climb. Their goals on this first mountain are the ones our culture endorses: to be a success, to make your mark, to experience personal happiness. But when they get to the top of that mountain, something happens. They look around and find the view . . . unsatisfying. They realize: This wasn't my mountain after all. There's another, bigger mountain out there that is actually my mountain. And so they embark on a new journey. On the second mountain, life moves from self-centered to other-centered. They want the things that are truly worth wanting, not the things other people tell them to want. They embrace a life of interdependence, not independence. They surrender to a life of commitment. In *The Second Mountain*, David Brooks explores the four commitments that define a life of meaning and purpose: to a spouse and family, to a vocation, to a philosophy or faith, and to a community. Our personal fulfillment depends on how well we choose and execute these commitments. Brooks looks at a range of people who have lived joyous, committed lives, and who have embraced the necessity and beauty of dependence. He gathers their wisdom on how to choose a partner, how to pick a vocation, how to live out a philosophy, and how we can begin to integrate our commitments into one overriding purpose. In short, this book is meant to help us all lead more meaningful lives. But it's also a provocative social commentary. We live in a society, Brooks

argues, that celebrates freedom, that tells us to be true to ourselves, at the expense of surrendering to a cause, rooting ourselves in a neighborhood, binding ourselves to others by social solidarity and love. We have taken individualism to the extreme—and in the process we have torn the social fabric in a thousand different ways. The path to repair is through making deeper commitments. In *The Second Mountain*, Brooks shows what can happen when we put commitment-making at the center of our lives.

\* Our summary is short, simple and pragmatic. It allows you to have the essential ideas of a big book in less than 30 minutes. As you read this summary, you will learn how to adopt an ethic of life where sharing and altruism take precedence over your personal desires. You will also learn : that you live in a society where each individual is more self-centered; that your personal success is not synonymous with fulfillment; that you will go through a crisis in your life that will move you from one ideal to another; that love and sharing are the secret of a selfless life; that your commitments to others will transcend you. Having climbed the mountain of professional ambition and independence, you thought you had reached the final goal of your life: personal success. It was without counting on the existence of a second mountain to climb. This one represents spirituality and love of others. This second

James Turner Johnson goes beyond the examination of moral restraints on the occasion and conduct of war to a critical study of the moral thinking that has aimed at its prevention. sectarian pacifism of withdrawal from the world and its evils, and the Utopian world-perfecting pacifism that finds the cure for discord among nations in the establishment of a new, more nearly universal, and rightly constituted political order. Revealing the historical depth of all three traditions, the book shows that contemporary "nuclear pacifism" derives from forms of thought that are centuries old. Originally published in 1987. defining theme of governance of life. With an emphasis on how to achieve an adequate life, the contributors integrate a whole range of life-related domains including: the death of Sun Zhigang, the peril caused by rising tobacco consumption, the emerging suicide intervention, the turning points in the fight against AIDS, the intensely evolving birth policy, the emerging biological citizenship, and so on. In doing so, they explore how biological life has been governed differently to enhance the wellbeing of the population instead of promoting ideological goals. This change, dubbed "the deepening in governmentality," is one of the most important driving forces for China's rise, and will have huge bearings on how the Chinese will achieve an adequate life in the 21st century. This book presents works by a number of internationally known scholars and will be of interest to students and scholars of anthropology, sociology, political science, history, Chinese philosophy, law, and public health.

The study of the quest for the good life and the morality and value it presupposes is not new. To the contrary, this is an ancient issue; its intellectual history can be traced back to Aristotle. In anthropology, the study of morality and value has always been a central concern, despite the claim of some scholars that the recent upsurge of interest in these issues is new. What is novel is how

scholars in many disciplines are posing the value question in new ways. The global economic alignments of the present pose many political, moral and theoretical questions, but the central issue the essays in this collection address is: how do relatively poor people of the Australia-Pacific region survive in current precarious times? In looking to answer this question, contributors directly engage the values and concepts of their interlocutors. At a time when understanding local implications of global processes is taking on new urgency, these essays bring finely honed anthropological perspectives to matters of universal human concern—they offer radical empirical critique based on intensive fieldwork that will be of great interest to those seeking to comprehend the bigger picture.

Why efforts to create a scientific basis of morality are neither scientific nor moral In this illuminating book, James Davison Hunter and Paul Nedelisky trace the origins and development of the centuries-long, passionate, but ultimately failed quest to discover a scientific foundation for morality. The "new moral science" led by such figures as E. O. Wilson, Patricia Churchland, Sam Harris, Jonathan Haidt, and Joshua Greene is only the newest manifestation of that quest. Though claims for its accomplishments are often wildly exaggerated, this new iteration has been no more successful than its predecessors. But rather than giving up in the face of this failure, the new moral science has taken a surprising turn. Whereas earlier efforts sought to demonstrate what is right and wrong, the new moral scientists have concluded, ironically, that right and wrong don't actually exist. Their (perhaps unwitting) moral nihilism turns the science of morality into a social engineering project. If there is nothing moral for science to discover, the science of morality becomes, at best, a feeble program to achieve arbitrary societal goals. Concise and rigorously argued, *Science and the Good* is a definitive critique of a would-be science that has gained extraordinary influence in

public discourse today and an exposé of that project's darker turn.
