This best-selling undergraduate textbook provides an introduction to key experimental techniques from across the biosciences. It uniquely integrates the theories and practices that drive the fields of biology and medicine, comprehensively covering both the methods students will encounter in lab classes and those that underpin recent advances and discoveries. Its problem-solving approach continues with worked examples that set a challenge and then show students how the challenge is met. New to this edition are case studies, for example, that illustrate the relevance of the principles and techniques to the diagnosis and treatment of individual patients. Coverage is expanded to include a section on stem cells, chapters on immunochemical techniques and spectroscopy techniques, and additional chapters on drug discovery and development, and clinical biochemistry. Experimental design and the statistical analysis of data are emphasised throughout to ensure students are equipped to successfully plan their own experiments and examine the results obtained.

All the characteristics and driving force of The Cleveland Clinic are to be found in this book on pelvic floor function. The Cleveland Clinic is a group practice founded in 1921 on the principles of cooperation, collaboration and collegiality. Its founders believed that many physicians working together will discover better solutions to medical problems than physicians working in isolation. They believed that the combination of disciplines, with their inherent differences in philosophy and skills, will produce a better outcome than might have evolved singularly. The power of the collaborative approach is on full display in this book. The pelvic floor unites three separate organ systems. Before this time, each has been approached individually. Urologists, gynecologists, and colorectal surgeons are each trained in their own disciplines, and the pelvic floor is subsumed in these larger fields of study. When they combine their focus on the pelvic floor, they bring their unique perspectives and different approaches to a common goal: the relief of pelvic floor syndromes such as incontinence and pelvic organ prolapse.

Deals with the period beginning at the close of the Neolithic era, from around the eighth millennium before our era. This period of some 9,000 years of history has been sub-divided into four major geographical zones, following the pattern of African historical research. Chapters 1 to 12 cover the corridor of the Nile, Egypt and Nubia. Chapters 13 to 16 relate to the Ethiopian highlands. Chapters 17 to 20 describe the part of Africa later called the Maghrib and its Saharan hinterland. Chapters 21 to 29, the rest of Africa as well as some of the islands of the Indian Ocean.--Publisher's description
