Provide clear guidance to the 2014 changes and ensure in-depth study with accessible content, directly mapped to the new syllabus and approach to learning. This second edition of the highly regarded textbook contains all SL and HL content, which is clearly identified throughout. Options are available free online, along with appendices and data and statistics. - Improve exam performance, with exam-style questions, including from past papers - Integrate Theory of Knowledge into your lessons and provide opportunities for cross-curriculum study - Stretch more able students with extension activities - The shift to concept-based approach to learning , Nature of Science, is covered by providing a framework for the course with points for discussion - Key skills and experiments included

Hydrogen Fuel Cells for Road Vehicles addresses the main issues related to the application of hydrogen fuel cell technology in the road transportation sector. A preliminary treatment is given on fuel resources and atmospheric pollution concerns which are closely related to the current technology (internal combustion engine) used for moving people and goods. The authors deal, in particular, with the problems that can hinder a widespread hydrogen market (production, storage and distribution), as well as giving an analysis of fuel cell technologies available for utilization of this energy carrier in the automotive field. Hydrogen Fuel Cells for Road Vehicles also examines the concerns faced during the design and realization of a PEM fuel cell system with optimal size and efficiency, evidencing the impact of the individual auxiliary components on energy losses and dynamic stack performance. The book ends with the analysis of two practical case studies on fuel cell propulsion systems. Hydrogen Fuel Cells for Road Vehicles is a useful text for researchers, professionals and advanced students in the fields of automotive and environmental engineering.

This collection of essays makes an important contribution to debate about the structure underlying private law and the relationships between its different branches. The contributors, including leading private law scholars from Australia, England and Canada, provide valuable insights by looking beyond the traditional categories and accepted structure of the law of obligations. This book covers three topics. The first is concerned with classification and the law of remedies. The chapters on this topic deal with both the classification of remedies themselves and with remedial issues that cross classificatory boundaries within the law of obligations. The chapters on the second topic reconsider some of the boundaries drawn by judges and scholars within the law of obligations. The third topic deals with the relationship between obligations and property. The chapters in this book offer illuminating new perspectives on fundamental issues in the law of obligations. Together, they provide a thought-provoking reconsideration of connections and boundaries in private law.

This book highlights the relationship between disasters and development through a socio-cultural study of human geography and governance institutions. It studies the cause, context and consequences of disasters in one of the most fragile Himalayan regions in India. The book establishes the fact that disaster management is built within the framework of good governance, without which it has no meaning. For lack of effective and responsive governance, development has lagged behind and even though the frequency of disasters has been increasing, little is being done to redesign developmental frameworks to prevent ensuing losses. Besides, the near absence of governmental support during recurrent disasters, communities have cumulatively become reservoirs of innovations to cope up with disasters. The resilience plans need not follow implanted models but may be cost effective only if they apply a bottom up approach. Just as the region is culturally diverse so are the challenges encountered by local communities in terms of generating resilience to every disaster. Despite more than a decade of the Disaster Management Act (DMA) of 2005, most of the states in this northeastern fringe of India continue to wait for its implementation beyond mere structures and offices. The book suggests that urgent action is required in accordance with the DMA 2005 towards inter-agency coordination, proactive participation of local governance, mobilization of Community based Organizations (CBOs) and curriculum based training in every academic and technical institution. Governments of these northeastern states of India should establish accountability of State Disaster Management Authorities and inspire them to participate proactively with communities for an effective resilience building in the region.

Piano Lessons Made Easy feature popular tunes and captivating illustrations to stimulate the child's musical interest and imagination. This is the second book of three in this series.

Provides extensive information on state-of the art diesel fuel injection technology.
