"Brown's book Just Enough is a compelling account of how Edo Japan confronted similar environmental problems and created solutions that connected farms and cities, people and nature." —Huffington Post The world has changed immeasurably over the last thirty years, with more, bigger, better being the common mantra. But in the midst of this constantly evolving world, there is a growing community of people who are looking at our history, searching for answers to issues that are faced everywhere, such as energy, water, materials, food and population crisis. In Just Enough, author Azby Brown turned to the history of Japan, where he finds a number of lessons on living in a sustainable society that translate beyond place and time. This book of stories depicts vanished ways of life from the point of view of a contemporary observer and presents a compelling argument around how to forge a society that is conservation-minded, waste-free, well-housed, well-fed and economically robust. Included at the end of each section are lessons in which Brown elaborates on what Edo Period life has to offer us in the global battle to reverse environmental degradation. Covering topics on everything from transportation, interconnected systems, and waste reduction to the need for spiritual centers in the home, there is something here for everyone looking to make changes in their life. Just Enough is a much-needed beacon in our evolving world, giving us hope in our efforts to achieve sustainability now.

A remarkable classic work on traditional Japanese architecture and its general integrative quality, the order of space and form, the flexibility of partitions and room functions and other important or unique qualities. The author describes in detail, and with numerous architectural plans and drawings, the influence of the anatomy of the Japanese human body on traditional units of measurement and on house construction. This work is not simply a description of the features of the Japanese house, but "an invitation to probe the possibilities of utilizing this architectural achievement of the Japanese ...in modern living and building," according to the author, who further believes that the unique features of the Japanese house are better suited to serve as a pattern for contemporary housing than any other form of residential structure.

A rare view of master carpenters at work on the reconstruction of an eighth-century temple captures the technical side of traditional Japanese techniques as well as the spirit of the craft.

This text shows how to use Japanese tools effectively and maintain them properly, and explains the role they play in traditional Japanese craftsmanship. It describes how to create razor-sharp cutting edges and introduces almost 50 different planes.

Eighteen recent houses, from ultramodern to Japanese rustic, are explored in depth. Particular emphasis is given to what the author call the Big Idea—the overarching concept that does the most to make the house feel more spacious than it actually is. Among the Big Ideas introduced here are ingenious sources of natural light, well-thought-out atriums, snug but functional kitchens, unobtrusive partitions, and free-flowing circulation paths.An introduction by the author puts the house designs in the context of lifestyle trends, and highlights their shared characteristics. For each project, the intentions of the designers and occupants are examined. The result is a very human sensibility that runs through the book. A glimpse of the dreams and aspirations that these unique homes represent and that belies their apparent modesty.The second half of the book is devoted to illustrating the special features in the homes, from clever storage and kitchen designs, to ingenious skylights and nooks. As with his earlier Small Spaces, Azby Brown has given home owners, designers, and architects a fascinating new collection of thought-provoking ideas.

Japan is known to be a country of wood and "wood culture". Written sources on the practical aspect of traditional woodcraft, however, are scarce. For this reason it was decided to undertake a study based on in-depth interviews of craftsmen who are specialised in various fields of traditional woodworking. From the data thus obtained it was possible to study the materials used, the techniques, the nomenclature, the aesthetics and the culture prevailing in the various fields of woodcraft. As a result both the technical and the symbolic and aesthetic properties of wood and woodworking become apparent, as seen from the point of view of Japanese craftsmen who owe their skill and expertise to traditions passed from one generation to the next. As such, this study contributes towards opening a new field of research for art historians, ethnobotanists, archaeologists and japanologists by supplying them with new means and tools to supplement their own. Apart from that, the present study, focusing on wood in all its aspects as it does, ties in with an academic trend that has been developing in Japan over the past few decades.
