This book helps readers develop a comprehensive understanding of diagnostics for strategic decision-making, with a focus on a method called rapid due diligence. This method presents a compelling solution to the need for effective diagnostics, drawing on academic rigor, critical thinking, systems dynamics, and advanced practicum to enable sound strategic decision-making. Guiding the reader through the six stages of the process from discovery, through analysis, synthesis, and interpretation, Thompson engages all typical postgraduate disciplines in producing insights for practical application. Drawing on similarities with applied social science research, the rapid due diligence method is supported with scores of techniques, tools, instructions, guidelines, practical advice, and examples. Detailed cases and abbreviated examples of a variety of real strategic situations are provided from organizations operating in North America, Europe, Asia, India, and Australia. Ideal for graduate students, organizational leaders, and decision makers, this book is designed to invite deeper understanding and practical application of a strategic diagnostic process that discovers insights for achieving positive results.

PMBOK® Guide is the go-to resource for project management practitioners. The project management profession has significantly evolved due to emerging technology, new approaches and rapid market changes. Reflecting this evolution, The Standard for Project Management enumerates 12 principles of project management and the PMBOK® Guide® Seventh Edition is structured around eight project performance domains.This edition is designed to address practitioners' current and future needs and to help them be more proactive, innovative and nimble in enabling desired project outcomes.This edition of the PMBOK® Guide® Reflects the full range of development approaches (predictive, adaptive, hybrid, etc.);Provides an entire section devoted to tailoring the development approach and processes;Includes an expanded list of models, methods, and artifacts;Focuses on not just delivering project outputs but also enabling outcomes; and Integrates with PMIstandards® for information and standards application content based on project type, development approach, and industry sector.

The old saying goes, "To the man with a hammer, everything looks like a nail." But anyone who has done any kind of project knows a hammer often isn't enough. The more tools you have at your disposal, the more likely you'll use the right tool for the job - and get it done right. The same is true when it comes to your thinking. The quality of your outcomes depends on the mental models in your head. And most people are going through life with little more than a hammer. Until now. The Great Mental Models: General Thinking Concepts is the first book in The Great Mental Models series designed to upgrade your thinking with the best, most useful and powerful tools so you always have the right one on hand. This volume details nine of the most versatile, all-purpose mental models you can use right away to improve your decision making, productivity, and how clearly you see the world. You will discover what forces govern the universe and how to focus your efforts so you can harness them to your advantage, rather than fight with them or worse yet- ignore them. Upgrade your mental toolbox and get the first volume today. AUTHOR BIOGRAPHY Farnam Street (FS) is one of the world's fastest growing websites, dedicated to helping our readers master the best of what other people have already figured out. We curate, examine and explore the timeless ideas and mental models that history's brightest minds have used to live lives of purpose. Our readers include students, teachers, CEOs, coaches, athletes, artists, leaders, followers, politicians and more. They're not defined by gender, age, income, or politics but rather by a shared passion for avoiding problems, making better decisions, and lifelong learning. AUTHOR HOME Ottawa, Ontario, Canada

The water supply and sanitation (WSS) sector in Moldova is not financially sustainable: tariffs do not typically cover operational costs and capital investments are heavily funded by external development partners.

When non-fed. public entities propose public works projects that could degrade or damage federally regulated waters and wetlands they must obtain a permit from the Army Corps of Engineers (ACE) before proceeding. To obtain the ACE's approval, the entity must submit a permit application. In 2000, the Congress included a provision in an Act to expedite permit processing for these entities. Sect. 214 of the act authorizes the ACE to accept and expend funds from these entities to expedite the evaluation of permit applications. Mittal believes that the ACE has taken appropriate steps to ensure that the documentation that district officials include in project files will justify and support their permitting decisions. This is a print on demand report.

Multi-Actor Multi-Criteria Analysis (MAMCA) developed by Professor Cathy Macharis enables decision-makers within the sectors of transport, mobility and logistics to account for conflicting stakeholder interests. This book draws on 15 years of research and application during which MAMCA has been deployed to support sustainable decisions within the transport and mobility sectors.

This book examines multiple criteria decision making (MCDM) and presents the Sequential Interactive Modelling for Urban Systems (SIMUS) as a method to be used for strategic decision making. It emphasizes the necessity to take into account aspects related to real world scenarios and incorporating possible real life aspects for modelling. The book also highlights the use of sensitivity analysis and presents a method for using criteria marginal values instead of weights, which permits the drawing of curves that depicts the variations of the objective function due to variations of these marginal values. In this way it also gives quantitative values of the objective function allowing stakeholders to perform a comprehensive risk analysis for a solution when it is affected by exogenous variables. Strategic Approach in Multi-Criteria Decision Making: A Practical Guide for Complex Scenarios is divided into three parts. Part 1 is devoted to exploring the history and development of the discipline and the way it is currently used. It highlights drawbacks and problems that scholars have identified in different MCDM methods and techniques. Part 2 addresses best practices to assure quality MCDM process. Part 3 introduces the concept of Linear Programming and the proposed SIMUS method as techniques to deal with MCDM. It also includes case studies in order to help document and illustrate difficult concepts, especially related to demands from a scenario and also in their modelling. The decision making process can be a complex task, especially with multi-criteria problems. With large amounts of information, it can be an extremely difficult to make a rational decision, due to the number of intervening variables, their interrelationships, potential solutions that might exist, diverse objectives envisioned for a project, etc. The SIMUS method has been designed to offer a strategy to help organize, classify, and evaluate this information effectively.

Systems engineering has been applied to some of the most important projects of our time, including those that have helped humanity explore the world and the universe, expand our technical abilities, and enhance the quality of human life. Without formal training in systems engineering, the discipline is often difficult to understand and apply, and its use within projects is often confusing. Systems Engineering for Projects: Achieving Positive Outcomes in a Complex World provides an approach that utilizes a combination of the most effective processes from both project management and systems engineering disciplines in a simplified and straightforward manner. The processes described in the book are lightweight, flexible, and tailorable. They provide the shortest path to success in projects across the entire project life cycle, from research to operations, and from simple to the most complex. The book also addresses how this methodology can be used in a continually adapting and changing world, as projects span disciplines and become even more interconnected across all areas of human existence. Each chapter includes diagrams, templates, summary lists, a case study, and a thought-provoking question and answer section that assists readers in immediate application of the material to their own projects. The book is a project manager's resource for understanding how to directly apply essential processes to projects in a way that increases the probability of achieving success. It is a comprehensive, go-to manual on the application of systems engineering processes to projects of all types and complexity.

Finance for Strategic Decision Making demystifies and clarifies for non-financial executives the basics of financial analysis. It shows how they can make important financial decisions that can critically enhance their institution's ability to respond to competitive challenges, undertake new projects, overcome financial setbacks, and most importantly, create shareholder value. Written by M. P. Narayanan and Vikram K. Nanda, two of the country's leading authorities on financial strategy, this book offers a practical guide for using financial analysis to enhance strategic decision making. The book includes a coherent framework that outlines practical and intellectually sound guidance for executives who must make strategic decisions. Finance for Strategic Decision Making Explains the role of finance in corporate strategy Offers guidance on resource allocation decisions Explores how to determine the right balance of debt and equity capital to maximize firm value Demonstrates how to use payout policy as a strategic tool Clarifies if a merger, acquisition, or divestiture is in the best interest of an organization Shows how to manage risk Reveals how to measure value created and the effectiveness of upper level management

This Technical Assistance Report on The Gambia highlights that the government has highlighted infrastructure development as a key element of National Development Plan, 2018/21. The report discusses that the need for increased public investment in the Gambia should be balanced against potential fiscal risks related to future Public-Private Partnerships and State-Owned Enterprise investments. Analysis of public investment patterns shows a fragmented picture, in which external financing dominates. Measures of the efficiency of infrastructure investments show mixed results and considerable room for improvement. The analysis explains that the Gambia's performance across different Public Investment Management Assessment (PIMA) indicators is mixed and does not compare favorably with regional counterparts. Nevertheless, there are many indicators where the PIMA rating is poor. Prevailing weaknesses include the presence of many information gaps and non-transparent disclosure policies. The mission's main recommendations focus on five priority areas and are designed to complement reforms that are already being undertaken.
