This book aims to recapitulate old information's available and brings new information's that are with the fashion research on an atomic and nanometric scale in various fields by introducing several mathematical models to measure some parameters characterizing metals like the hydrodynamic elasticity coefficient, hardness, lubricant viscosity, viscosity coefficient, tensile strength ... It uses new measurement techniques very developed and nondestructive. Its principal distinctions of the other books, that it brings practical manners to model and to optimize the cutting process using various parameters and different techniques, namely, using water of high-velocity stream, tool with different form and radius, the cutting temperature effect, that can be measured with sufficient accuracy not only at a research lab and also with a theoretical forecast. This book aspire to minimize and eliminate the losses resulting from surfaces friction and wear which leads to a greater machining efficiency and to a better execution, fewer breakdowns and a significant saving. A great part is devoted to lubrication, of which the goal is to find the famous techniques using solid and liquid lubricant films applied for giving super low friction coefficients and improving the lubricant properties on surfaces.

The Muncie 4-speeds, M20, M21, and M22 are some of the most popular manual transmissions ever made and continue to be incredibly popular. The Muncie was the top high-performance manual transmission GM offered in its muscle cars of the 60s and early 70s. It was installed in the Camaro, Chevelle, Buick GS, Pontiac GTO, Olds Cutlass, and many other classic cars. Many owners want to retain the original transmission in their classic cars to maintain its value. Transmission expert and veteran author Paul Cangialosi has created an indispensable reference to Muncie 4-speeds that guides you through each crucial stage of the rebuild process. Comprehensive ID information is provided, so you can positively identify the cases, shafts, and related parts. It discusses available models, parts options, and gearbox cases. Most important, it shows how to completely disassemble the gearbox, identify wear and damage, select the best parts, and complete the rebuild. It also explains how to choose the ideal gear ratio for a particular application. Various high-performance and racing setups are also shown, including essential modifications, gun drilling the shafts, cutting down the gears to remove weight, and achieving race-specific clearances. Muncie 4-speeds need rebuilding after many miles of service and extreme use. In addition, when a muscle car owner builds a high-performance engine that far exceeds stock horsepower, a stronger high-performance transmission must be built to accommodate this torque and horsepower increase. No other book goes into this much detail on the identification of the Muncie 4-speed, available parts, selection of gear ratios, and the rebuild process.

This new collection investigates German literature in its international dimensions. While no single volume can deal comprehensively with such a vast topic, the nine contributors cover a wide historical range, with a variety of approaches and authors represented. Together, the essays begin to adumbrate the systematic nature of the relations between German national literature and world literature as these have developed through institutions, cultural networks, and individual authors. In the last two decades, discussions of world literature--literature that resonates beyond its original linguistic and cultural contexts--have come increasingly to the forefront of theoretical investigations of literature. One reason for the explosion of world literature theory, pedagogy and methodology is the difficulty of accomplishing either world literature criticism, or world literary history. The capaciousness, as well as the polylingual and multicultural features of world literature present formidable obstacles to its study, and call for a collaborative approach that conjoins a variety of expertise. To that end, this collection contributes to the critical study of world literature in its textual, institutional, and translatorial reality, while at the same time highlighting a question that has hitherto received insufficient scholarly attention: what is the relation between national and world literatures, or, more specifically, in what senses do national literatures systematically participate in (or resist) world literature?
