Acting in a socially-responsible manner has become a crucial success factor for many international firms due to the highly complex, competitive, and volatile global environment in which they operate. This book will contribute new ideas, contemporary knowledge, and original research to the area of socially-responsible international business, and offers challenging directions for future research. Topic covered range from global environmental influences on acting in a socially-responsible way; foreign buyer reactions to responsible business and international market targeting to development of socially-responsible international business strategies.

Business schools around the world have grown and prospered in the last few decades, but what does the future hold for business schools? This book explores the potential future disruption of the business school tradition by considering funding, value chains, strategic groups, value orientation, innovation and business models.

"Continuous, clean, and uninterrupted power and cooling is the lifeblood of any data center, especially one that operates 24 hours a day, 7 days a week. Critical enterprise power is the power without which an organization would quickly be unable to achieve its business objectives. Today, more than ever, enterprises of all types and sizes are demanding 24-hour system availability. This means enterprises must have 24-hour power and cooling day after day, year after year. One such example is the banking and financial services industry. Business practices mandate continuous uptime for all computer and network equipment to facilitate round-the-clock trading and banking processes anywhere, and everywhere, from any device in the world. Banking and financial service firms are completely intolerant of unscheduled downtime, given the guaranteed loss of business that invariably results. However, providing the best equipment is not enough to ensure 24-hour operation throughout the year. The goal is to achieve reliable 24-hour power, cooling, and processing at all times, regardless of the technological sophistication of the equipment or the demands placed upon that equipment by the end-user, be it business or municipality"--

This handbook provides a consolidated, comprehensive information resource for engineers working with mission and safety critical systems. Principles, regulations, and processes common to all critical design projects are introduced in the opening chapters. Expert contributors then offer development models, process templates, and documentation guidelines from their own core critical applications fields: medical, aerospace, and military. Readers will gain in-depth knowledge of how to avoid common pitfalls and meet even the strictest certification standards. Particular emphasis is placed on best practices, design tradeoffs, and testing procedures. *Comprehensive coverage of all key concerns for designers of critical systems including standards compliance, verification and validation, and design tradeoffs *Real-world case studies contained within these pages provide insight from experience

The second book in the Fast Future series, The Future Reinvented, explores how our notions of the future are themselves being reinvented. The authors challenge us to reimagine how life, society, key industries, and the conduct of business could be transformed by a combination of radical technological, scientific, social, and economic developments shaping the decade ahead. The Future Reinvented offers unique snapshots of different aspects of a future in which the very tenets of reality are undergoing deep and vital transformations. The book is organized into three sections covering transformations in life and society, industries, and business, and presents holistic future scenarios that encourage strategic thinking about what lies beyond the hype.

A Very Human Future is written from the premise that the pace of penetration and scale of disruption of new technologies requires us to adopt a new all-encompassing protective logic for society moving forward. Enriching Humanity in a Digitized World means placing humanity at the center of the agenda so that we avoid dehumanizing ourselves and future generations. As society enters the fourth industrial revolution, a major question arises—can we harness intense technological bursts of possibility to bring about a better world? A Very Human Future illustrates how the evolution of society, cities, people, businesses, industries, nations, and governments are being unexpectedly entangled by exponential technological disruption. This is not a book about technology but an exploration of how we make it serve humanity’s highest needs and ambitions. Each chapter looks at how new ideas enabled by emerging technologies are straining the old social fabric, and proposes radical future scenarios, strategies, and actions to safeguard humanity from harm and enhance opportunity for all. This book is a manifesto for a future that is better than the past. A Very Human Future rejects an outlook where human beings live a mundane existence while technologies burst with possibility. Rather, we use this book to endorse a proactive approach to the future where technology is designed to benefit humanity purposefully and intentionally. To advocate for A Very Human Future we ask, for example, how do we use technology to overcome gender bias or to impart a meaningful education to new generations? Can artificial intelligence tools make government more trustworthy and help us deal with the impacts of automation replacing humans? What rights should people have when residing in smart cities? The scale of the new technologies requires a protective logic for moving forward, keeping humanity at the centre so that we avoid dehumanizing ourselves and future generations. A Very Human Future is not one, but many: positive stories and visions of the future can be powerful beacons for social adaptation. We argue that the time to control the narrative of the future and stake a claim for humanity is now. A Very Human Future uses knowledge as power, describing surprising ways new thinking and disruptive technology can impact society. This book explains that protecting what’s human is the key to retaining our dominance over future technological progress.

In a global survey by the Katzenbach Center, 80 percent of respondents believed that their organization must evolve to succeed. But a full quarter of them reported that a change effort at their organization had resulted in no visible results. Why? The fate of any change effort depends on whether and how leaders engage their culture: the self-sustaining patterns of behaving, feeling, thinking, and believing that determine how things are done in an organization. Culture is implicit rather than explicit, emotional rather than rational—that’s what makes it so hard to work with, but that’s also what makes it so powerful. For the first time, this book lays out the Katzenbach Center’s proven methodology for identifying your culture’s three most critical elements: traits, characteristics that are at the heart of people’s emotional connection to what they do; keystone behaviors, actions that would lead your company to succeed if they were replicated at a greater scale; and authentic informal leaders, people who have a high degree of “emotional intuition” or social connectedness. By leveraging these critical few elements, you can tap into a source of catalytic change within your organization. People will make an emotional, not just a rational, commitment to new initiatives. You will elicit enthusiasm and creativity and build the kind of powerful company that people recognize for its innate value and effectiveness.

HOUSTON, WE HAVE A PROBLEM... Life is fragile. The difference between success and failure can come down to nothing - the thread of a screw, the flick of a switch - and when it goes wrong, you fix it. Or someone dies. Mission Critical takes us from our world, across the Solar System, and out into deep space to tell the stories of people who had to do the impossible. And do it fast. Featuring stories by Peter F. Hamilton, Yoon Ha Lee, Alette de Bodard, Greg Egan, Linda Nagata, Gregory Feely, John Barnes, Tobias S. Buckell, Jason Fischer & Sean Williams, Carolyn Ives Gilman, John Meaney, Dominica Phetteplace, Allen M. Steele, Kristine Kathryn Rusch, and Peter Watts.
