A funny and fast-paced story about two best friends whose innocent game could make them not-so legendary, from New York Times bestselling author Gordon Korman. Best friends Jeff and Wiley are legends. There is practically no one in their school who hasn't been nicknamed by the duo. They've dubbed their own underachieving class "The Dim Bulbs"; their pop-eyed principal is better known as "Deer in Headlights"; and their enormous new English teacher, Mr. Hughes, is "Mr. Huge." But now some of the nicknames that Jeff and Wiley have invented are backfiring on them. Will the duo be able to get it together before it's too late?

Science, engineering, and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges. The United States' position in the global economy is declining, in part because U.S. workers lack fundamental knowledge in these fields. To address the critical issues of U.S. competitiveness and to better prepare the workforce, A Framework for K-12 Science Education proposes a new approach to K-12 science education that will capture students' interest and provide them with the necessary foundational knowledge in the field. A Framework for K-12 Science Education outlines a broad set of expectations for students in science and engineering in grades K-12. These expectations will inform the development of new standards for K-12 science education and, subsequently, revisions to curriculum, instruction, assessment, and professional development for educators. This book identifies three dimensions that convey the core ideas and practices around which science and engineering education in these grades should be built. These three dimensions are: crosscutting concepts that unify the study of science through their common application across science and engineering; scientific and engineering practices; and disciplinary core ideas in the physical sciences, life sciences, and earth and space sciences and for engineering, technology, and the applications of science. The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science-related issues, be careful consumers of scientific and technical information, and enter the careers of their choice. A Framework for K-12 Science Education is the first step in a process that can inform state-level decisions and achieve a research-grounded basis for improving science instruction and learning across the country. The book will guide standards developers, teachers, curriculum designers, assessment developers, state and district science administrators, and educators who teach science in informal environments.

In the early 1800s, people began to harvest ice, store it in ways that limited melting, and transport it to homes and businesses. Eventually, almost everyone had an icebox, and a huge, vital ice business grew. In this riveting book, acclaimed writer Laurence Pringle describes the key inventions and ideas that helped the ice business flourish. He points to the many sources of ice throughout the East and Midwest and spotlights Rockland Lake, "the icebox of New York City," to offer a close-up look at the ice business in action. Pringle worked closely with experts and relied on primary documents, including archival photographs, postcards, prints, and drawings, to capture the times
