

Training Obstetrics Gynaecology Essential Curriculum Oxford

Thank you very much for reading training obstetrics gynaecology essential curriculum oxford. As you may know, people have search numerous times for their chosen readings like this training obstetrics gynaecology essential curriculum oxford, but end up in malicious downloads. Rather than enjoying a good book with a cup of tea in the afternoon, instead they are facing with some malicious bugs inside their computer.

training obstetrics gynaecology essential curriculum oxford is available in our digital library an online access to it is set as public so you can get it instantly. Our book servers hosts in multiple locations, allowing you to get the most less latency time to download any of our books like this one. Merely said, the training obstetrics gynaecology essential curriculum oxford is universally compatible with any devices to read

'Training in Obstetrics and Gynaecology' provides a comprehensive textbook for speciality trainees in the field. Using an attractive, highly illustrated double-spread layout it follows the curricula and ethos for the Foundation Years and Membership Examination of the Royal College of Obstetricians and Gynaecologists (MRCOG).

Get Through MRCOG Part 1, Second Edition, provides a selection of questions covering the basic and applied sciences relevant to the clinical practice of obstetrics and gynaecology and mapped to the RCOG Knowledge Areas in the MCQ style. With appropriate explanations of the answers and references to the relevant guidelines, this is a definitive resource for those taking the MRCOG Part 1 examination.

"INTRODUCTION In the last decade, competency-based medical education (CBME) has become the predominant teaching method used in residency training, preparing young physicians to become competent graduates. Due to new challenges in the 21st century, such as work hour reforms, increased breadth of knowledge required, new technology, and increased awareness of patient safety, CBME has supplemented the historical Apprenticeship and Halstedian models of medical education. It focuses on outcomes (attainment of competencies), and promotes active learning, requiring more frequent observations and assessments of learners. Simulation represents a valuable tool in the era of CBME as it allows for both teaching and assessments to take place and promotes deliberate practice: all in a safe and controlled environment with no consequences for patients. The role of CBME and simulation in the speciality of Obstetrics and Gynecology (OB/GYN) will be further explored within three manuscripts, with the goal of helping to define a national competency-based simulation training curriculum for OB/GYN residents: METHODS First, a comprehensive review of literature was undertaken to compare curricula from five countries, on an international level, including Canada. Second, a list of entrustable professional activities (EPAs) for OB/GYN was defined via a Delphi consensus method. Each EPA was quantified for its importance in residency training and for simulation in addition to setting benchmarks. Third, the role of simulation in OB/GYN, including its current use and effectiveness, was further elaborated via a systematic review on the subject.RESULTS Five countries recognized CBME as a valuable tool in medical education, but there remains a need to develop more assessment tools, including the use of simulation. The review of curricula allowed for item analysis to take place, which yielded 15 EPAs for OB/GYN. Although it was clear for experts surveyed that all outlined EPAs were important/essential and that there is a stepwise increase in competence, based on stage of residency, the role that simulation plays remained uncertain. However, the systematic review, which yielded 316 eligible studies, highlighted that simulation does in fact play a very important role in OB/GYN residency training and that both its use and the number of high-quality studies involving simulation has been increasing over the years. CONCLUSION The introduction of "Competence by Design" in 2019 within Canadian residency training programs has increased the need for more adequate teaching and assessment tools in order to ensure that all graduating residents are ready for practice. This thesis demonstrated that simulation plays an integral role in filling this gap, with many studies showing that it increases assessed knowledge and skills which then translate to the workplace. Thus, a national competency-based simulation training curriculum for OB/GYN residents, has the potential to increase the quality of training and patient care"--

First Prize, BMA Medical Book Awards 2013The Medicine on the Move series provides fully flexible access to subjects across the curriculum in a unique combination of print and mobile formats ideal for the busy medical student and junior doctor. No matter what your learning style, whether you are studying a subject for the first time or revisiting it

Get Through MRCOG Part 1, Second Edition, provides a selection of questions covering the basic and applied sciences relevant to the clinical practice of obstetrics and gynaecology and mapped to the RCOG Knowledge Areas in the MCQ style. With appropriate explanations of the answers and references to the relevant guidelines, this is a definitive resource for those taking the MRCOG Part 1 examination.

Crash Course - your effective every-day study companion PLUS the perfect antidote for exam stress! Save time and be assured you have the essential information you need in one place to excel on your course and achieve exam success. A winning formula now for over 20 years, each series volume has been fine-tuned and fully updated - with an improved full-colour layout tailored to make your life easier. Especially written by senior students or junior doctors - those who understand what is essential for exam success - with all information thoroughly checked and quality assured by expert Faculty Advisers, the result are books which exactly meet your needs and you know you can trust. Each chapter guides you succinctly through the full range of curriculum topics, integrating clinical considerations with the relevant basic science and avoiding unnecessary or confusing detail. A range of text boxes help you get to the hints, tips and key points you need fast! A fully revised self-assessment section matching the latest exam formats is included to check your understanding and aid exam preparation. The accompanying enhanced, downloadable eBook completes this invaluable learning package. Series volumes have been honed to meet the requirements of today's medical students, although the range of other health students and professionals who need rapid access to the essentials of obstetrics and gynaecology will also love the unique approach of Crash Course. Whether you need to get out of a fix or aim for a distinction Crash Course is for you! Provides the exam syllabus in one place - saves valuable revision time Written by senior students and recent graduates - those closest to what is essential for exam success Quality assured by leading Faculty Advisors - ensures complete accuracy of information Features the ever popular 'Hints and Tips' boxes and other useful aide-m\u00e9moires - distilled wisdom from those in the know Updated self-assessment section matching the latest exam formats - confirm your understanding and improve exam technique fast

In his 35 years of teaching medical students and trainees Professor Gabor Kovacs, International Medical Director of Monash IVF, has devised a system of lectures which cover the entire core curriculum in Obstetrics and Gynaecology. The principle behind these lectures is to help the student understand various aspects of the speciality, rather than simply learning the key topics, and encourages ongoing problem solving as well as a more logical approach. Each of the lectures have been based around highly informative diagrams and tables, and each syndrome follows a set template making each topic very understandable and easy to assimilate. This will be an invaluable text for medical students, nursing and midwifery students, trainees in obstetrics and gynaecology as well as sexual and reproductive health, general and nurse practitioners.

Training in Surgery is the first title in a new series aimed at postgraduate trainees. Using an attractive, highly illustrated double-spread layout it follows the Intercollegiate Surgical Curriculum Project and reflects the new surgical speciality training curriculum in a clear and concise style.

The complete guide to speciality training in paediatrics. Designed in conjunction with the syllabus and structure of the MRCPCH exams
