The books are filled with opportunities for personal expression and activities that stimulate real communication.

Part of a 6-level course in English that teaches communication in real life situations. The language presented is authentic and useful, providing rich input for practice. The books are filled with opportunities for personal expression and activities that stimulate communication.

Part of a 6- level course in English that teaches communication in real life situations. The language presented is authentic and useful, providing rich input for practice. The texts are filled with opportunities for personal expression and activities that stimulate communication.

Level 2B of a six-level course in American English which stresses student comprehension of listening and reading input before they are asked to produce and practise new language. It includes a systematic approach to grammar, with new structures highlighted in dialogues, readings and exercises.

Phase 1. Embracing the spirit of play - - phase 2. Setting the stage for play - - phase 3. Observing children at play - - phase 4. Guided participation in play.

How youth on the autism spectrum negotiate the contested meanings of neurodiversity Autism is a deeply contested condition. To some, it is a devastating disease; to others, it is a fundamental and valued aspect of the self. How do young people growing up with an autism spectrum diagnosis reconcile this conflict, in the context of their own developing identities? While most of the research on Asperger ' s syndrome and related autism spectrum conditions has been conducted with individuals, this book draws on two years of ethnographic work in communities that bring people affected by these conditions together. It is thus well framed to begin to explore the possibilities of autistic culture, by looking at how those on the spectrum make sense of their condition through shared social practices in the places where they live, learn, work, play, and love. Elizabeth Fein brings her many years of experience in both clinical psychology and psychological anthropology to analyze the connection between neuropsychological difference and culture. She argues that current medical models are ill equipped to make sense of autism spectrum conditions and other neurodevelopmental conditions. Instead, youths on the autism spectrum reach beyond medicine for their stories of difference and disorder, drawing on shared mythologies from popular

culture and speculative fiction to conceptualize their experience of changing personhood. In moving and persuasive prose, *Living on the Spectrum* illustrates that young people use these stories to pioneer more inclusive understandings of what makes us who we are.
