A review for the book from another world renown author. Rita Mulcahy, PMP, is an author, consultant and member of the Project Management Institute's Risk Management Special Interest Group. Either through frustration at the lack of good, practical risk management reference materials, or because she is bubbling over with ideas on the subject, Rita has written a comprehensive book: "Risk Management - Tricks of the Trade? for Project Managers." The book is structured according to the Institute's view of project risk management and is therefore supportive of the Project Management Professional certification exam. It even has a 50-question Final Exam in the certification examination mode. However, Rita's book is much more than that. It provides a very clear and down-to-

earth explanation of what project risk management is all about. I was particularly pleased to see an emphasis on things going right (opportunities enhancement) as well as going wrong (risks). The book is lavishly endowed with bulleted lists of explanation for rapid absorption of content by busy project people. It also has very practical quick-read "Tricks of the Trade" sidebars (e.g. How to interview an expert), check lists, charts, forms and how to use them with worked examples. It is even topped off with quiz games to make it a fun encounter. For University instructors and training workshop leaders there are plenty of "Questions for discussion". In an appendix there is a long list of potential risks, their cause and effect in various industries. No doubt that list has been culled from the brainstorming efforts of

many of Rita's workshop attendees over the years. Still, I could not help but empathize with chagrin the construction risk-cause entry "Local politicos, unruly elements, etc." Well said! Armed with this book, there should be no excuse any longer for anyone to declare that they don't know how to apply risk management to their projects, however large or small their projects may be. Nor should there be any question of how to get started or even why they should get started and when. The real benefit of the book is that it demonstrates very clearly that project risk management does not have to be difficult, nor academically challenging. I have always held that project risk management is really very simple. When you are gearing up for your next project, the best advice I can give is "Don't leave home without it!" R. Max

Risk management is the identification, assessment, and prioritization of risks (defined in ISO 31000 as the effect of uncertainty on objectives) followed by coordinated and economical application of resources to minimize, monitor, and control the probability and/or impact of unfortunate events or to maximize the realization of opportunities. Project failures (at any phase in design, development, production, or sustainment life-cycles), legal liabilities, credit risk, accidents, natural causes and disasters as well as deliberate attack from an adversary, or events of uncertain or unpredictable root-cause. Several risk management standards have been developed including the Project Management Institute, the National Institute of Standards and Technology, actuarial societies, and ISO standards. Methods, definitions and goals vary widely according to whether the risk management method is in the context of project management, security, engineering, industrial processes, financial portfolios, actuarial assessments, or public health and safety. The strategies to manage threats (uncertainties with negative consequences) typically include

transferring the threat to another party, avoiding the threat, reducing the negative effect or probability of the threat, or even accepting some or all of the potential or actual consequences of a particular threat, and the opposites for opportunities (uncertain future states with benefits). Certain aspects of many of the risk management standards have come under criticism for having no measurable improvement on risk, whether the confidence in estimates and decisions seem to increase. For example, it has been shown that one in six IT projects experience cost overruns of 200% on average, and schedule overruns of 70%.
