The Archaeology of China: From the Late Paleolithic to the ...

The archaeology of China is researched intensively in the universities of the region and also attracts considerable international interest on account of the region's civilizations. The application of scientific archaeology to Chinese sites began in 1921, when Johan Gunnar Andersson first excavated the Yangshao Village sites in Henan. Excavations from 1928 at Anyang, also in northern Henan, by the newly formed Academia Sinica by anthropologist Li Ji uncovered a literate civilization identified wi

Published with the Society for the Study of Early China Early China publishes original research on all aspects of the culture and civilization of China from earliest times through the Han dynasty period (CE 220). The journal is interdisciplinary in scope, including articles on Chinese archaeology, history, philosophy, religion, literature, and paleography.

Early China | Cambridge Core

Of the 100 discoveries selected, 51% were made by scientific initiative, whereas 31% were made accidentally and 10% were rescue archaeology. More than half of the academic discoveries were made in the Yellow River region, reflecting the traditional view, held by most archaeologists until the 1980s, that the Chinese civilization originated there.

Chinese archaeology has been practiced since the Song dynasty with early practices of antiquarianism. Although native Chinese antiquarianism developed some rigorous methods of unearthing, studying, and cataloging ancient artifacts, the field of archaeology never developed into a branch of study outside of Chinese historiography. Native Chinese antiquarian studies waned after the Song period but were revived during the Qing dynasty.

The Archaeology of Early China (豆瓣)

This excavation thus marked the beginning of a modern Chinese archaeology endowed with great potential to reveal much of China's ancient history.. Half a century later, Chinese archaeology had made many unprecedented discoveries which surprised the world, leading Glyn Daniel to believe that "a new awareness of the importance of China will be a key development in archaeology in the decades ahead (Daniel 1981: 211).

This volume aims to satisfy a pressing need for an updated account of Chinese archaeology. It covers an extended time period from the earliest peopling of China to the unification of the Chinese Empire some two thousand years ago. The geographical coverage includes the traditional focus on the Yellow River basin but also covers China's many other regions. Among the topics covered are the emergence of agricultural communities; the establishment of a sedentary way of life; the development of sociopolitical complexity; advances in lithic technology, ceramics, and metallurgy; and the appearance of writing, large-scale public works, cities, and states. Particular emphasis is placed on the great cultural variations that existed among the different regions and the development of interregional contacts among those societies.

1500 to 221 B.C. as revealed in recent archaeological discoveries.

"Past, present and future "The archaeological materials recovered from the Anyang excavations ... in the period between 1928 and 1937...have laid a new foundation for the study of ancient China (Li, C. 1977: ix)." When inscribed oracle bones and enormousmaterial remains were found through scientific excavation in Anyang in 1928, the historicity of the Shang dynasty was confirmed beyond dispute for the first time (Li, C. 1977: ix-xi). This excavation thus marked the beginning of a modern Chinese archaeology endowed with great potential to reveal much of China's ancient history.. Half a century later, Chinese archaeology had made many unprecedented discoveries which surprised the world, leading Glyn Daniel to believe that "a new awareness of the importance of China will be a key development in archaeology in the decades ahead (Daniel 1981: 211). This enthusiasm was soon shared by the Chinese archaeologists when Su Bingqi announced that "the Golden Age of Chinese archaeology is arriving (Su, B. 1994: 139–140)". In recent decades, archaeology has continuously prospered, becoming one of the most rapidly developing fields in social science in China"--

This book covers Chinese archaeology from the first people to the unification of the empire, emphasizing cultural variations and interregional contact.

Cloth edition available for \$50.00.

In *Excavating the Afterlife*, Guolong Lai explores the dialectical relationship between sociopolitical change and mortuary religion from an archaeological perspective. By examining burial structure, grave goods, and religious documents unearthed from groups of well-preserved tombs in southern China, Lai shows that new attitudes toward the dead, resulting from the trauma of violent political struggle and warfare, permanently altered the early Chinese conceptions of this world and the afterlife. The book grounds the important changes in religious beliefs and ritual practices firmly in the sociopolitical transition from the Warring States (ca. 453–221 BCE) to the early empires (3rd century–1st century BCE). A methodologically sophisticated synthesis of archaeological, art historical, and textual sources, *Excavating the Afterlife* will be of interest to art historians, archaeologists, and textual scholars of China, as well as to students of comparative religions. A critical new interpretation of the early history of Chinese civilization based on the most recent scholarship and archaeological discoveries.

The study of early China has been radically transformed over the past fifty years by archaeological discoveries, including both textual and non-textual artefacts. Excavations of settlements and tombs have demonstrated that most people did not lead their lives in accordance with ritual canons, while previously unknown documents have shown that most received histories were written retrospectively by victors and present a correspondingly anachronistic perspective. This handbook provides an authoritative survey of the major periods of Chinese history from the Neolithic era to the fall of the Latter Han Empire and the end of antiquity (AD 220). It is the first volume to include not only a comprehensive review of political history but also detailed treatments of topics that transcend particular historical periods, such as: Warfare and political thought Cities and agriculture Language and art Medicine and mathematics Providing a detailed analysis of the most up-to-date research by leading scholars in the field of early Chinese history, this book will be useful to students and scholars of Chinese history, Asian archaeology, and Chinese studies in general.

Writing and the Ancient State is a comparative study of the use of writing to create and maintain order in early states.

Paleolithic sites from one million years ago, Neolithic sites with extraordinary jade and ceramic artifacts, excavated tombs and palaces of the Shang and Zhou dynasties—all these are part of the archaeological riches of China. This magnificent book surveys China's archaeological remains and in the process rewrites the early history of the world's most enduring civilization. Eminent scholars from China and America show how archaeological evidence establishes that Chinese culture did not spread from a single central area, as was long assumed, but emerged out of geographically diverse, interacting Neolithic cultures. Taking us to the great archaeological finds of the past hundred years—tombs, temples, palaces, cities—they shed new light on many aspects of Chinese life. With a wealth of fascinating detail and hundreds of reproductions of archaeological discoveries, including very recent ones, this book is an invaluable resource for anyone interested in Chinese antiquity and Chinese views on the formation of their own civilization.
