Corporate workgroups, distributed enterprises, and small to medium-sized companies are increasingly seeking to network and consolidate storage to improve availability, share information, reduce costs, and protect and secure information. These organizations require enterprise-class solutions capable of addressing immediate storage needs cost-effectively, while providing an upgrade path for future requirements. IBM® System Storage® N series storage systems and their software capabilities are designed to meet these requirements. IBM System Storage N series storage systems offer an excellent solution for a broad range of deployment scenarios. IBM System Storage N series storage systems function as a multiprotocol storage device that is designed to allow you to simultaneously serve both file and block-level data across a single network. These activities are demanding procedures that, for some solutions, require multiple, separately managed systems. The flexibility of IBM System Storage N series storage systems, however, allows them to address the storage needs of a wide range of organizations, including distributed enterprises and data centers for midrange enterprises. IBM System Storage N series storage systems also support sites with computer and data-intensive enterprise applications, such as database, data warehousing, workgroup collaboration, and messaging. This IBM Redbooks® publication explains the software features of the IBM System Storage N series storage systems. This book also covers topics such as installation, setup, and administration of those software features from the IBM System Storage N series storage systems and clients and provides example scenarios.

Grids are a crucial enabling technology for scientific and industrial development. Peer-to-peer computing, grid, distributed storage technologies, emerging web service technologies, and other types of networked distributed computing have provided new paradigms exploiting distributed resources. Grids are revolutionizing computing as profoundly as e-mail and the Web. From Grids to Service and Pervasive Computing, the 10th edited volume of the CoreGRID series, is based on the 2008 CoreGRID Symposium, held August 25-26 in the Canary Islands, Spain. The CoreGRID Symposium is organized jointly with the Euro-Par 2008 conference. The aim of this symposium is to strengthen and advance scientific and technological excellence in the area of grid and peer-to-peer computing. This volume is designed for a professional audience composed of researchers and practitioners within the grid and peer-to-peer computing industry. This volume is also suitable for advanced-level students in computer science.

Brett Green details the prerequisites of airbrushing, including the different types of spray equipment and air sources available, offering advice on appropriate thinners, paint ratios and air pressures to ensure the most appropriate paint coverage across a range of different airbrushing applications. He then examines various airbrushing techniques across a wide range of models. Ten step-by-step, illustrated studies ranging from weathered military aircraft to pristine, high gloss motor vehicles, science fiction models, fantasy figures, groundwork and buildings will complete this in-depth guide to getting the best results on your models.

Synopsis: ?Çó How much does it cost to buy drinks for the passengers of a fully loaded Boeing 727??Çó How does a wealthy business owner take care of his home and property using the children of employees, where both parties benefit from the experience??Çó How many dozen roses does it take to make your female employees happy at Christmas??Çó How to get free farm labor from your sales force and administrative team?Çó How to create a new employee benefit by paying them not to select your healthcare plan?Çó How to make a point to a restaurateur by buying \$100 of cheese toast by the slice?Çó How many drinking games can you play in a single afternoon and still remain relatively sober??Çó How to fire an employee who hates being paid for doing absolutely nothing?Çó How do you get back at a car dealership for poor salesmanship? These and many other burning questions are answered in *The Eccentric Entrepreneur*, a hilarious book of the authors true anecdotes based on his career in a medical laboratory and the man behind the madness, Richard L. Murphy, who made it a truly memorable experience.

Only available English language. Limited & Numbered book. The Real Colors for aircraft models could not be introduced without releasing a special book devoted to this subject. Renowned researchers Maciej Góralczyk, Gerald T. Högl, Jürgen Kiroff, Nicholas Millman and Mikhail V. Orlov teamed up in order to produce the most up-to-date reference book on the aircraft colors of the main WWII adversaries: Germany, United States, Great Britain and Soviet Union. The resulting study is a comprehensive guide to the colors and camouflage schemes, presented on 292 pages and illustrated with 42 color profiles, several document reprints, and 390 b/w and color photos, many of which are very rare. Included is the latest information on the Luftwaffe's late war colors, which have been reproduced as scale colors on the basis of the original paint factory recipes by Gerald T. Högl and Jürgen Kiroff. For the very first time, the unparalleled research on the Soviet Air Force colors done by Mikhail V. Orlov is introduced to the non-Russian readers. Nicholas Millman's archival research brings us accurate reproduction and description of the colors used by the USAAF, US Navy and RAF/FAA. This book is a true must-have for anyone with even a slight interest in WWII aircraft colors.

Readings in Multimedia Computing and Networking captures the broad areas of research and developments in this burgeoning field, distills the key findings, and makes them accessible to professionals, researchers, and students alike. For the first time, the most influential and innovative papers on these topics are presented in a cohesive form, giving shape to the diverse area of multimedia computing. The seminal moments are recorded by a dozen visionaries in the field and each contributing editor provides a context for their area of research by way of a thoughtful, focused chapter introduction. The volume editors, Kevin Jeffay and HongJiang Zhang, offer further incisive interpretations of past and present developments in this area, including those within media and content processing, operating systems, and networking support for multimedia. This book will provide you with a sound understanding of the theoretical and practical issues at work in the field's continuing evolution. * Offers an in-depth look at the technical challenges in multimedia and provides real and potential solutions that promise to expand the role of multimedia in business, entertainment, and education. * Examines in Part One issues at the heart of multimedia processes: the means by which multimedia data are coded, compressed, indexed, retrieved, and otherwise manipulated. * Examines in Part Two the accommodation of these processes by storage systems, operating systems, network protocols, and applications. * Written by leading researchers, the introductions give shape to a field that is continually defining itself and place the key research findings in context to those who need to understand the state-of-the art developments.

This Special Issue of *Marine Drugs* gathers recent investigations on the proteomes, metabolomes, transcriptomes, and the associated microbiomes of marine jellyfish and polyps, including bioactivity studies of their compounds and more generally, on their biotechnological potential, witnessing the increasingly recognized importance of Cnidaria as a largely untapped Blue Growth resource for new drug discovery. These researches evoke the outstanding ecological importance of cnidarians in marine ecosystems worldwide, calling for a global monitoring and conservation of marine biodiversity, so that the biotechnological exploitation of marine living resources will be carried out to conserve and sustainably use the natural capital of the oceans.
