"Complete with painfully wry observations and delightfully caustic wit, this novel is a gritty exploration of what it's like to feel incomplete in the world. All five fingers up for this bitterly satisfying tale." -Kirkus Reviews (starred) Aaron is not a man on a hero's journey. In the question of fight or flight, he'll choose flight every time. So when a car accident leaves him suddenly asymmetrical, his left arm amputated, looking on the bright side just isn't something he's equipped to do. Forced to return to his boyhood home to recuperate, Aaron is confronted with an aging father (a former Olympic biathlete turned hoarder), a mother whose chosen to live in a yurt with a fireman twelve years her junior, and a well-meaning sister whose insufferable husband proves love isn't just blind, but also painfully stupid. As Aaron tries to make the world around him disappear in a haze of Vicodin and medical marijuana, the only true joy in his life comes from daily ninety-second radio spots of fun science facts: the speed of falling raindrops, batteries made out of starfish, and sexual responses triggered by ringtones - all told in the lush, disembodied voice of commentator Sunny Lee, with whom he falls helplessly, ridiculously, in love. Aaron's obsession with Sunny only hastens his downward spiral, like pouring accelerant on a fire. Pressured to do something - anything - to move his life forward, he takes the only job he can get. As a "fish counter" at the nearby dam, he concludes that an act of violent sacrifice to liberate the river might be his best, final option.

Historian Ronald H. Spector, drawing on declassified intelligence files, an abundance of British and American archival material, Japanese scholarship and documents, and the research and memoirs of scholars, politicians, and the military men, presents a thrilling narrative of American war in the Pacific. Spector reassesses U.S. and Japanese strategy and offers some provocative interpretations. He shows that the dual advance across the Pacific by MacArthur and Nimitz was less a product of strategic calculation and more a pragmatic solution to bureaucratic, doctrinal, and public relations problems facing the Army and Navy. He also argues that Japan made its fatal error not in the Midway campaign but in abandoning its offensive strategy after that defeat and allowing itself to be drawn into a war of attrition. Combining impeccable research with electrifying detail, Spector vividly recreates the major battles, little-known campaigns, and unfamiliar events of this brutal 44-month struggle. He reveals that the U.S. had secret plans to wage unrestricted submarine warfare against Japan months before Pearl Harbor and demonstrates that MacArthur and his commanders ignored important intercepts of Japanese messages that would have saved thousands of lives in Papua and Leyte. He skillfully takes the reader from top-secret strategy meetings in Washington, London, and Tokyo to distant beaches and remote Asian jungles with battle-weary GIs. Throughout, Spector contends that American decisions in the Pacific War

were shaped more often by the struggles between the British and the Americans, and between the Army and the Navy, than by strategic considerations. Revealing what really happened in the course of a conflict that ended with the most deadly air raid ever, this contribution to WWII history adds a new dimension to our understanding of the people and forces that determined its outcome.

Calculus: Single and Multivariable, 7th Edition continues the effort to promote courses in which understanding and computation reinforce each other. The 7th Edition reflects the many voices of users at research universities, four-year colleges, community colleges, and secondary schools. This new edition has been streamlined to create a flexible approach to both theory and modeling. The program includes a variety of problems and examples from the physical, health, and biological sciences, engineering and economics; emphasizing the connection between calculus and other fields.

Over a millennium ago, Erna, a seismically active yet beautiful world was settled by colonists from far-distant Earth. But the seemingly habitable planet was fraught with perils no one could have foretold. The colonists found themselves caught in a desperate battle for survival against the fae, a terrifying natural force with the power to prey upon the human mind itself, drawing forth a person's worst nightmare images or most treasured dreams and indiscriminately giving them life. Twelve centuries after fate first stranded the colonists on Erna, mankind has achieved an uneasy stalemate, and human sorcerers manipulate the fae for their own profit, little realizing that demonic forces which feed upon such efforts are rapidly gaining in strength. Now, as the hordes of the dark fae multiply, four people—Priest, Adept, Apprentice, and Sorcerer—are about to be drawn inexorably together for a mission which will force them to confront an evil beyond their imagining, in a conflict which will put not only their own lives but the very fate of humankind in jeopardy.

Reflexivity has become a common term in IR scholarship with a variety of uses and meanings. Yet for such an important concept and referent, understandings of reflexivity have been more assumed rather than developed by those who use it, from realists and constructivists to feminists and post-structuralists. This volume seeks to provide the first overview of reflexivity in international relations theory, offering students and scholars a text that : provides a comprehensive and systematic overview of the current reflexivity literature develops important insights into how reflexivity can play a broader role in IR theory pushes reflexivity in new, productive directions, and offers more nuanced and concrete specifications of reflexivity moves reflexivity beyond the scholar and the scholarly field to political practice Formulates practices of reflexivity. Drawing together the work of many of the key scholars in the field into one volume, this work will be essential reading for all students of international relations theory.

The Calculus Consortium's focus on the "Rule of Four" (viewing problems graphically, numerically, symbolically, and verbally) has become an integral part of teaching calculus in a way that promotes critical thinking to reveal solutions to mathematical problems. Their approach reinforces the conceptual understanding necessary to reduce complicated problems to simple procedures without losing sight of the practical value of mathematics. In this edition, the authors continue their focus on introducing different perspectives for students with an increased emphasis on active learning in a 'flipped' classroom. The 8th edition of Calculus: Single and Multivariable features a variety of problems with applications from the physical sciences, health, biology, engineering, and economics, allowing for engagement across multiple majors. The Consortium brings Calculus to (real) life with current, relevant examples and a focus on active learning.
