This book is an accompanying textbook for an introductory course in microprocessing. Using the Arduino IDE platform, it explains introductory electronics, programming, microprocessing, and data collection techniques to allow students to start designing and building their own instruments for research projects. The course starts from a beginner level, assuming no prior knowledge in these areas. The format of the book is that of a laboratory manual, which can be used as a stand-alone crash-course for a self-motivated student, or be directly adopted as a course textbook for an elective in a college or university context. This text was originally developed for PHC435 Pharmaceutical Data Acquisition and Analysis, and PHM1138 Electronics for Pharmaceutical Applications at the Leslie Dan Faculty of Pharmacy of the University of Toronto. The book includes various fun lab activities that increase in difficulty, and enough theory and practical advice to help complement the activities with understanding.

Annotation Optical spectroscopy represents one of the most powerful and useful investigation tools. Due to the broad range of applications in scientific and technological Research, its potential is very great. Among the large variety of its branches, a leading role is played by Raman spectroscopy that, allowing the non-destructive material characterisation, is the most-widely utilised diagnostic-tool in Research laboratories. An encounter opportunity for Researchers working in the Spectroscopy field is offered by the Conference organised by the National Group of Raman Spectroscopy and non-linear effects (GNSR). The GNSR Meeting represents an appointment, usually recurring every two years. Its main purpose is to act as a common forum for Spectroscopists, where the most recent and relevant Italian results and applications are presented. The GNSR Conference, hence, constitutes an opportunity for a stimulating exchange of ideas and experiences among the members of the lively Scientific Community involved, including a variety of Scientists, such as Physicists, Chemists, Engineers, Architects, Historians of Art, active in the field of Raman spectroscopy and non-linear effects. Offering the possibility of both divulging assessed results and exploring the feasibility of new projects, the GNSR Meeting promotes the advancement of Raman spectroscopy and related techniques not only in Research, but also in Industry and Education.
