The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.

The unprovoked war with the Sogas has reached a climax. Over a hundred Sogas ships appear to be headed for Earth and Space Force is in no condition to stop them. As if that wasn't bad enough, the nightmarish Insectoids will be arriving in Earth orbit within months to finish off the survivors of the impending Sogas attack. Admiral Victor Shiloh, Commander Amanda Kelly and Valkyrie will have to make some heartbreaking decisions if Humanity is to have any chance at all of avoiding extinction in this final chapter of the Synchronicity War saga.

Inferring is an essential reading comprehension skill for all subject areas. Help students understand inferring using Spotlight on Reading: Inferring for grades 1–2. This 48-page book includes a variety of high-interest lessons and activities that make learning fun! The exercises increase in difficulty as the book progresses, so students practice more-advanced skills as they work. With a variety of formats, teachers can provide direct instruction, reinforcement, and independent practice throughout the year. This book is perfect for practice at home and school and includes an answer key. Aligns with Common Core State Standards and Canadian provincial standards.

Created around the world and available only on the web, Internet "television" series are independently produced, mostly low budget shows that often feature talented but unknown performers. Typically financed through crowd-funding, they are filmed with borrowed equipment and volunteer casts and crews, and viewers find them through word of mouth or by chance. The fourth in a series covering Internet TV, this book takes a comprehensive look at 1,121 comedy series produced exclusively for online audiences. Alphabetical entries provide websites, dates, casts, credits, episode lists and storylines.

Shows how to convert Volkswagens into dune buggies, offers tips on off-road racing, and includes advice on safety and first aid
