The use of flax fiber in the manufacturing of cloth in Northern Europe dates back to Neolithic times. During the late medieval period, cotton began to be imported into Northern Europe . Without any knowledge of what it came from, other than that it was a plant , noting its similarities to wool, people in the region could only imagine that cotton must be produced by plant-borne sheep.

Textile manufacture during the Industrial Revolution in Britain was centred in south Lancashire and the towns on both sides of the Pennines. In Germany it was concentrated in the Wupper Valley, Ruhr Region and Upper Silesia, in Spain it was concentrated in Catalonia while in the United States it was in New England. The main key drivers of the Industrial Revolution were textile manufacturing, iron founding, steam power, oil drilling, the discovery of electricity and its many industrial applicatio

Textile manufacture during the British Industrial ...

By 1630 the manufacture of medleys was well established in north-west Wiltshire. In 1633 it was said to have grown up 'since any Parliament took care of the business', which probably meant since the Clothing Statute of 1624.

Abstract In 1964, the newly established Hong Kong-based Cha Group partnered with the Northern Nigerian Regional Development Corporation to open the United Nigerian Textiles Limited (UNTL) mill in Kaduna – the largest textile mill in Northern Nigeria. The Cha Group later expanded, building textile mills in other parts of the country.

Author Brent D. Glass examines North Carolina's textile industry from its roots in the spinning wheels and handlooms of the colonial and antebellum periods through the massive buy-outs, consolidations, and plant closings of the 1980s. Contains more than 50 black-and-white illustrations and a selected bibliography.

Until this century, Northern Nigeria was a major center of textile production and trade. Textile Ascendancies: Aesthetics, Production, and Trade in Northern Nigeria examines this dramatic change in textile aesthetics, technologies, and social values in order to explain the extraordinary shift in textile demand, production, and trade. Textile Ascendancies provides information for the study of the demise of textile manufacturing outside Nigeria. The book also suggests the conundrum considered by George Orwell concerning the benefits and disadvantages of “ mechanical progress, ” and digital progress, for human existence. While textile mill workers in northern Nigeria were proud to participate in the mechanization of weaving, the “ tendency for the mechanization of the world ” represented by more efficient looms and printing equipment in China has contributed to the closing of Nigerian mills and unemployment. Textile Ascendancies will appeal to anthropologists for its analyses of social identity as well as how the ethnic identity of consumers influences continued handwoven textile production. The consideration of aesthetics and fashionable dress will appeal to specialists in textiles and clothing. It will be useful to economic historians for the comparative analysis of textile manufacturing decline in the 21st century. It will also be of interest to those thinking about global futures, about digitalization, and how new ways of making cloth and clothing may provide both employment and environmentally sound production practices.

The purpose of this research was to improve the decision making process of textile manufacturers by providing information on how the North Carolina textile manufacturing industry is using e-business. This study reveals what e-business initiatives North Carolina textile manufacturers are currently using, the initiatives that they are planning to invest in next, the benefits experienced, the challenges faced, and in what business areas they expect to see the greatest future benefits from e-business for the textile industry. It is important to note that the focus of this study is on business-to-business e-business in textile mills and does not include textile product mills or apparel manufacturers. The methodology used in this study consisted of two phases. Phase I was an analysis of secondary sources. A database of textile manufacturing companies in North Carolina with a primary NAICS code of 313 was compiled. The resultant database was used to develop the sample for Phase II-A, the questionnaire. The questionnaire was developed by the researcher based on information collected from the literature review and the analysis of similar studies performed abroad. Phase II of the study consisted of two parts. Phase II-A was the distribution and analysis of the questionnaire. The resulting response rate was 38.1%, with 117 total usable responses. Phase II-B utilized case study methodology and built on the results of the questionnaire to gain a more in-depth understanding of the subject. The sample for the case studies consisted of 7 companies in North Carolina and 2 companies in South Carolina. The results indicate a limited degree of implementation of e-business in the textile mill sector of the North Carolina textile industry. While websites were used by 67% of the survey respondents, few are using e-business to its full potential. Telephone, fax, and email still seem to be the prevalent methods of communication with business partners, especially for small and medium sized f.

This book draws upon thinking about the work of the dead in the context of deindustrialization—specifically, the decline of the textile industry in Kaduna, Nigeria—and its consequences for deceased workers' families. The author shows how the dead work in various ways for Christians and Muslims who worked in KTL mill in Kaduna, not only for their families who still hope to receive termination remittances, but also as connections to extended family members in other parts of Nigeria and as claims to land and houses in Kaduna. Building upon their actions as a way of thinking about the ways that the dead work for the living, the author focuses on three major themes. The first considers the growth of the city of Kaduna as a colonial construct which, as the capital of the Protectorate of Northern Nigeria, was organized by neighborhoods, by public cemeteries, and by industrial areas. The second theme examines the establishment of textile mills in the industrial area and new ways of thinking about work and labor organization, time regimens, and health, particularly occupational ailments documented in mill clinic records. The third theme discusses the consequences of KTL mill workers' deaths for the lives of their widows and children. This book will be of interest to scholars of African studies, development studies, anthropology of work, and the history of industrialization.
