Few countries, if any, are as threatened by climate change as one of the world's most unique nations u[ⓘ] Tuvalu. DS has been active in Tuvalu since 2010 working on the question of climate displacement and related housing, land and property rights questions.

The first book to comprehensively assess anthropology's engagement with climate change, this pioneering volume both maps out exciting trajectories for research and issues a call to action. Chapters in part one are systematic research reviews, covering the relationship between culture and climate from prehistoric times to the present; changing anthropological discourse on climate and environment; the diversity of environmental and sociocultural changes currently occurring around the globe; and the unique methodological and epistemological tools anthropologists bring to bear on climate research. Part two includes a series of case studies that highlights leading-edge research,including some unexpected and provocative findings. Part three challenges scholars to be proactive on the front lines of climate change, providing instruction on how to work in with research communities, with innovative forms of communication, in higher education, in policy environments, as individuals, and in other critical arenas. Linking sophisticated knowledge to effective actions, Anthropology and Climate Change is essential for students and scholars in anthropology and environmental studies.

'Climate Change and Indigenous Peoples offers the most comprehensive resource for advancing our understanding of one of the least coherently developed of climate change policy realms u[ⓘ] legal protection of vulnerable indigenous populations. The first part of the book provides a tremendously useful background on the cultural, policy, and legal context of indigenous peoples, with special emphasis on developing general principles for climate change mitigation and adaptation solutions. The remainder of the volume then carefully and thoroughly works through how those general principles play out for different regional indigenous populations around the globe. All of the contributions to the volume are by leading experts who bring their insights and innovative thinking to bear on a truly complex subject. Whether as a novice's starting point or expert's desktop reference, I cannot think of a more useful resource for anyone interested in climate policy for indigenous peoples"; J.B.Ruhi., Vanderbilt University Law School, US "In Climate Change and Indigenous Peoples, editors Nancy Abate and Elizabeth Kronk have assembled a truly comprehensive and informative look at the special issues that indigenous peoples face as a result of climate impacts and an overview of the law i[ⓘ] international and domestic. climate change and human rights, substantive and procedural ![ⓘ] that applies to those issues. One of the great strengths of the book is that no group of indigenous people is made to stand proxy for all the others; instead, after exploring the general issues facing all indigenous peoples and the general legal strategies they use, the book focuses most of its attention on the specific climate change issues that confront particular groups ![ⓘ] South American indigenous peoples; the various tribes of Native Americans in the US; the indigenous peoples of the Arctic, collectively as well as in respect to particular Arctic countries; Pacific Islanders; indigenous peoples in Asia; the various groups of Aborigines and Torres Islanders in Australia; the Maori on New Zealand; and several tribes in Kenya, Africa. For people interested in climate change and climate change adaptation, this book provides a unique overview of the special vulnerabilities and plights of indigenous peoples, issues that must be considered as the world works to formulate effective and protective climate change adaptation policies. For people interested in indigenous peoples and international human rights, this book paints a grim picture of the various ways in which climate change threatens this very diverse group of cultural entities and the deep knowledge of place that they usually possess, while at the same time offering hope that the law can find ways to keep them from disappearing ![ⓘ] and, indeed, that indigenous peoples might just help the rest of us to survive, as well." ![ⓘ] Robin Kundis Craig, University of Utah S.J. Quinney College of Law, US "It is one of the world's cruelest ironies that some of the earliest effects of climate change are being felt by indigenous populations around the world, even though they contributed no more than trivial amounts of the greenhouse gases that are at the root of much of the problem, and they are so politically and economically powerless that they played no role in the decisions that have led to their plight. At the same time, many of these populations are victimized by certain actions designed to reduce emissions, such as land clearing for biofuels cultivation, and restrictions on forest use. Professors Abate and Kronk have assembled a formidable collection of experts from around the world who demonstrate the diversity of challenges facing these indigenous peoples, and the opportunities and challenges in using various international and domestic legal tools to seek redress. This book will be an invaluable resource for all those examining the legal remedies that may be available, either now or as the law develops in the years to come." ![ⓘ] Michael B. Gerrard, Columbia Law School, US This timely volume explores the ways in which indigenous peoples across the world are challenged by climate change impacts, and discusses the legal resources available to confront those challenges. Indigenous peoples occupy a unique niche within the climate justice movement, as many indigenous communities live subsistence lifestyles that are severely disrupted by the effects of climate change. Additionally, in many parts of the world, domestic law is applied differently to indigenous peoples than it is to their non-indigenous peers, further complicating the quest for legal remedies. The contributors to this book bring a range of expert legal perspectives to this complex discussion, offering both a comprehensive explanation of climate change-related problems faced by indigenous communities and a breakdown of various real world attempts to devise workable legal solutions. Regions covered include North and South America (Brazil, Canada, the US and the Arctic), the Pacific Islands (Fiji, Tuvalu and the Federated States of Micronesia), Australia and New Zealand, Asia (China and Nepal) and Africa (Kenya). This comprehensive volume will appeal to professors and students of environmental law, indigenous law and international law, as well as practitioners and policymakers with an interest in indigenous legal issues and environmental justice.

Cambridge, UK : Cambridge University Press, 1998.

This edited volume explores the circumstances under which vulnerable communities can better adapt to climate and environmental change, and focuses in particular on the centrality of migration as a resilience and adaptation strategy for communities at risk. The book features important case studies where migration is being used as a risk management strategy in the Pacific, Sub-Saharan Africa, Latin America, and Europe. Its comparative analysis reveals common patterns in enhancing local resilience through migration across diverse regional, socio-economic, cultural, and political contexts. This book is a contribution to the global discussion about the future of migration policy, especially as climate and environmental change is expected to grow as one of the most pressing challenges of our time.

Since 2009 there has been a fundamental shift in the way that the Pacific Island states engage with regional and world politics. The region has experienced, what Kiribati President Anote Tong has aptly called, a [paradigm shift] in ideas about how Pacific diplomacy should be organised, and on what principles it should operate. Many leaders have called for a heightened Pacific voice in global affairs and a new commitment to establishing Pacific Island control of this diplomatic process. This change in thinking has been expressed in the establishment of new channels and arenas for Pacific diplomacy at the regional and global levels and new ways of connecting the two levels through active use of intermediate diplomatic associations. The New Pacific Diplomacy brings together a range of analyses and perspectives on these dramatic new developments in Pacific diplomacy at sub-regional, regional and global levels, and in the key sectors of global negotiation for Pacific states ![ⓘ] fisheries, climate change, decolonisation, and trade.

The SAGE International Encyclopedia of Mass Media and Society discusses media around the world in their varied forms/newspapers, magazines, radio, television, film, books, music, websites, social media, mobile media!and describes the role of each in both mirroring and shaping society. This encyclopedia provides a thorough overview of media within social and cultural contexts, exploring the development of the mediated communication industry, mediated communication regulations, and societal interactions and effects. This reference work will look at issues such as free expression and government regulation of media; how people choose what media to watch, listen to, and read; and how the influence of those who control media organizations may be changing as new media empower previously unheard voices. The role of media in society will be explored from international, multidisciplinary perspectives via approximately 700 articles drawing on research from communication and media studies, sociology, anthropology, social psychology, politics, and business.
