This book provides a unique historical and qualitative review of ten foreign automakers with plants in developed North America from their early beginnings to their export entry into North America. It seeks to expand the knowledge of American and Canadian policymakers pursuing a new foreign motor vehicle assembly plant or Foreign Direct Investment.

The difficulties in moving towards corporate sustainability raise the question of how environmental and social management can be integrated better with economic business goals. Over the last decade, the relationship between environmental and economic performance, and more recently the interaction between sustainability performance and business competitiveness, have received considerable attention in both theory and practice. However, to date, only partial aspects of the relationship between sustainability performance, competitiveness and economic performance have been studied from a theoretical as well as an empirical perspective. And, to date, no unique relationship has prevailed in empirical studies. A number of explanations have been put forward to explain this, including methodological reasons, such as the lack of statistical data, the low quality of that data, or the fact that such data is often available for short time periods only. Other theoretical explanations have been developed, such as the influence of different corporate strategies or the relatively small influence of environmental or sustainability issues as one factor among many on the economic or financial success of firms. So, how should the business case for sustainability be managed? This is the starting point for this book, which compiles insights on a large number of aspects of the link between sustainability performance, business competitiveness and economic success in an attempt to provide a comprehensive and structured view of this relationship. The book provides an unrivalled body of knowledge on the state of theory and practice in this field and identifies prospective future fields of work. The book includes: conceptual frameworks for the interaction of social, environmental and economic issues in business environments; case studies of companies that have successfully integrated social, environmental and economic issues; analyses of the causal and empirical relationship between environmental and/or social performance, business performance and firm-level competitiveness; concepts and tools useful for improving business value with proactive operational strategies; assessment of the factors influencing operational sustainability strategies and their economic impact; and comparisons of interactions between sustainability performance and firm competitiveness across industry sectors and countries. Managing the Business Case for Sustainability is the definitive work in its field: the most comprehensive book yet published on the theory and practice of managing sustainability performance, competitiveness, environmental, social and economic performance in an integrated way. It will be essential reading for managers, academics, consultants, fund managers, governments and government agencies, NGOs and international bodies who need a broad and comprehensive overview of the business case for sustainability.

When the war ended on August 15, 1945, I was a naval engineering cadet at the Kure Navy Yard near Hiroshima, Japan. A week later, I was demobilized and returned to my home in Tokyo, fortunate not to find it ravaged by firebombing. At the beginning of September, a large contingent of the American occupation forces led by General Douglas MacArthur moved its base from Yokohama to Tokyo. Near my home I watched a procession of American military motor vehicles snaking along Highway 1. This truly awe-inspiring cavalcade included jeeps, two-and-a-half-ton trucks, and enormous trailers mounted with tanks and artillery. At the time, I was a 21-year-old student in the Machinery Section of Engineering at the Tokyo Imperial University. Watching that magnificent parade of military vehicles, I was more than impressed by the gap in industrial strength between Japan and the U. S. That realization led me to devote my whole life to the development of the Japanese auto industry. I wrote a small article concerning this incident in Nikkei Sangyo Shimbun (one of the leading business newspapers in Japan) on May 2, 1983. The English translation of this story was carried in the July 3, 1983 edition of the Topeka Capital-Journal and the September 13, 1983 issue of the Asian Wall Street Journal. The Topeka Capital-Journal headline read, "MacArthur's Jeeps Were the Toyota Catalyst.

Underpinned by extensive research, Manufacturing the Future highlights and reconfirms the importance of manufacturing strategy as part of the overall business strategy ? shows firms how to radically re-appraise the way they are organised, including the role of manufacturing personnel ? describes the importance of the role of senior manufacturing personnel to the business ? shows how to successfully apply manufacturing strategies, which feed into and form part of the overall success of the business strategy ? shows both why and how manufacturing firms need to move away from traditional, unsuccessful approaches to become an enlightened successful outfit.
