I have the ResMed AirSense A10 AutoSet. I started out in Auto mode, and after I found out what pressure works best for me, I switched it to fixed pressure mode. My wife has a S9 and still runs it in Auto mode. I think for people who have significant central apnea a fixed pressure may work better than an auto pressure machine.

I've tried a variety of other snoring remedies - breathe right strips, wedge pillow to elevate my head, in-nose devices, mouth taping, chin strap. I even had radiofrequency turbinate reduction as I thought might be a contributing cause - I can breathe much better through my nose, but no change in snoring.

The S9 pressure was set at 11 and I've never had any reason to change it. Every morning I check the machine for the night's AHI and it's always been good: usually between 1.3 and 3.5 or so. Once or twice a month it'll hit 4+. Maybe 2 or 3 times a year it will go above 5. I think I hit 6 one time. But the S9 has gotten old.

Cardiopulmonary exercise testing is an important diagnostic test in pulmonary medicine and cardiology. Capable of providing significantly more information about an individual's exercise capacity than standard exercise treadmill or 6-minute walk tests, the test is used for a variety of purposes including evaluating patients with unexplained exercise limitation or dyspnea on exertion, monitoring disease progression or response to treatment, determining fitness to undergo various surgical procedures and monitoring the effects of training in highly fit athletes. Introduction to Cardiopulmonary Exercise Testing is a unique new text that is ideal for trainees. It is presented in a clear, concise and easy-to-follow manner and is capable of being read in a much shorter time than the available texts on this topic. Chapters describe the basic physiologic responses observed during sustained exercise and explain how to perform and interpret these studies. The utility of the resource is further enhanced by several sections of actual patient cases, which provide opportunities to begin developing test interpretation skills. Given the widespread use of cardiopulmonary exercise testing in clinical practice, trainees in pulmonary and critical care medicine, cardiology, sports medicine, exercise physiology, and occasionally internal medicine, will find Introduction to Cardiopulmonary Exercise Testing to be an essential and one of a kind reference.

The first book to address emphysema and chronic obstructive pulmonary disease (COPD) from a nutritional and alternative medicine approach - Explains the benefits of detoxification, dietary changes, and food combining - Details 45 suggested herbs and 26 nutritional supplements as well as information on how to stop smoking Approximately 35 million people in the United States have been diagnosed with some form of chronic obstructive pulmonary disease (COPD)--emphysema constituting 18 million of that group. Worldwide, as many as 293 million people suffer with these conditions. COPD is the fourth leading cause of death in America, claiming nearly 120,000 lives annually. Yet conventional approaches to treatment, with their regimens of drugs and unceasing physical therapy, provide neither cure nor significant relief. In Natural Therapies for Emphysema and COPD, Robert Green shows that alternative holistic therapies ranging from herbs to homeopathy offer great promise in relieving COPD's debilitating symptoms. Starting with the basics of the physiology of respiration, Green presents a comprehensive program that includes detoxification, dietary changes, nutritional supplements, and herbal medicine; breathing techniques and exercise options such as aerobics, yoga, qigong, and tai chi; and alternative therapies such as homeopathy, acupuncture, and massage--noting how and why each therapy works. He also details how to stop smoking, includes resources for alternative health practitioners, and provides sources for the alternative products recommended.

Having trouble hearing? Ears ringing? Room spinning? Dizzy? Find out quickly if your medications may be the culprits! "Ototoxic Drugs Exposed" reveals the shocking truth about the specific ear-damaging effects of more than 1,000 drugs, herbals and chemicals. Just as importantly, it reveals the factors that can put your ears at higher risk, and explains how you can help reduce this risk in order to help protect

your ears from the sneak attacks of ear-damaging agents.

Growing up in a tiny shack in the Dominican Republic, Felipe Alou never dreamed he would be the first man born and raised in his country to play and manage in Major League Baseball--and also the first to play in the World Series. In this extraordinary autobiography, Alou tells of his real dream to become a doctor, and an improbable turn of events that led to the pro contract. Battling racism in the United States and political turmoil in his home country, Alou persevered, paving the way for his brothers and scores of other Dominicans, including his son Moisés. Alou played seventeen years in the Major Leagues, accumulating more than two thousand hits and two hundred home runs, and then managed for another fourteen years--four with the San Francisco Giants and ten with the Montreal Expos, where he became the winningest manager in franchise history. Alou's pioneering journey is embedded in the history of baseball, the Dominican Republic, and a remarkable family. Purchase the audio edition.

This book is a compilation of topics addressed by the ASA Biopharmaceutical Section work groups, including the etiology and evolution of the work groups, the work group guidelines and structure, and the statistical issues associated with clinical trials in clinical drug development programs.

Microbes, especially molds and bacteria, growing in water-damaged buildings make people sick. The book follows *Mold Warriors* (published in 2005) as the definitive source of information on "mold" illness, its basis in inflammation, its physiology and its links to politics, lawsuits and science. It has true stories, regarding this increasingly common problem in the US and around the world. If you already know that you could be sickened by mold-damaged buildings, this book will guide you through diagnosis and treatment, through remediation and return to health.

Maybe you're stressed out and tired, and have put on a little weight. Or you have persistent pain you and your doctor can't explain. Man or woman, you may be fighting fluctuating hormone levels. Or maybe you snore like a freight train. Anything that narrows the throat and interrupts sleep, particularly breathing problems brought on by sleep position, illness, life changes, or your anatomy, may be key to understanding a host of common health issues. In this groundbreaking book, Dr. Steven Park outlines a simple, rational explanation for what's making you sick, and provides guidance for treatment options that address specific health problems.
