A corpse sends a simple scientist into a dark world of conspiracy and murder in this crime thriller by the USA Today –bestselling author The Deadline. When a world-renowned forensic anthropologist journeys to Winchester, Wyoming, to examine the long-dead remains of a woman who claimed to be Etta Place—the Old West ' s most mysterious and legendary female outlaw—he ' s not expecting to find a man ' s headless corpse in her crypt. The grisly discovery plunges him and Jefferson Morgan—the editor of the weekly Winchester Bullet—into a shadowy and deadly world of satellite-savvy highway pirates, rural meth labs, computer hackers and old-fashioned corruption. And they might not survive the fall.... " Gorgeously written, complex and satisfying—a damn near perfect mystery. " —John Lescroart, New York Times –bestselling author " A great job with a fresh, original idea. The Obituary weaves elements of the best forensics writers at work today, as well as the best detective writers—a great mix. " —Michael Palmer, New York Times –bestselling author

Commentary on Tirukkural, ancient Tamil classic verse by Tiruvalluvar; includes text with English translation.

This is the first comprehensive treatment of the interaction of femtosecond laser pulses with solids at nonrelativistic intensity. It connects phenomena from the subtle atomic motion on the nanoscale to the generation of extreme pressure and temperature in the interaction zone confined inside a solid. The femtosecond laser-matter interaction has already found numerous applications in industry, medicine, and materials science. However, there is no consensus on the interpretation of related phenomena. With mathematics kept to a minimum, this is a highly engaging and readable treatment for students and researchers in science and engineering. The book avoids complex mathematical formulae, and hence the content is accessible to nontechnical readers. Useful summaries after each chapter provide compressed information for quick estimates of major parameters in planned or performed experiments. The book connects the basic physics of femtosecond laser-solid interactions to a broad range of applications. Throught the text, basic assumptions are derived from the first principles, and new results and ideas are presented. From such analyses, a qualitative and predictive framework for the field emerges, the impact of which on applications is also discussed.
