The Velocity of Honey and More Science of Everyday Life ...

The Velocity of Honey (Subtitle: and More Science of Everyday Life), by Jay Ingram Ingram's book does have one chapter on honey, but really each chapter is its own topic. If there is any unifying theme, it is the same as the one that binds these three books together here: science can tell you something useful on almost any topic, and also discover questions we didn't even realize we didn't know the answer to.

The Velocity of Honey: and More Science of Everyday Life ...

Jay Ingram, The Velocity of Honey (Thunder's Mouth Press, 2003) There is a kind of niche genre in publishing that involves taking complicated science and stripping it of all its jargon to make it (somewhat) understandable to mortal men. Some authors are good at it.

Why doesn't honey flow out in all directions across your toast? What's the science behind the theory of 'six degrees of separation'? How do stones 'skip'? When visiting a new place, why does getting there always seem to take so much longer than returning home? In The Velocity of Honey, bestselling author Jay Ingram muses upon these and many more daily mysteries that puzzle and perplex. From mosquitoes to the Marvel Universe, baseball to baby-holding, Ingram's topics are diverse. He also makes startling connections. In some pieces, he relates anecdotes from the history of science and demonstrates their relevance to contemporary scientific debates. In others, he explores the science behind many of our proverbial expressions, common sayings such as 'time flies when you're having fun' and 'it's a small world after all.' In still others, he highlights intriguing links between the worlds of art and science. As in his hugely popular The Science of Everyday Life, Ingram makes the science of our lives accessible and fascinating.

Why does a dropped slice of toast always land butter side down? What's the science behind 'six degrees of separation'? How do stones 'skim'? Why, when we visit somewhere new, does it seem to take far longer to get there than to come back? These are the kind of intriguing mysteries of everyday life that Jay Ingram's new book sets out to solve by scientific investigation. Where so many supposedly popular science books these days are densely argued and strenuously theoretical works about quantum physics or the uncertainty theory that at the very least would not be leisure reading for the average bookbuyer, The Velocity of Honey is that rare article, a genuinely popular, readable and entertaining science book.

Have you ever felt a sudden rush of recognition that you've been in a place before? What causes a déjà vu? Why do dogs look like their owners? What's up with insect swarms? What's the science behind showing your tongue? Do you keep drier by walking or running through a rainstorm? In this updated and expanded edition of The Science of Everyday Life, bestselling author Jay Ingram explains these and many more weird and fascinating mysteries.

• Chapter wise and Topic wise introduction to enable quick revision. • Coverage of latest typologies of questions as per the Board latest Specimen papers • Mind Maps to unlock the imagination and come up with new ideas. • Concept videos to make learning simple. • Latest Solved Paper • Previous Years' Board Examination & Board Specimen Questions with detailed explanation to facilitate exam-oriented preparation. • Commonly Made Errors & Answering Tips to aid in exam preparation. • Dynamic QR code to keep the students updated for 2021 Exam paper or any further CISCE notifications/circulars.
