management" to "aisle management" to "customer management." Whether a new

descriptor emerges to replace "category management" is yet to be seen. Even if that does happen, what won't change is the overall objective – to help retailers and their manufacturer partners succeed by offering the right selection of products that are marketed and merchandised based on a complete understanding of the consumers they are committed to serving. This book, which explores both the state of and the state-of-the-art in category management, is for everyone with a vested interest in category management. It can serve such a broad audience because category management is about bringing a structured process to how executives think and make decisions about their businesses, no matter what information and information technology they have access to.

The Book That Gives the Inside Story on Hundreds of Secrets of American Life --Big Secrets. Are there really secret backward messages in rock music, or is somebody nuts? We tested suspect tunes at a recording studio to find out. What goes on at Freemason initiations? Here's the whole story, including -- yes! -- the electric carpet. Colonel Sanders boasted that Kentucky Fried Chicken's eleven secret herbs and spices "stand on everybody's shelf." We got a sample of the seasoning mix and sent it to a food chemist for analysis. Feverish rumor has it that Walt Disney's body was frozen and now lies in a secret cryonic vault somewhere beneath the Pirates of the Caribbean exhibit at Disneyland. Read the certified stranger-than-fiction truth. Don't bother trying to figure out how Doug Henning, David Copperfield, and Harry Blackstone, Jr., perform their illusions. Big Secrets has complete explanations and diagrams, nothing left to the imagination.

In *Fast-Track Your Business*, author Laura Patterson offers step-by-step guidance for acquiring customer insights, creating customer-centric outcomes, and developing strategies and measurable executable plans.

Since 2001, the United Nations Department of Economic and Social Affairs (DESA), Division for Public Administration and Development Management (DPADM) has published the United Nations E-Government Survey (the Survey). Now in its ninth edition, the Survey provides an analysis of emerging public administration trends and issues and of how e-government can support the realization of the internationally agreed development agenda and goals. The Survey offers insights about common challenges, broad trends and different strategies in e-government development among regions and across countries. By tracking the progress of countries globally over time, the Survey seeks to better understand the challenges and opportunities that the Member States face in developing their e-government programmes.
